Nagadan ERP User Manual

Introduction

We have been in for 5 long years' experience in Business Solution System. Our project running More than 70 countries in the world. Our the most popular project Nagdan ERP and Accounting Software serving Quickly brings world fame. Even before that we marketed with another software called WAAcash Accounting Software. Gradually we have become well known to many.

The Nagadan ERP Software, is used to operate the day to day transaction of a business firm like Retail Shop, Wholesale Shop, Chain Marketing Companies, Super Market and Manufacturing Companies. By this application you can enter Sales, Sales Return, Purchase and Purchase Return Entries. You can also enter cash collection, cash payment, journal entries and all other entries related accounting and inventories. This has barcode scanning and printing features and this is a GST enabled application as you can make Tax Sales Entries and print Tax Sale Invoice. And also you can take Sales Tax Reports to submit the taxation process.

Login

After the splas screen you can see the login window.

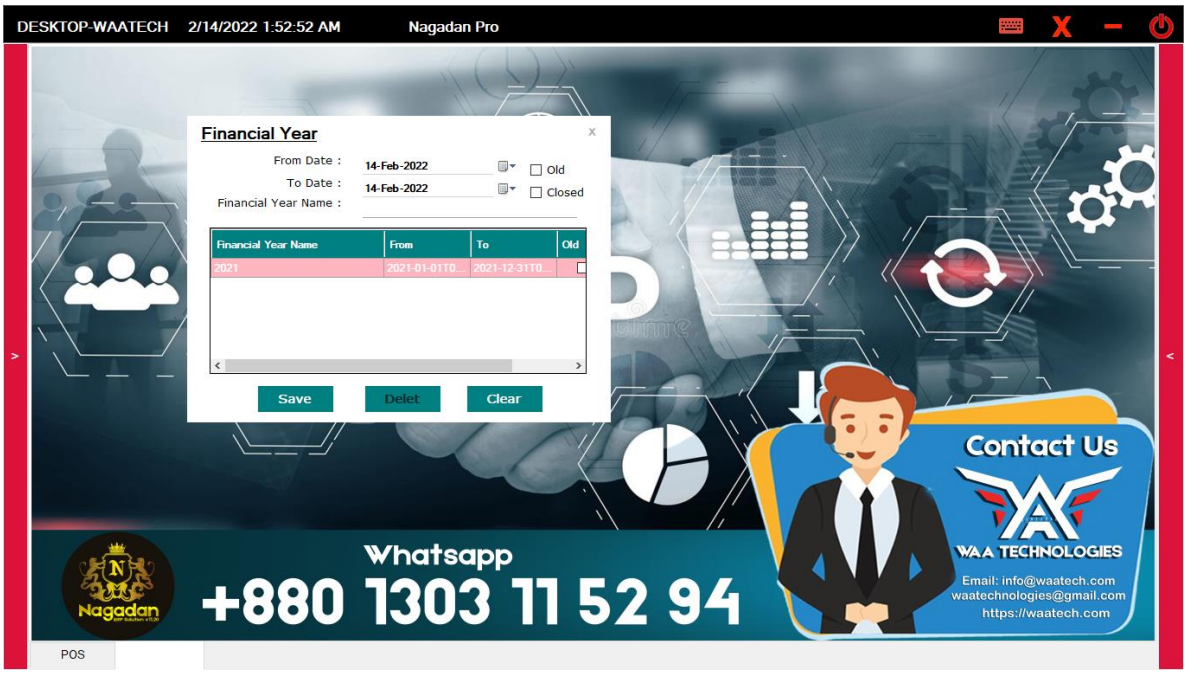

The User Name and the Password are given below

User Name: ADMIN

Password: 741

After login you can see the main window

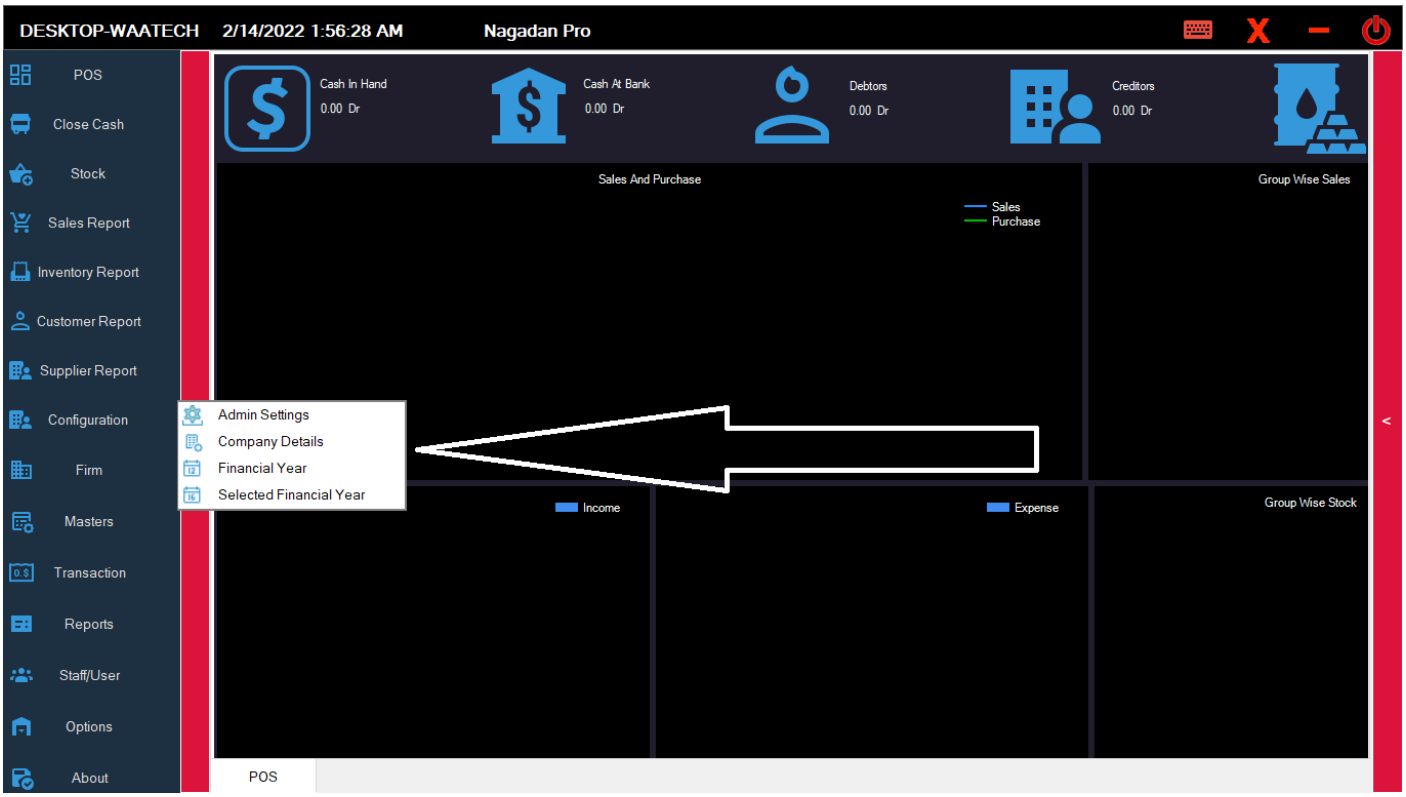

Financial Year

The detail to enter in this field is automatically updated by the software itself. You can check the details and if you find any mistake you can rectify.

Firm

The first part of the window is Firm. This part is not so important.

In this section included following forms.

