

AccountsPRO Release 3.1

[18.09.2025]

Overview

AccountsPRO 3.1 is an incremental release focused on usability improvements, streamlined tenant and bank-data workflows, and strengthened reconciliation and journaling features. This release simplifies common accounting tasks by improving screens for tenant management, bank uploads, journal entries, and reconciliation while preserving auditability and data integrity.

Key takeaways: faster daily operations, clearer screens for non-technical users, safer password and tenant data handling, and improved support for bulk uploads (bank receipts and tenants).

Goals

- Make routine bookkeeping tasks quicker and easier for finance staff.
- Reduce data entry errors through guided screens and validations.
- Improve reconciliation and audit trails to save time at month-end.
- Support bulk uploads for tenants and bank receipts to reduce manual work.
- Keep the interface intuitive for users unfamiliar with accounting software.

Specifications

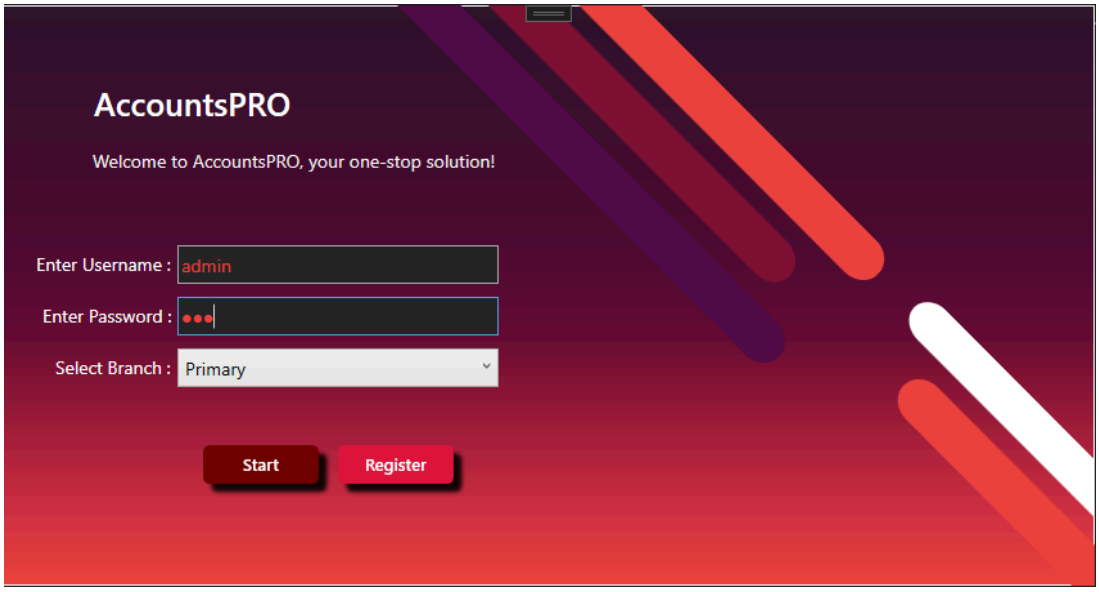

- Supported data imports: .XLSX(Excel), CSV for bank receipts and tenant uploads.
- Multi-tenant aware UI: tenant selection is persistent across screens.
- User roles & permissions: Admin, Accountant, Viewer (configurable in Admin Settings).
- Audit trail: Every create/update keeps a timestamped record with user ID.
- Security: Password update flows use current-password verification and minimum password complexity rules.
- Reconciliation: Date-based filtering and automatic matching suggestions for bank records.
- Platforms: Desktop-first responsive UI (Windows), optional web-enabled components for future releases.

AccountsPRO Start-Up Screen

This is the first screen users see after launching AccountsPRO.

What it does:

Presents product name, current release (3.1), and helpful launch actions (Open Dashboard, Admin Settings)

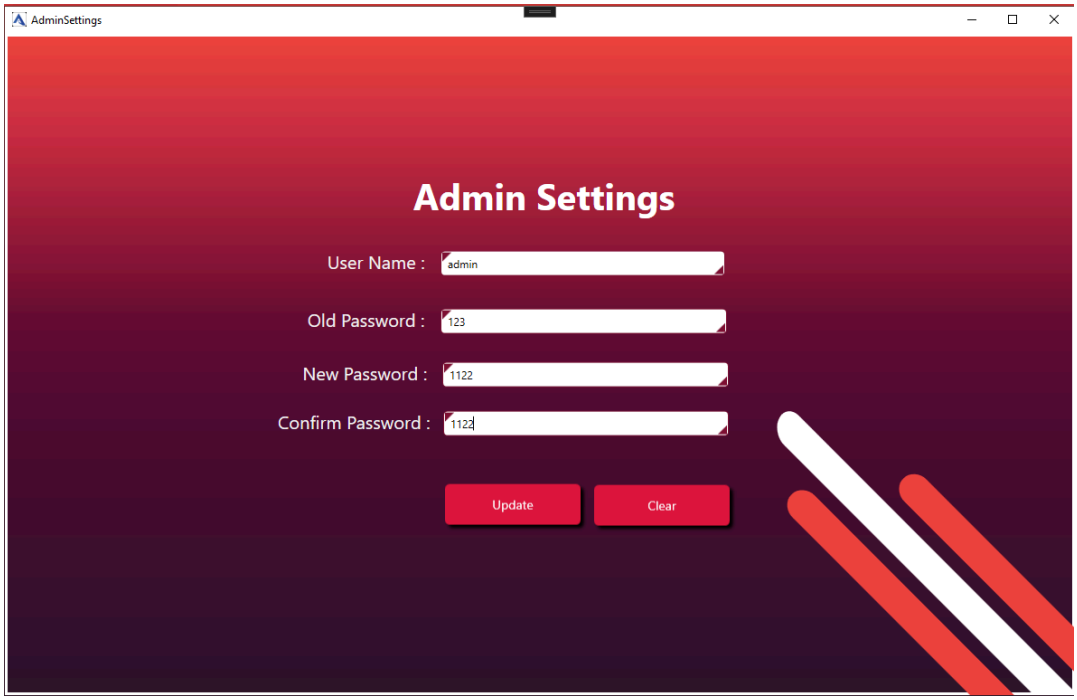

This screen gets your staff where they need to go immediately and shows important status items at-a-glance.

Admin Settings Screen

Central place for system administrators to configure users and system-wide settings.

What it does:

Allows managing user accounts, roles, tenant configuration, password policies, and system preferences such as date format and fiscal year settings.

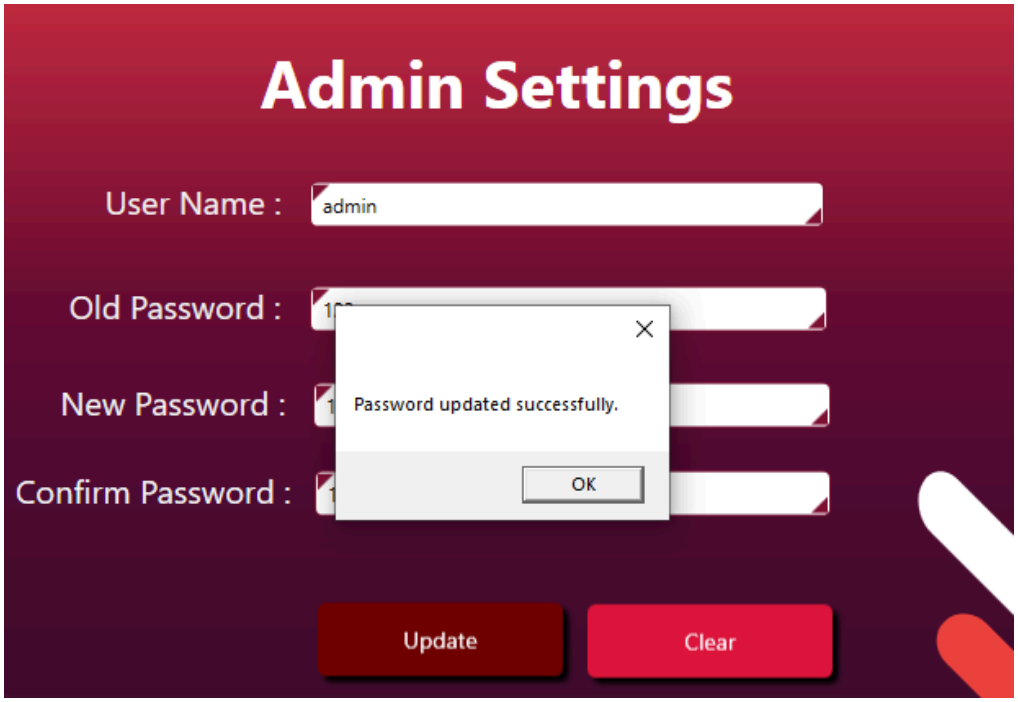

Admins can control access and tailor the system to your business rules from this single screen.

Admin Settings - Update Password

A focused flow for users to change their password securely.

What it does: Requires current password confirmation, enforces password rules (length, complexity), and shows success/failure messages. Password changes are logged for audit.

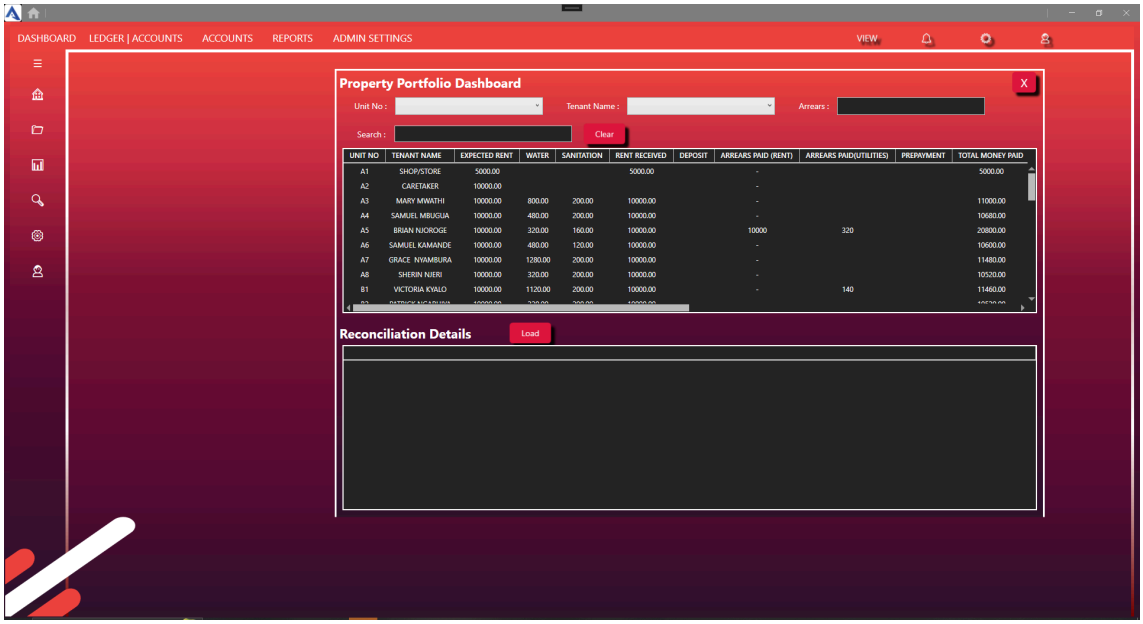

A secure and traceable way for users to update passwords without administrator intervention.

Dashboard Screen

Main workspace summarizing financial health and recent activity.

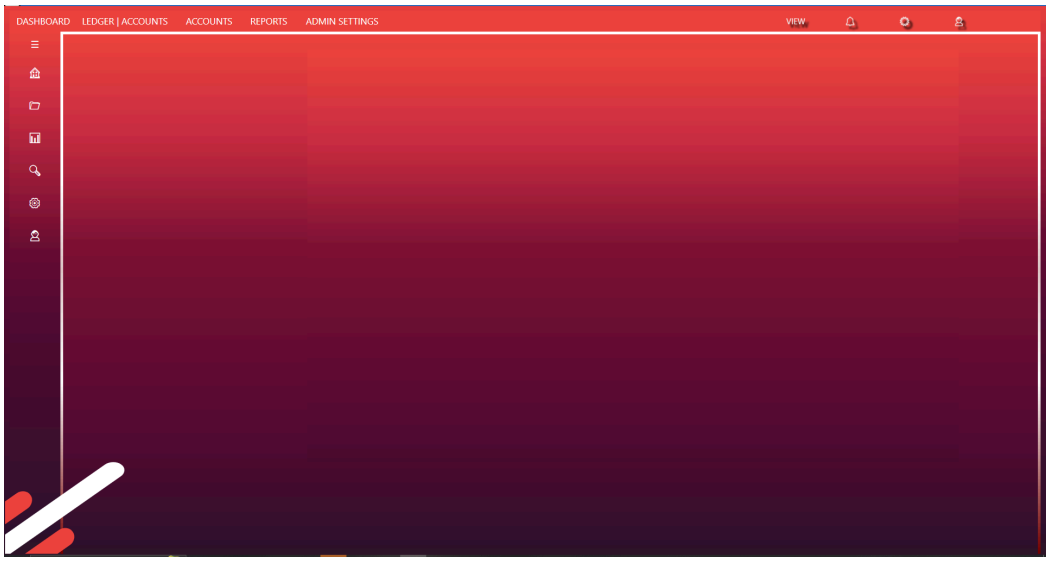

What it does:

Displays key KPIs (cash balance, outstanding receivables), a recent-transactions list, quick links (Create Journal, Bank Reconciliation), and visual widgets for pending approvals.