1. Admin Settings

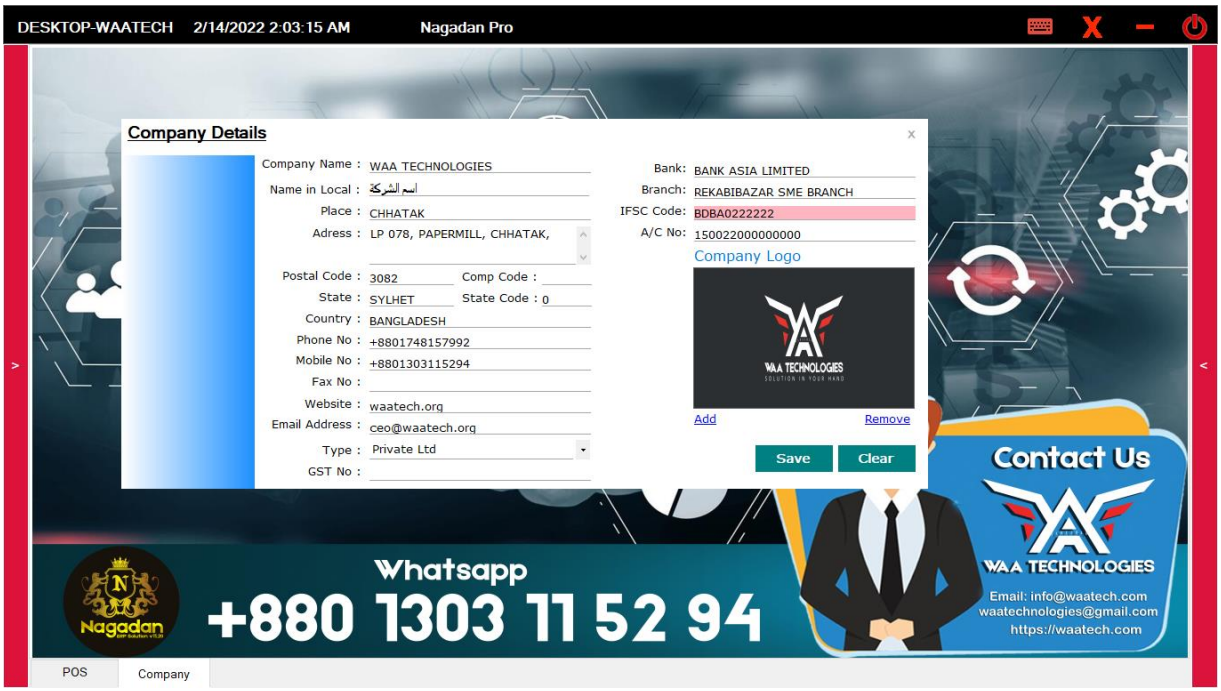

This is for change the password of Admin User.

Firstly, want to type old password then enter new password lastly again type new password for confirmation. Then press update. By pressing Clear button all field will be blank except User Name. The close button is for close the window. By pressing escape button, you can also close the window.

2. Firm Details

This is for Enter the details of the firm.

You have to enter Name, Place, Address and other details. You can also add the logo and bank details.

Information you entered in this forms will show in reports. After enter the details you have to press the Save button. When details saved to the database the save button text will change to “Update” after displaying a message box.

3. Select Financial Year

This window is used to select the current financial year from created list. This is also done by the system.