This is your single-pane view for daily decision-making and quickly accessing frequent tasks.

Dashboard Screen without the default Tenant Screen opened

ACCOUNTS SCREENS AVAILABLE IN ACCOUNTS DROP-DOWN MENU

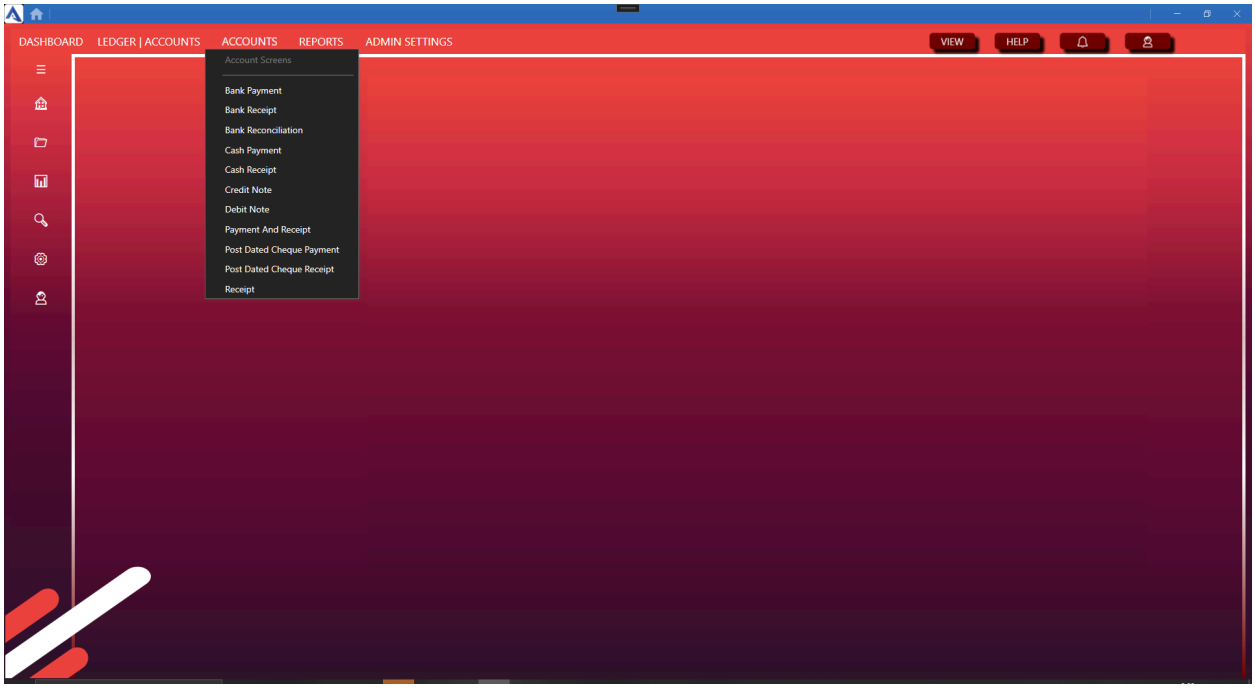

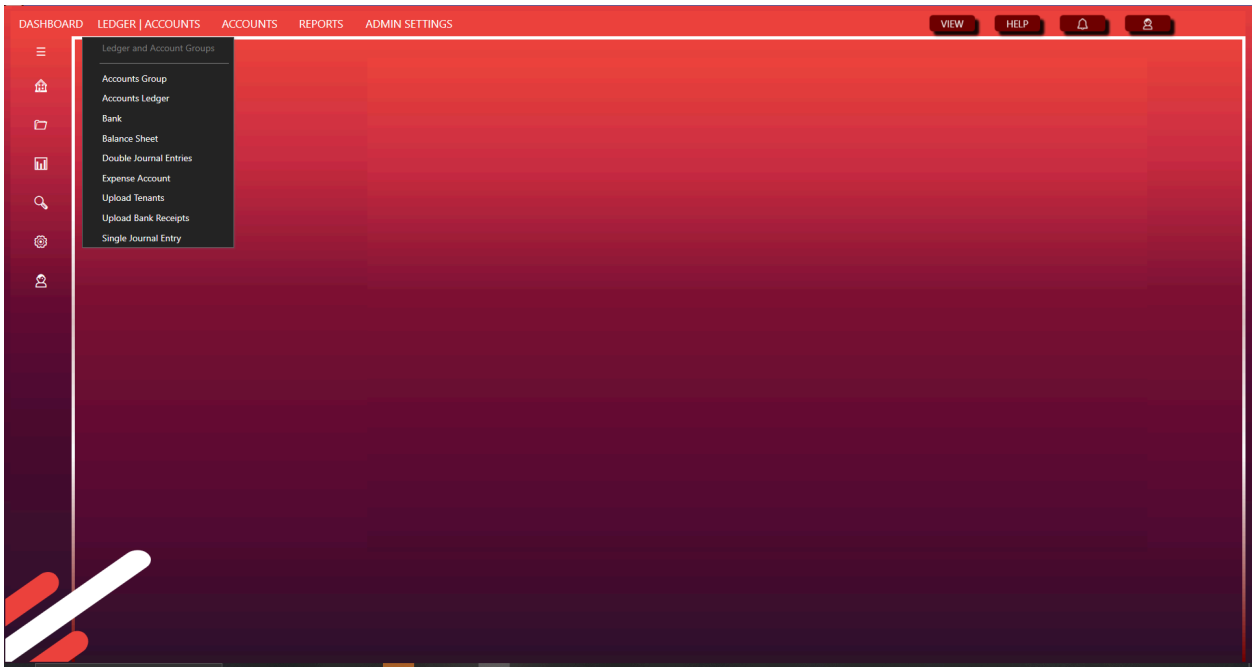

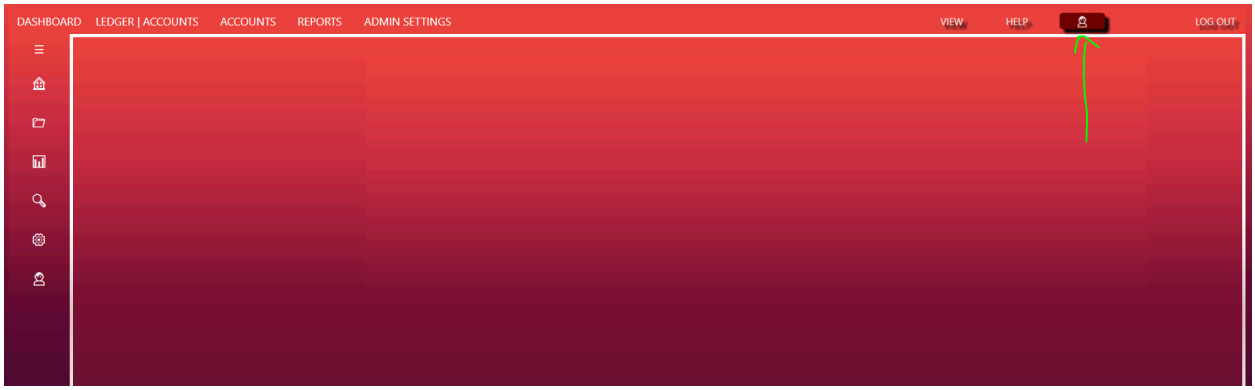

CHART OF ACCOUNTS AND LEDGER SCREENS AVAILABLE IN LEDGER / ACCOUNTS DROP-DOWN MENU

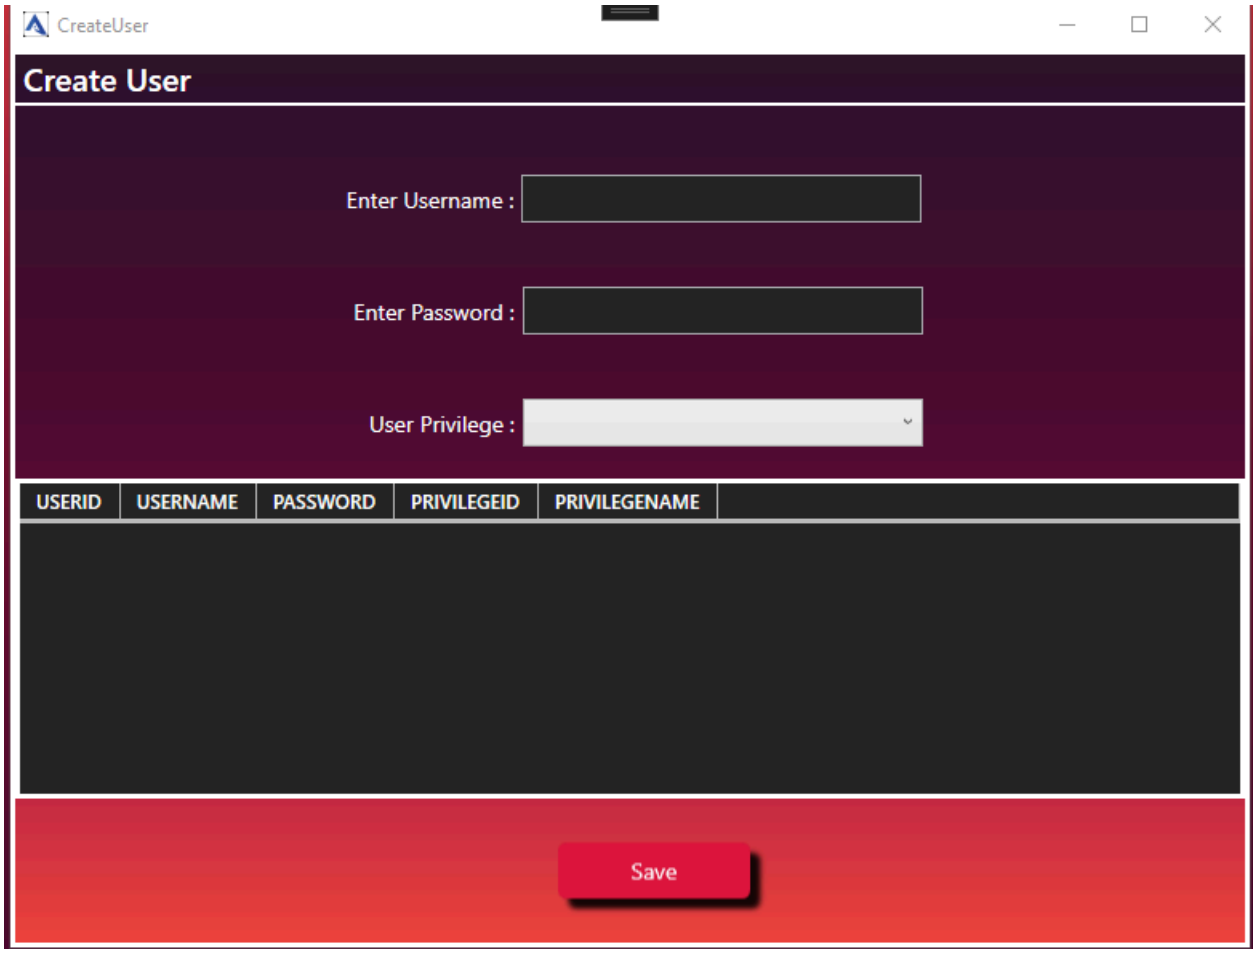

Create User

How to Locate Create User Option :

The user can easily create a new user here

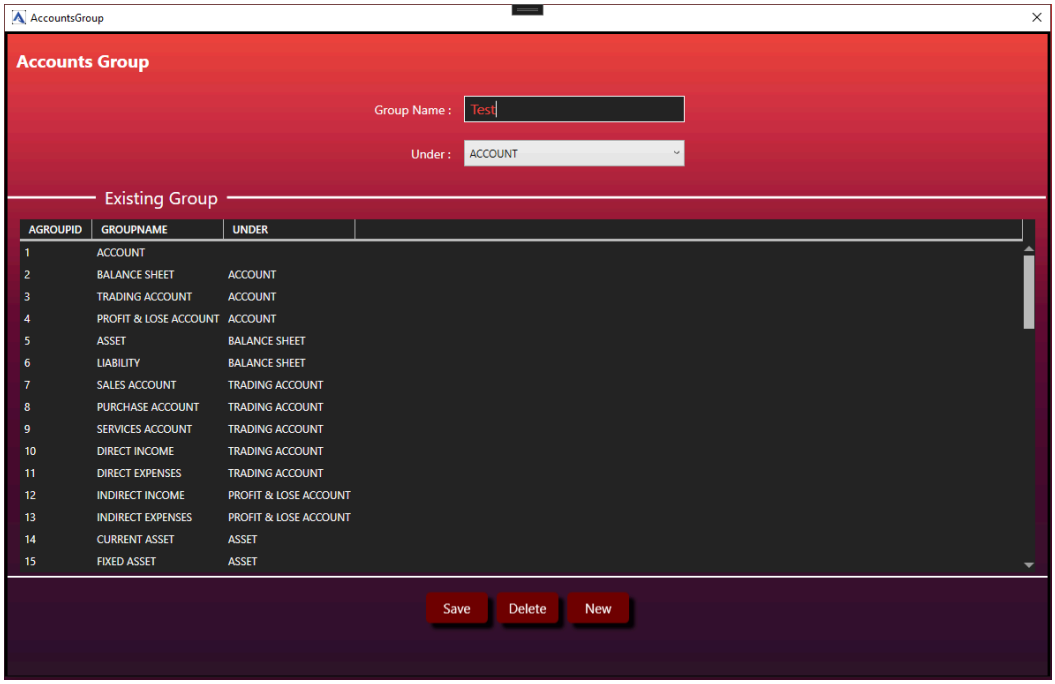

Accounts Group Screen Window

The detailed ledger view for a chosen account.

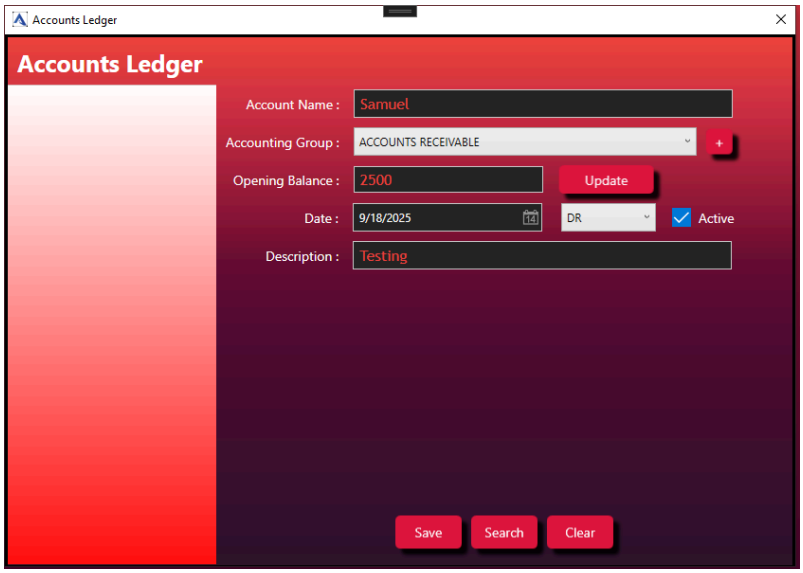

What it does:

Shows GroupId for traction, GroupName and Under which it falls.

Use this to investigate account activity and verify balances line-by-line.

Accounts Ledger Screen Window

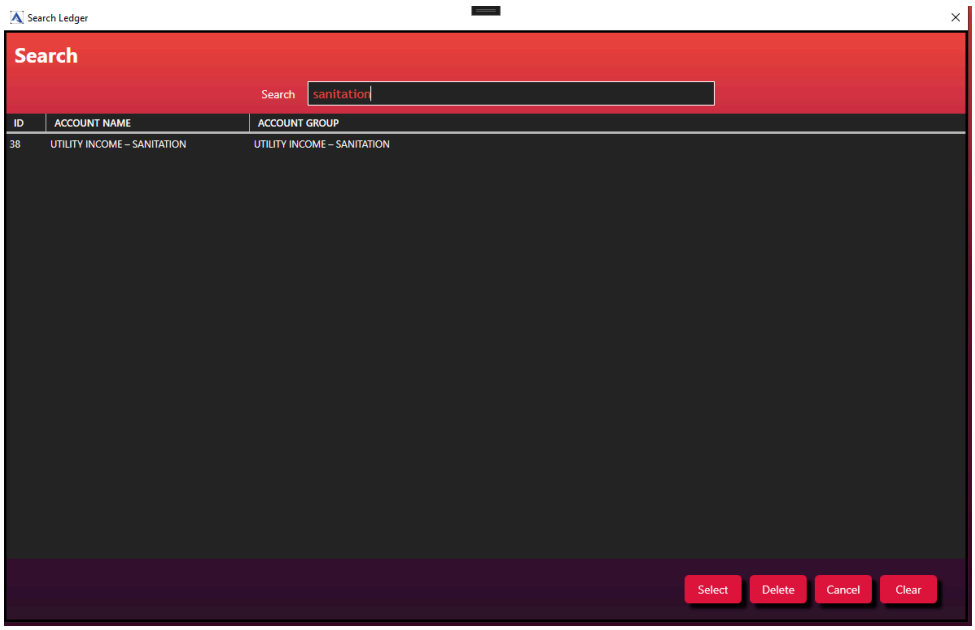

Search Ledger Screen Window

Quick search for ledger transactions across one or many accounts.

What it does:

Supports keyword searches (voucher no, description), date range filtering, and export of results to CSV for offline review.

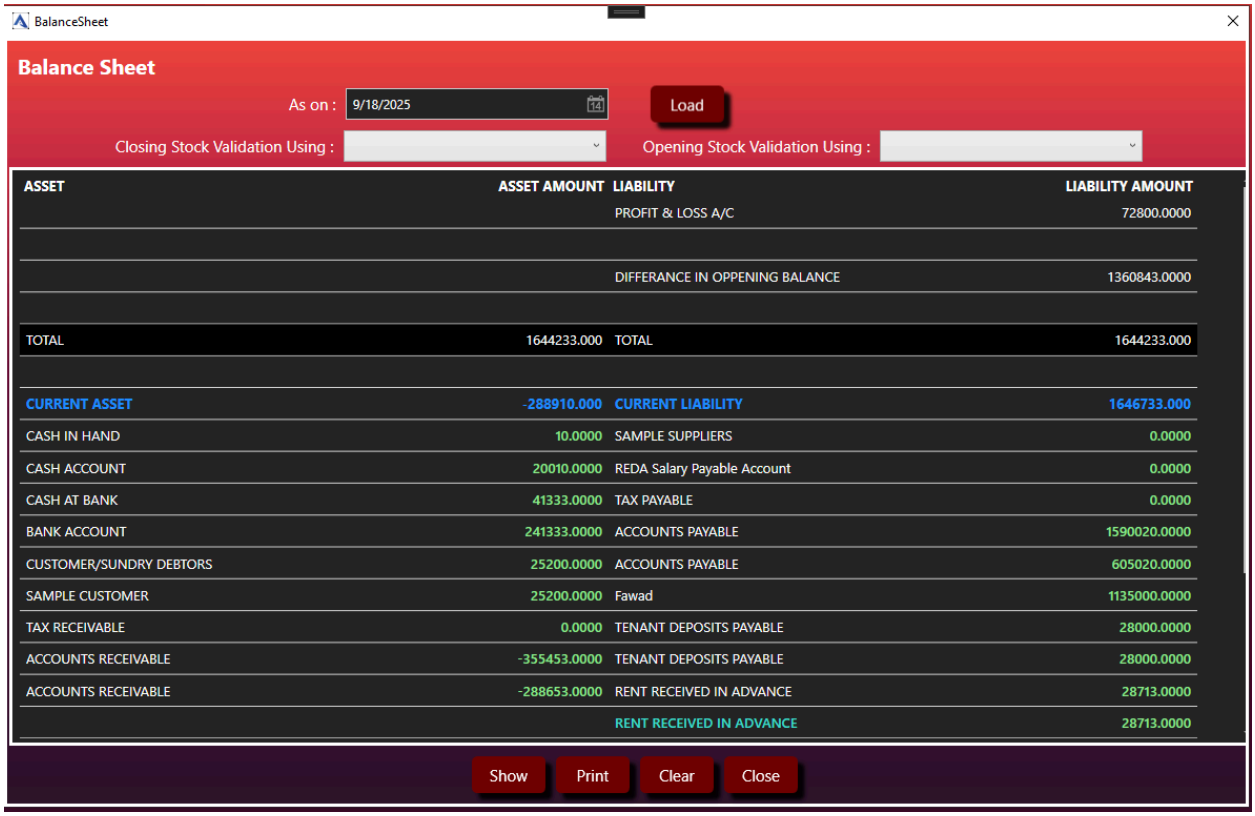

Use this to investigate account activity and verify balances line-by-line.

Balance Sheet Screen Window

Presents a snapshot of assets, liabilities, and equity for a selected date.

What it does:

Summarizes grouped totals and allows drill-down into group and ledger levels for validation.

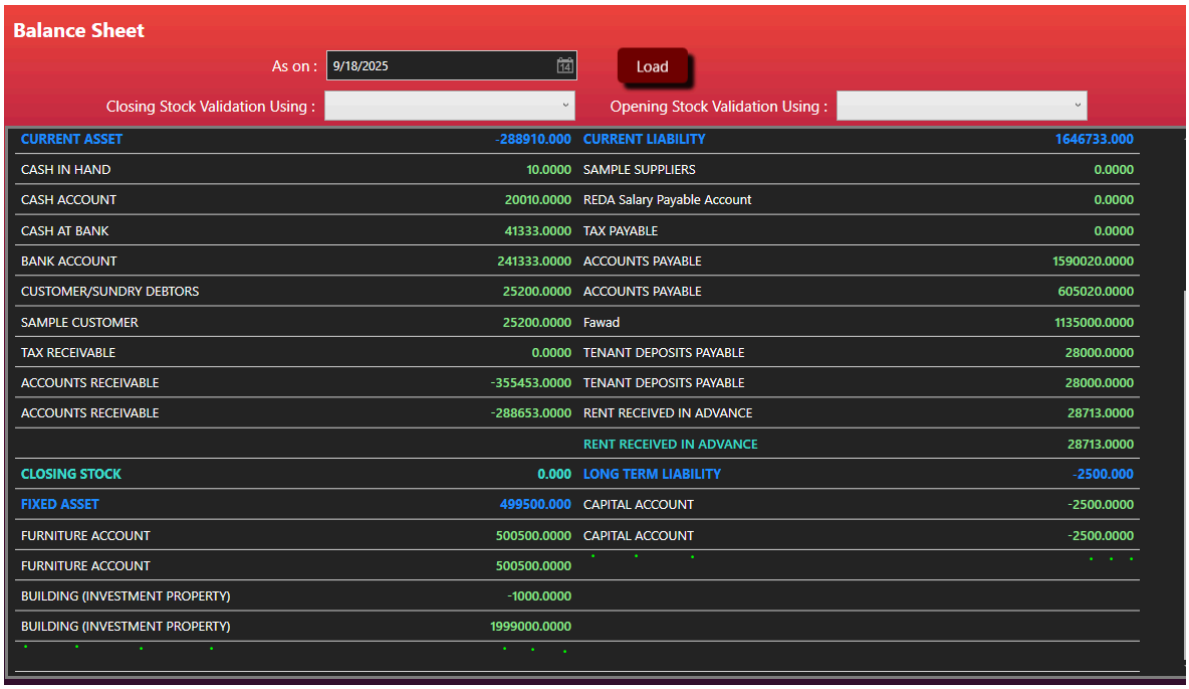

ASSET	ASSET AMOUNT	LIABILITY	LIABILITY AMOUNT
		PROFIT & LOSS A/C	72800.0000
		DIFFERANCE IN OPPENING BALANCE	1360843.0000

Bank Screen Window

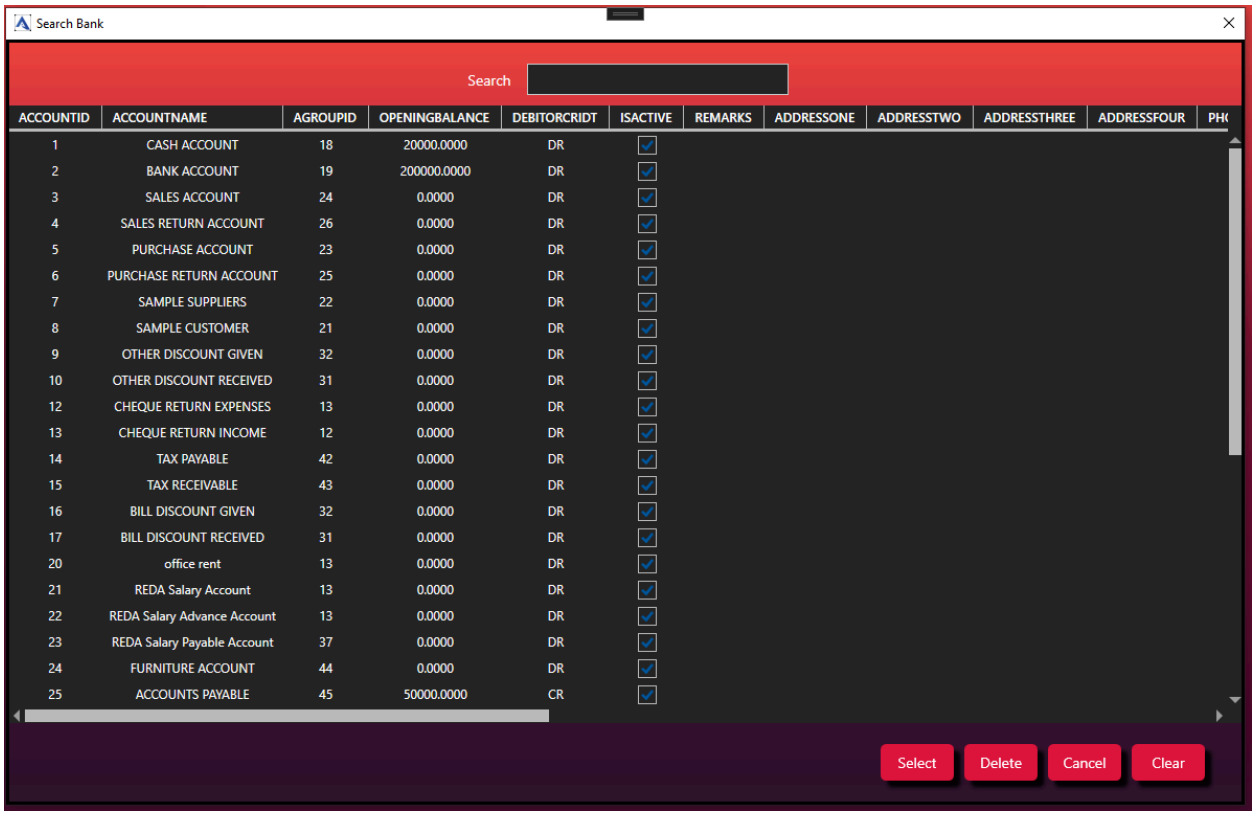

Search Bank Records Screen Window

Find specific bank transactions quickly.

What it does:

Search by cheque number, date, payee, or amount and view linked journal entries or attachments (like scanned receipts).

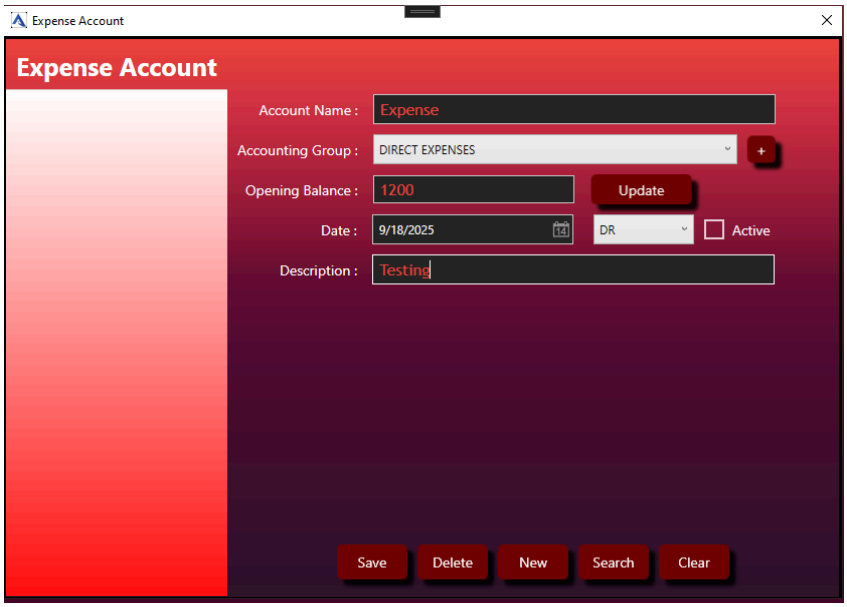

Locate bank transactions and associated documentation in seconds

Expense Account Screen Window

Manage expense-type ledger accounts and their settings.

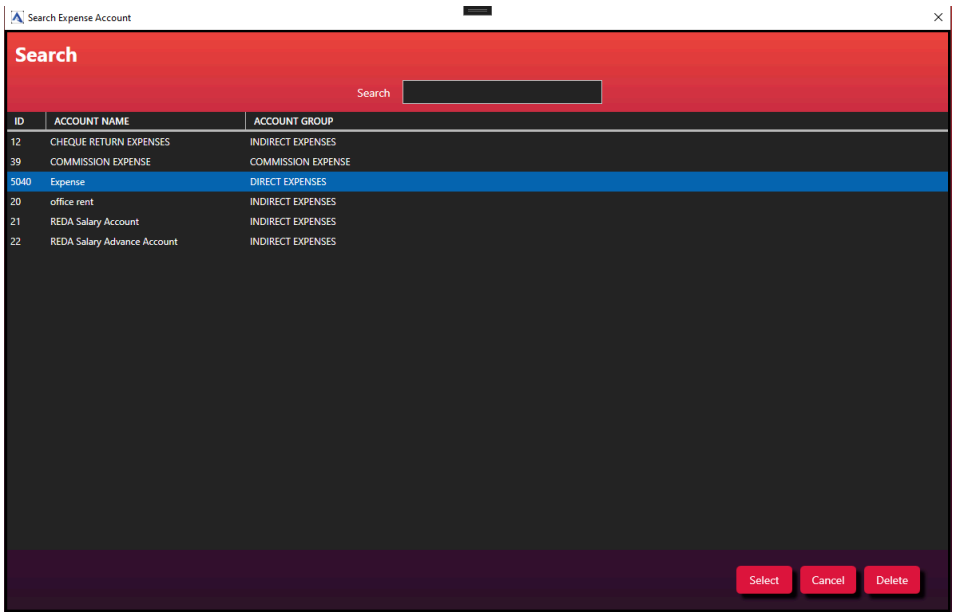

What it does: Create expense accounts, assign budgets, and set default tax/treatment for automated posting.

Set up expense categories to keep spending reports accurate and consistent.

Search Expense Accounts Screen Window

Quickly look up expense account details.

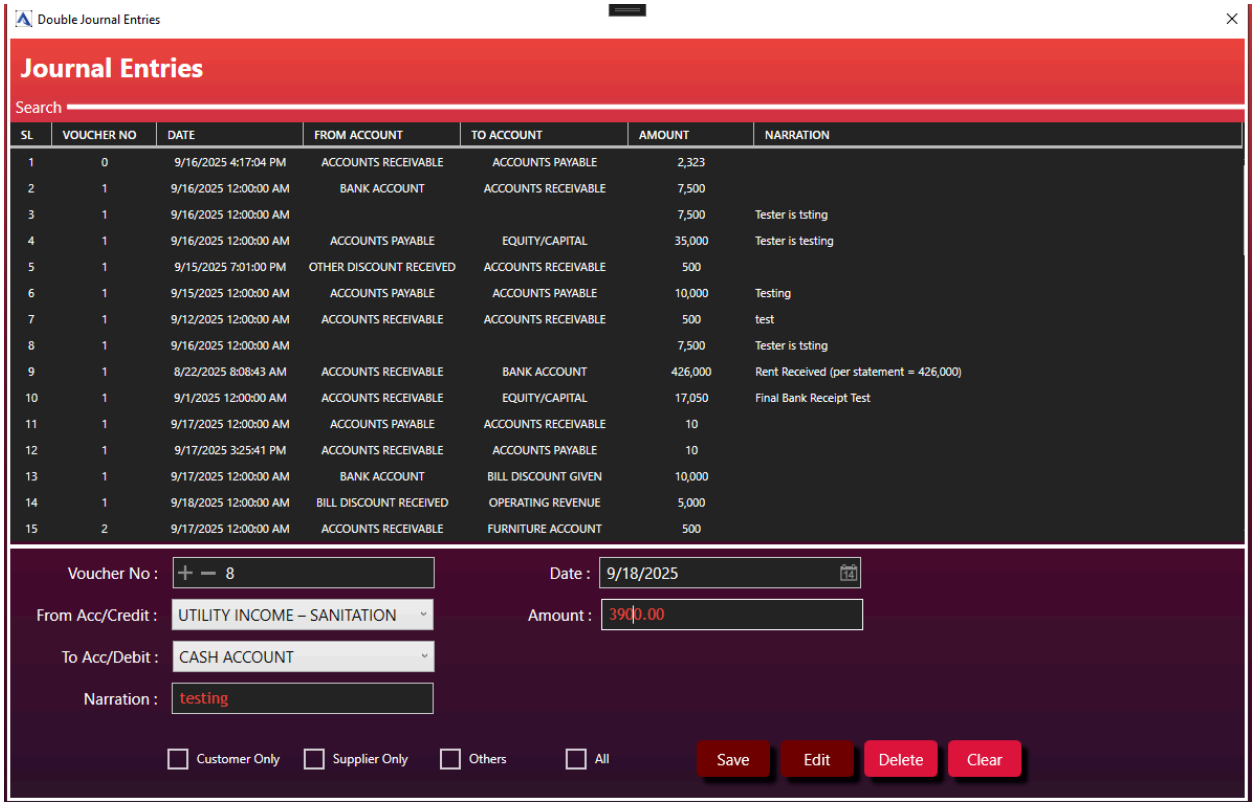

Journal Entries Screen Window

Bulk view of journal entries across the system.

What it does:

Lists draft and posted journals, supports status filtering, and allows actions such as Save, Edit, Delete, and Clear fields.

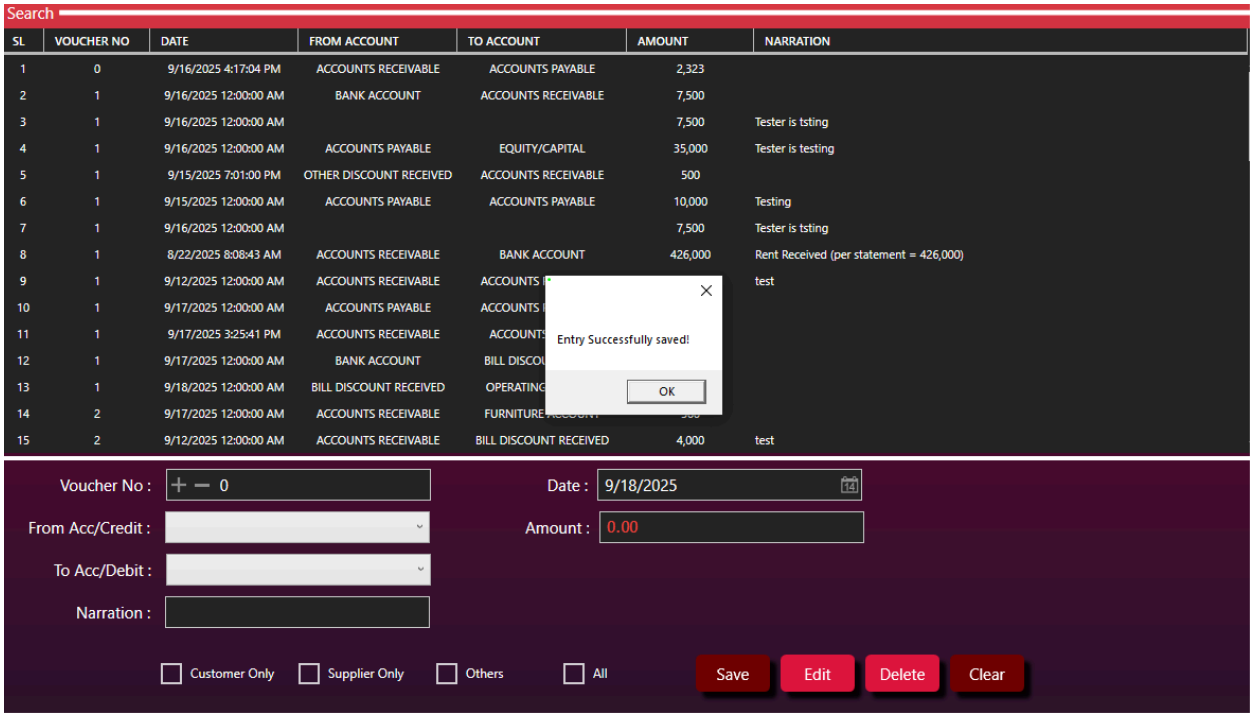

Track and manage journal entries centrally for month-end close

Saving Journal Entries

Process that shows how journals are validated and stored.

What it does:

Validates debits/credits, required fields, attachments, and then writes the posting to ledgers while recording an audit entry.

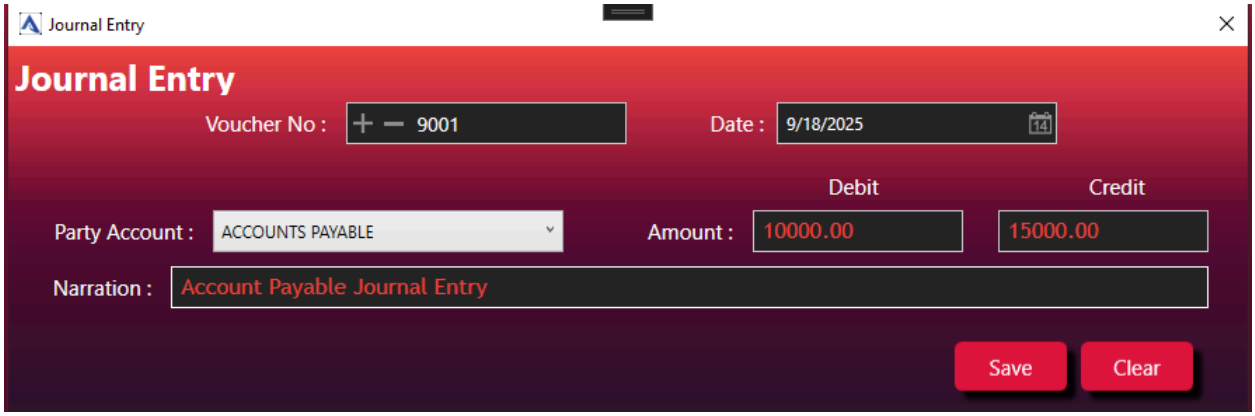

Ensures entries are balanced and traceable before they affect financial reports.

Single Journal Entry Screen Window

Create or edit one journal entry in detail.

What it does:

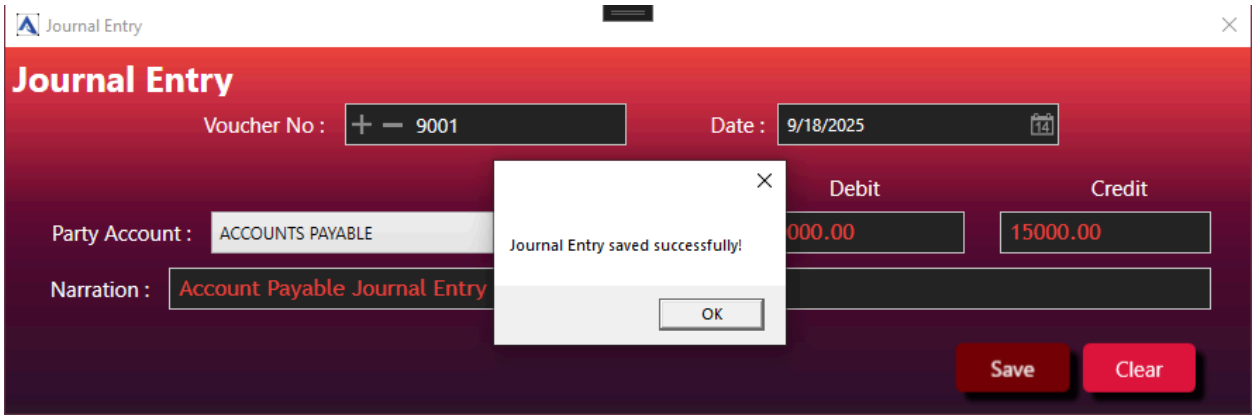

Capture debit/credit lines, narration

Use this for individual adjustments or corrections with clear context and evidence.

Saving Journal Entry Screen Window

Save your single journal entry

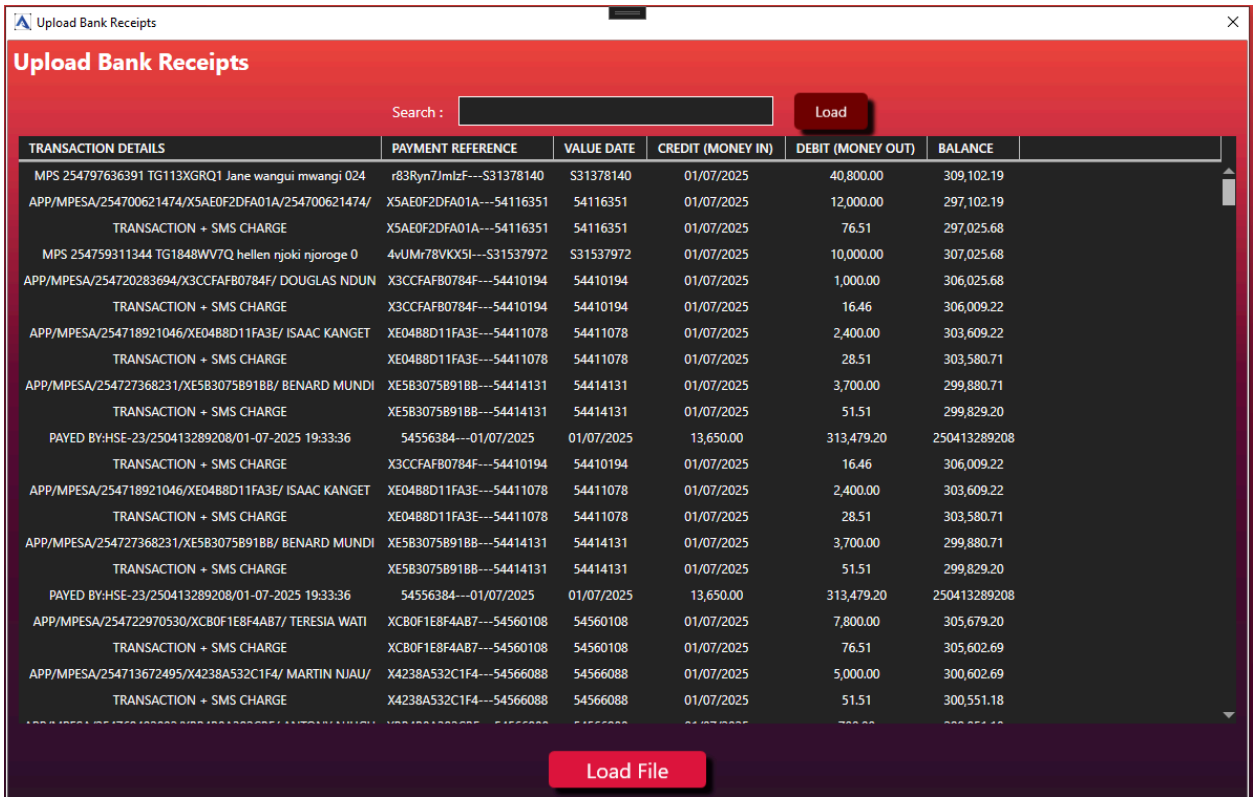

Upload Bank Receipts Screens Window

Bulk import tool for scanned bank receipts or CSV records.

What it does:

Guides the user through mapping file columns to system fields, previewing matched rows, and importing with error reporting for failed rows.

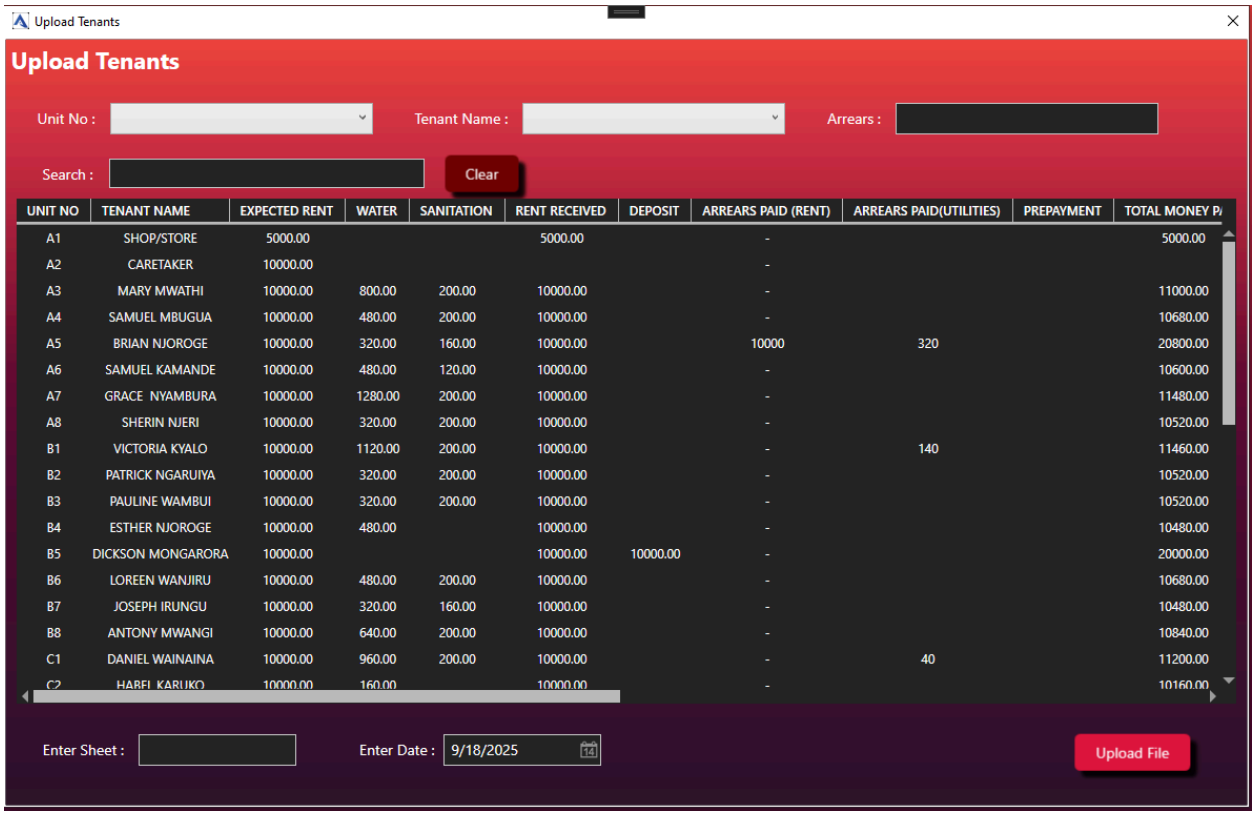

Bulk uploads speed up reconciliation work while keeping problematic rows visible for manual handling.

Upload Tenants Screen Window

Bulk import for tenant data (useful for property/tenant-focused customers).

What it does:

Accepts .XLSX(Excel) containing tenant details, maps fields (unit no, tenant name, expected rent, rent received, etc.), validates duplicates, and reports conflicts.

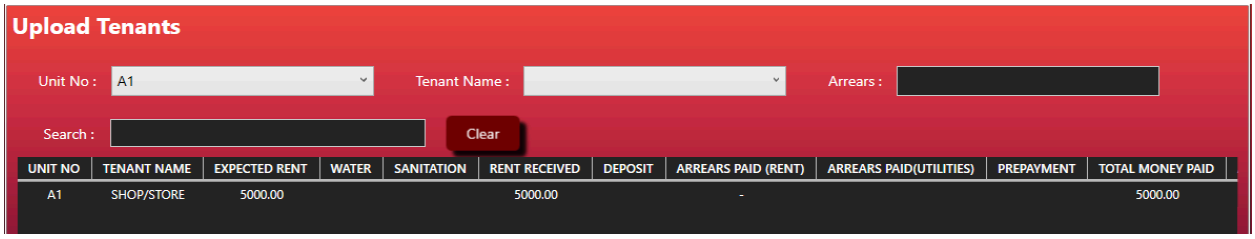

UNIT NO	TENANT NAME	EXPECTED RENT	WATER	SANITATION	RENT RECEIVED	DEPOSIT	ARREARS PAID (RENT)	ARREARS PAID(UTILITIES)	PREPAYMENT	TOTAL MONEY P
A1	SHOP/STORE	5000.00			5000.00		-			5000.00

B8	ANTONY MWANGI	10000.00	640.00	200.00	10000.00		-			10840.00
C1	DANIEL WAINAINA	10000.00	960.00	200.00	10000.00		-	40		11200.00
C2	HABEL KARUKO	10000.00	160.00		10000.00		-			10160.00

Populate tenant data quickly and reliably with clear validation feedback.

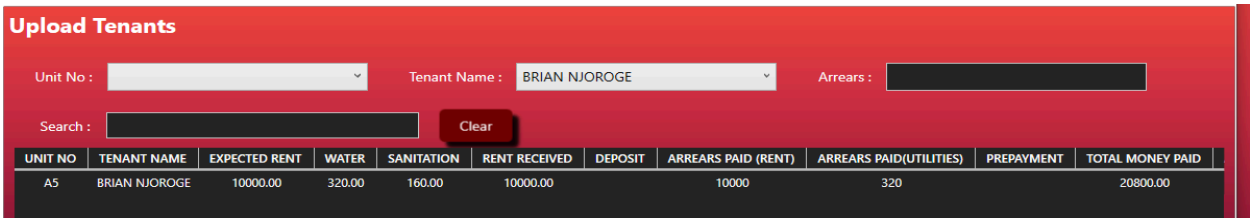

Search by **Unit No** in UploadTenants Screen Window

Find tenant records by unit number.

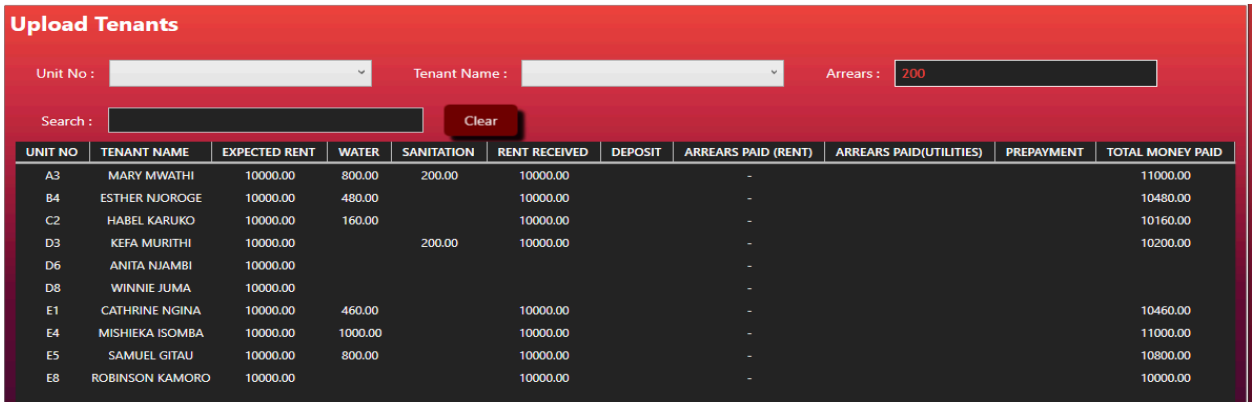

Search by **Name** in UploadTenants Screen Window

Locate tenants by their name in the uploaded file.

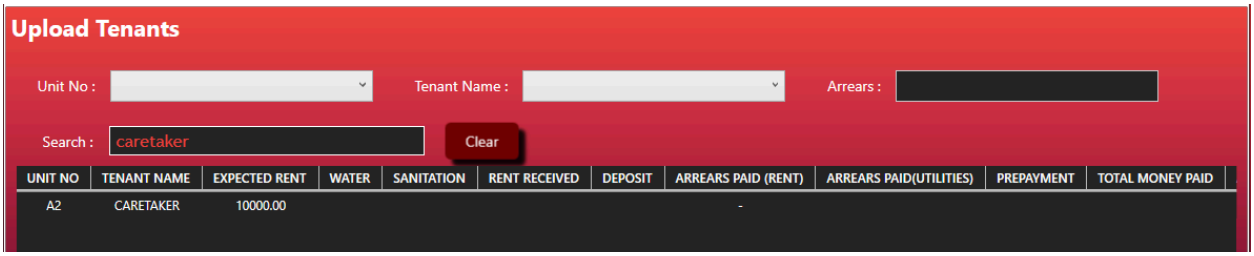

Search by **Arrears** in UploadTenants Screen Window

Identify tenants with outstanding balances.

Searching in UploadTenants Screen Window

General search and filter controls for tenant uploads.

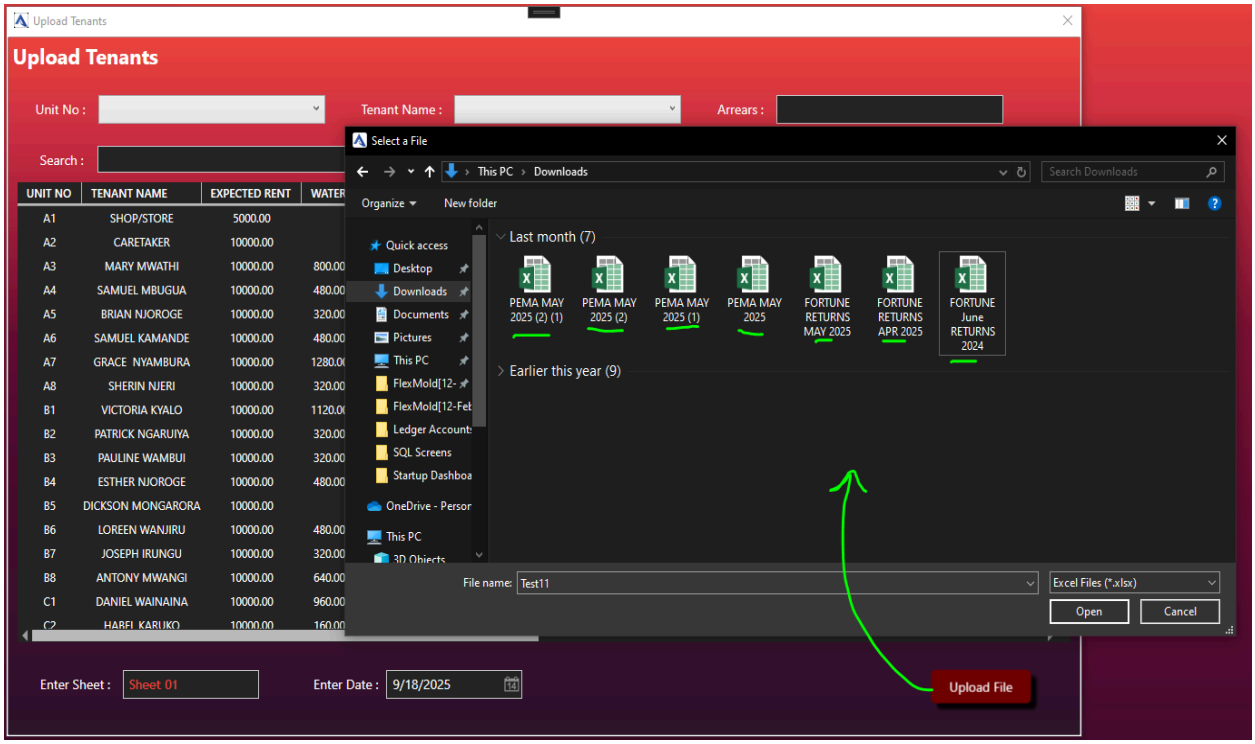

Uploading file in UploadTenants Screen Window

The final step of the tenant upload workflow.

What it does:

Shows a progress bar as the file uploads, validates each tenant row, highlights errors, and provides a downloadable error log for records that failed import. Successfully imported rows are added to the tenant database.

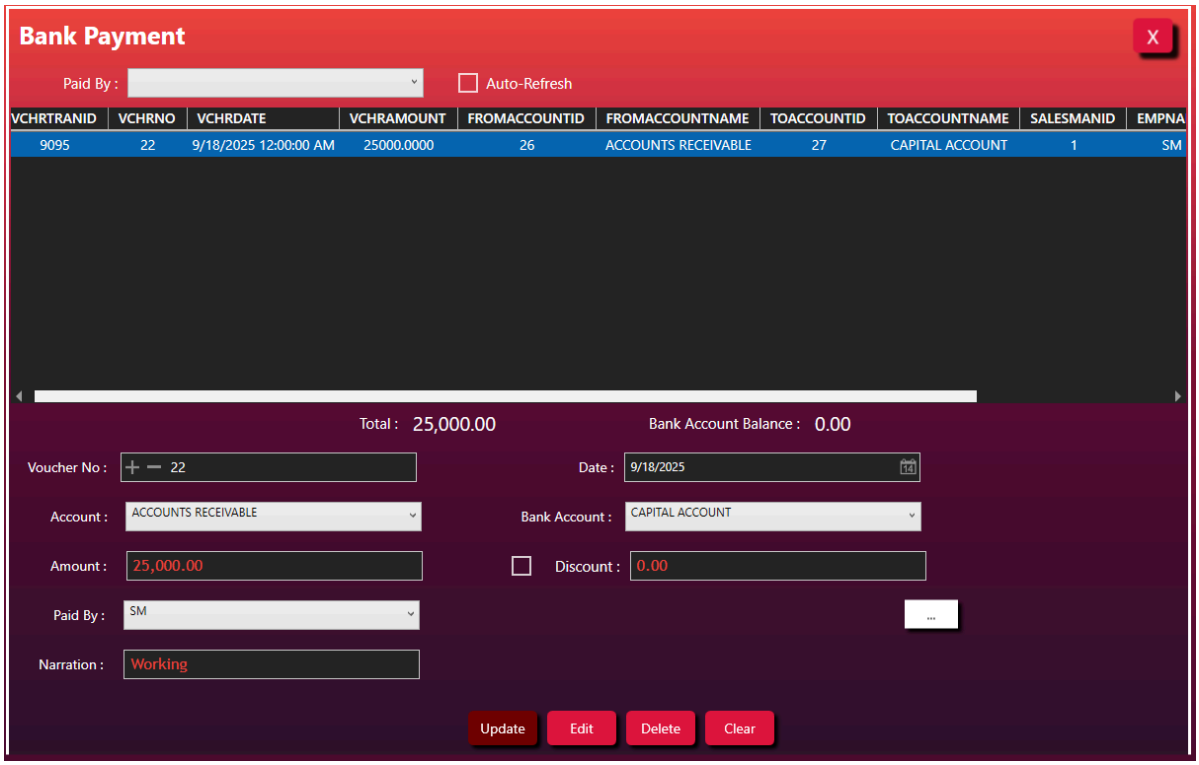

Gives clear visibility into which tenant records were successfully uploaded and which need correction, ensuring data integrity before usage.

Bank Payment Screen Window

Screen for making and recording outgoing payments.

What it does:
Allows users to record and track payments made, ensuring accurate financial records.
Helps maintain clear records of all payments in the system

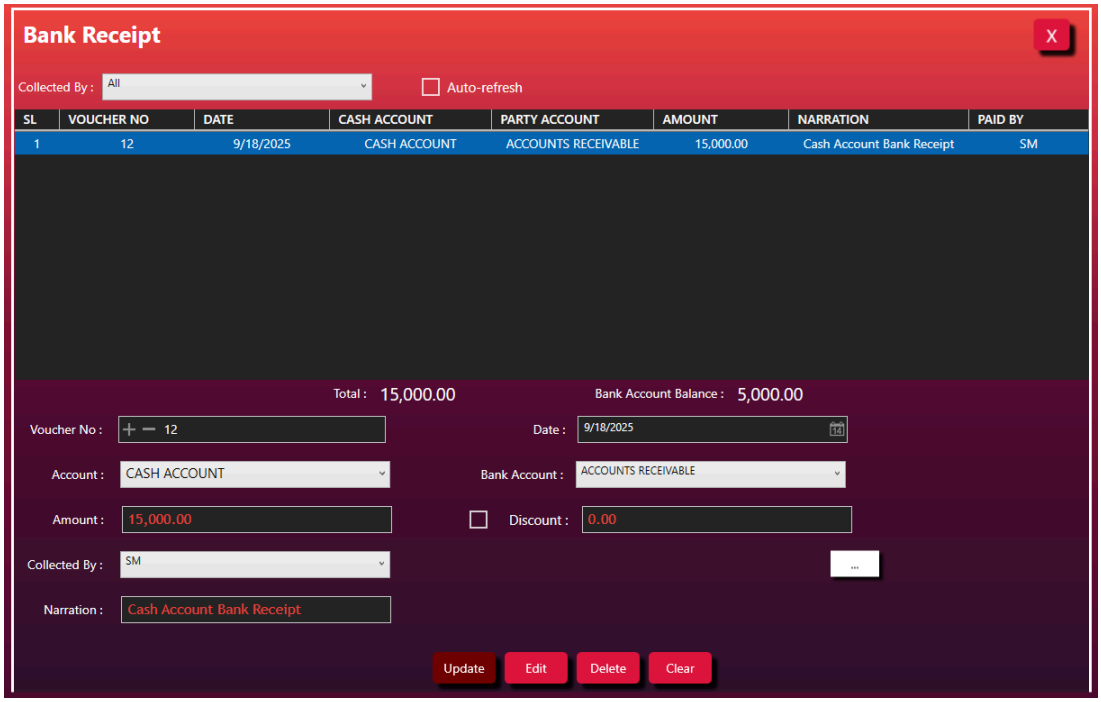

Bank Receipt Screen Window

Screen for recording incoming payments.

What it does:

Enables users to register and track received funds efficiently. Keeps a clear and organized record of all money received.

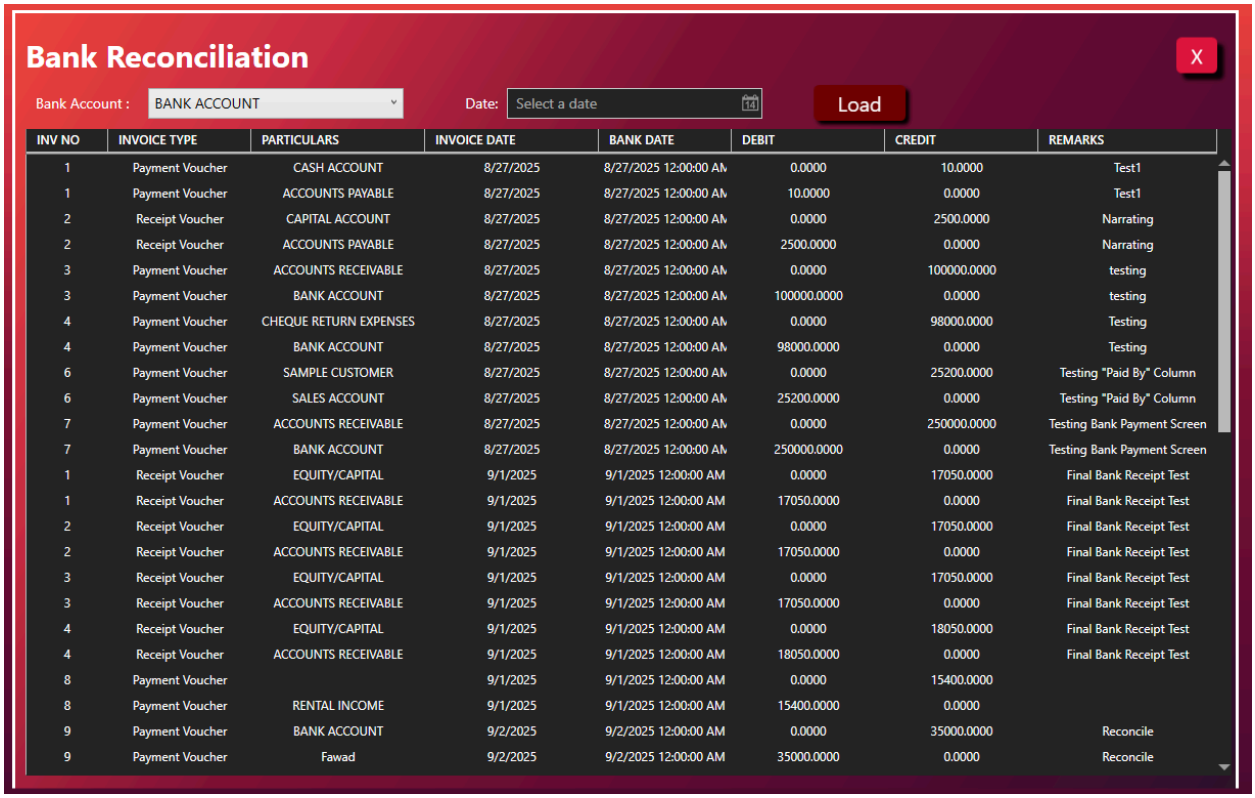

Bank Reconciliation Screen Window

Screen for reconciling bank records.

What it does:

Provides an overview of bank transactions and allows reconciliation to ensure records match the bank statement.

Simplifies reconciling your accounts and spotting discrepancies quickly.

Loading Records **by Date** in Bank Reconciliation Screen Window

Date-based filtering in reconciliation.

What it does:

Shows only relevant transactions for a selected date range, making reconciliation focused and efficient.

Helps focus on the correct period and speeds up the reconciliation process.

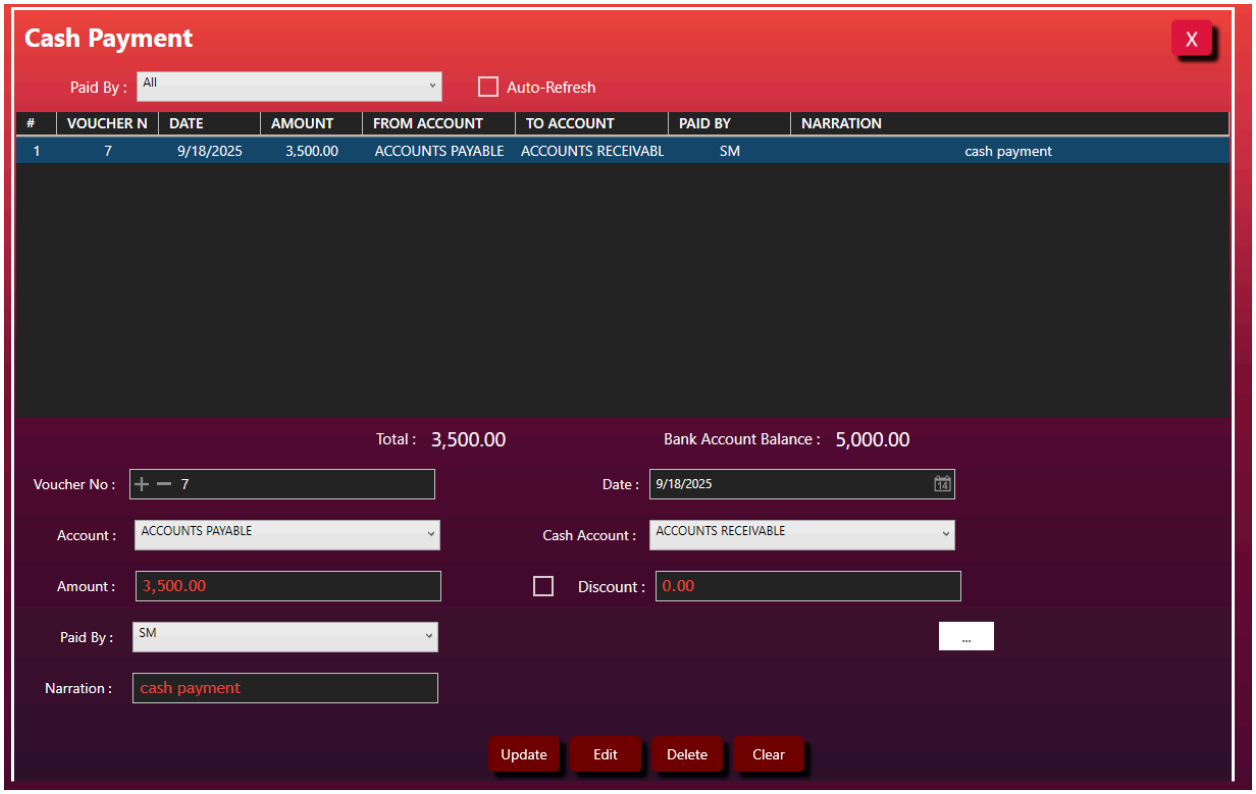

Cash Payment Screen Window

Screen for recording cash outflows.

What it does:

Tracks all cash payments systematically for accurate financial reporting.

Ensures cash payments are properly recorded and easy to review.

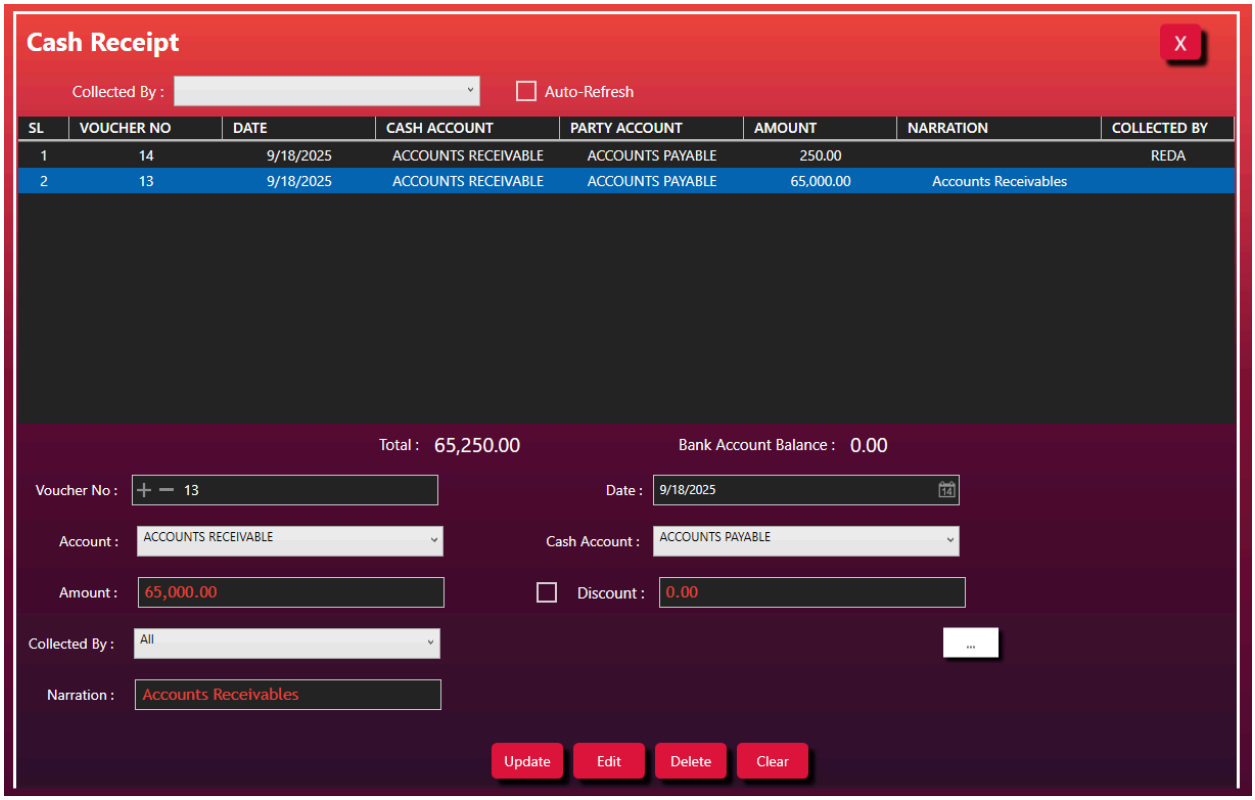

Cash Receipt Screen Window

Screen for recording cash inflows.

What it does:

Allows users to capture all incoming cash and link it to relevant accounts or transactions.

Keeps cash inflows organized and easily traceable.

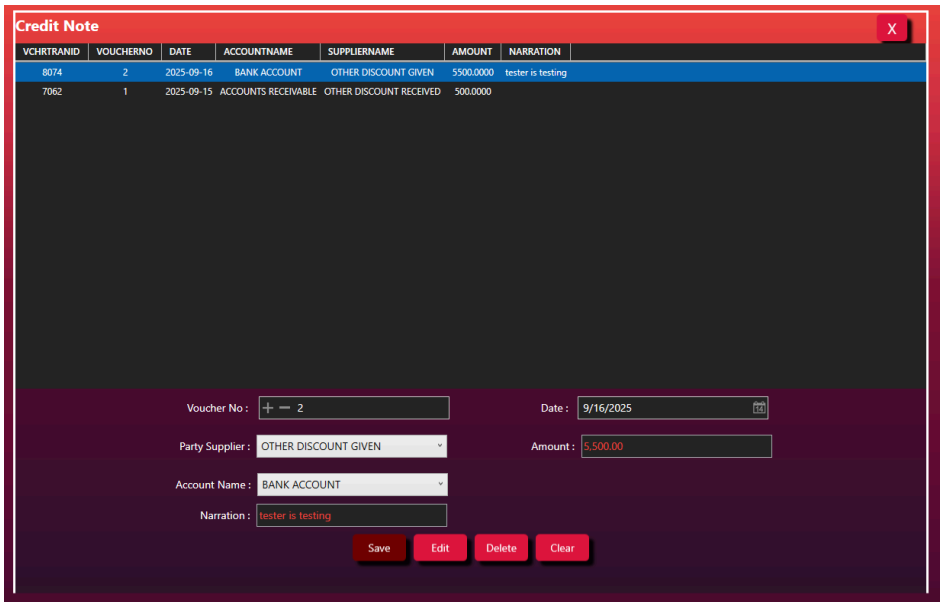

Credit Note Screen Window

Screen for issuing credit adjustments.

What it does: Helps users record credits applied to accounts or customers.

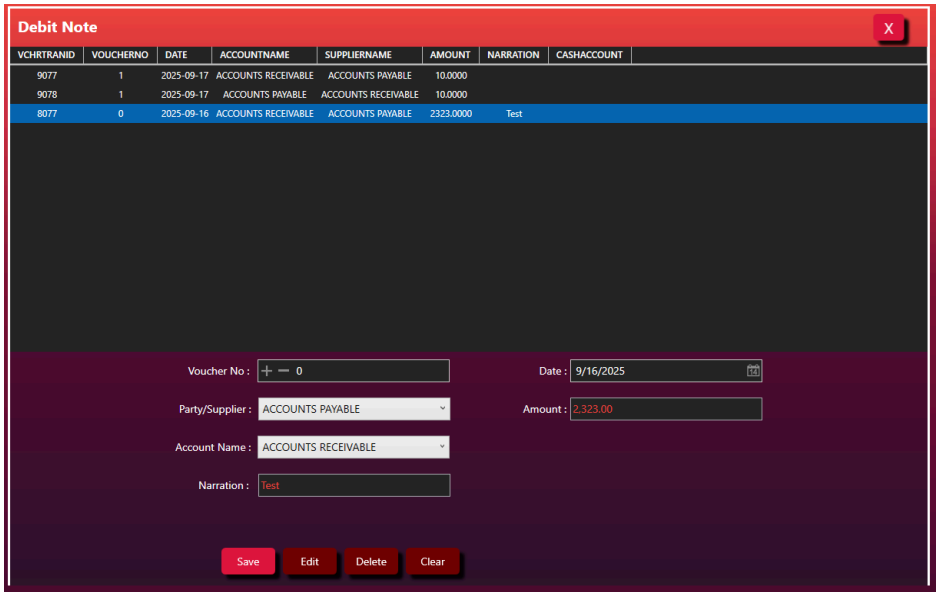

Supports accurate adjustments to customer or tenant accounts."

Debit Note Screen Window

Screen for issuing debit adjustments.

What it does: Allows recording of charges or corrections that increase balances owed. Ensures all additional charges are properly documented and traceable.

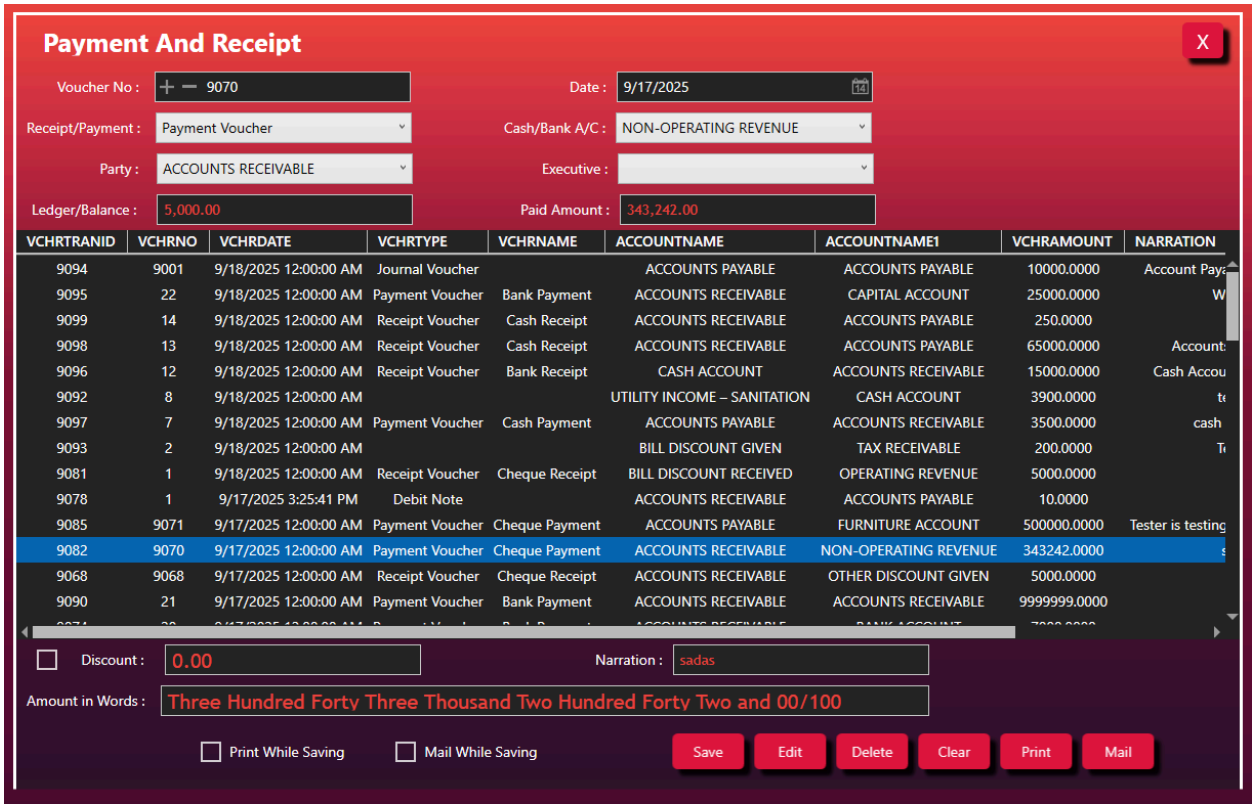

Payment And Receipt Screen Window

Unified view of all payments and receipts.

What it does:

Offers a combined overview of incoming and outgoing transactions.

Gives a complete picture of your cash and bank activity in one place.

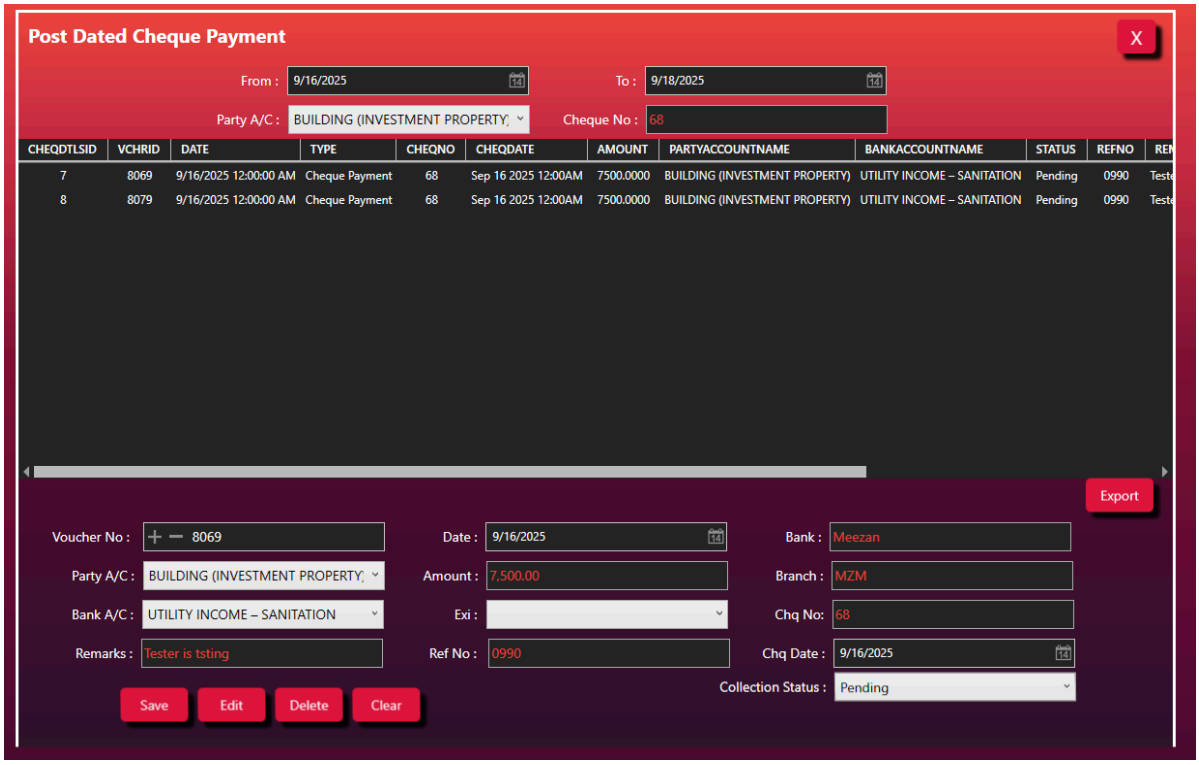

Post Dated Cheque Payment Screen Window

Screen for managing post-dated cheque payments.

What it does:

Tracks payments scheduled for future dates, ensuring proper processing when due.

Keeps future-dated payments organized and reduces missed or late processing.

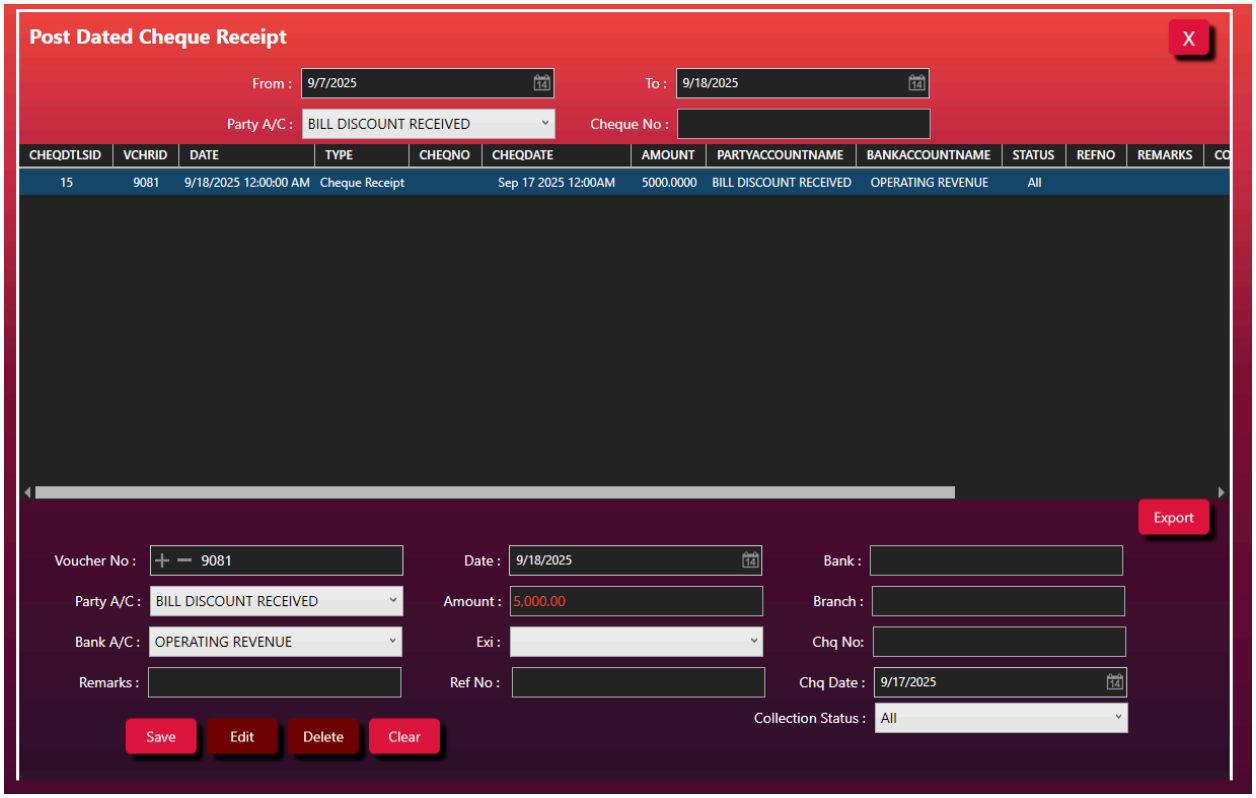

Post Dated Cheque Receipt Screen Window

Screen for managing post-dated cheque receipts.

What it does:

Tracks incoming cheques scheduled for future dates, ensuring they are processed correctly when due.

Helps manage incoming post-dated cheques efficiently and avoid errors.

Conclusion

AccountsPRO Release 3.1 represents a significant step forward in simplifying accounting and financial management for your organization. Every improvement in this release has been designed with the end user in mind, ensuring that complex financial tasks can be handled quickly, accurately, and with minimal training. The updated workflows for bank reconciliation, journal entries, tenant management, and payment handling provide your team with clear guidance while reducing the possibility of mistakes. By supporting bulk uploads, date-based filters, and user-friendly dashboards, AccountsPRO helps your staff save time and focus on meaningful work rather than repetitive manual entry.

Security and compliance have also been strengthened, giving administrators better control over access, audit trails, and password management. At the same time, finance staff benefit from an intuitive interface that reduces friction when performing daily tasks. Whether it is tracking receipts, reconciling bank records, or issuing notes and adjustments, AccountsPRO ensures information is both transparent and trustworthy.

Ultimately, Release 3.1 is about empowering your team with tools that are reliable, easy to use, and aligned with your business needs. It provides clarity, accuracy, and confidence in your financial data — helping you make better decisions with less effort.

Thank you for reading!