5. Lock Application

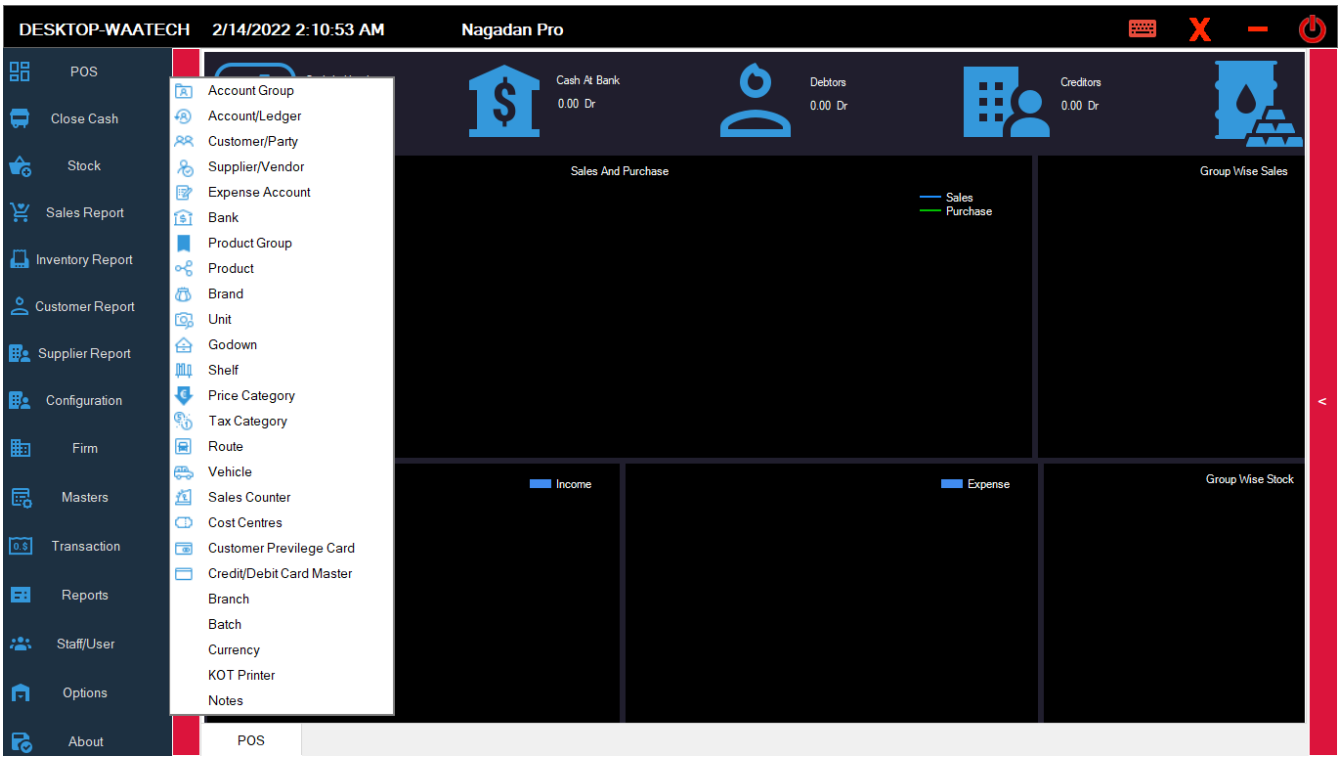

This is used to lock the application. By open this window you can lock the application. After entering correct password, the app will be unlocked.

6. Log Off and Exit.

Both are used to close the application. While pressing the log off, to start the application in next time you want to login. At the same time by pressing exit button, you don’t want to login in the next time.

Masters

This is a very important part of the application. Before starting to enter transaction like sale entry and cash collection entry we have to create account and product. To enter such details, we are using forms under this section.

Following windows are coming under this section

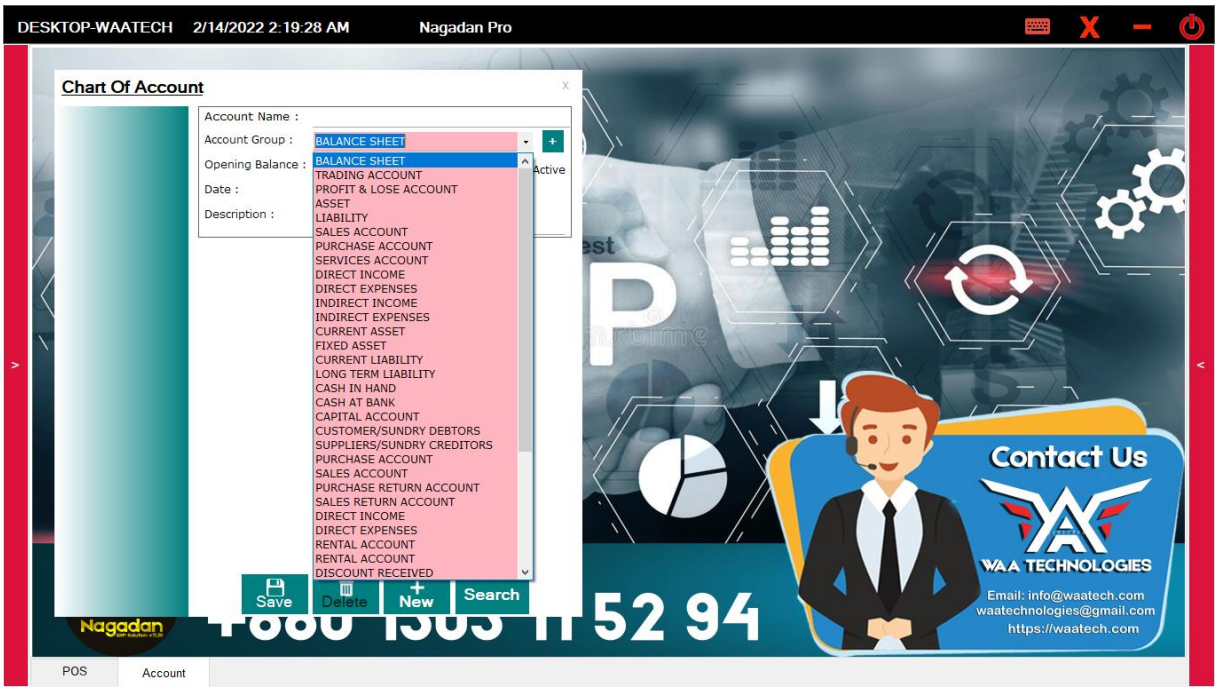

1. Account Group

This is used to enter account group. You have to enter the name of account group and under account group. There are 36 in built account group. What is the use of creating the Account Group…? Some time you have doubt. Like account group we are also creating product group. Both are creating for reporting purpose. Trading, Profit and loss account and Balance Sheet are creating by using the account group.

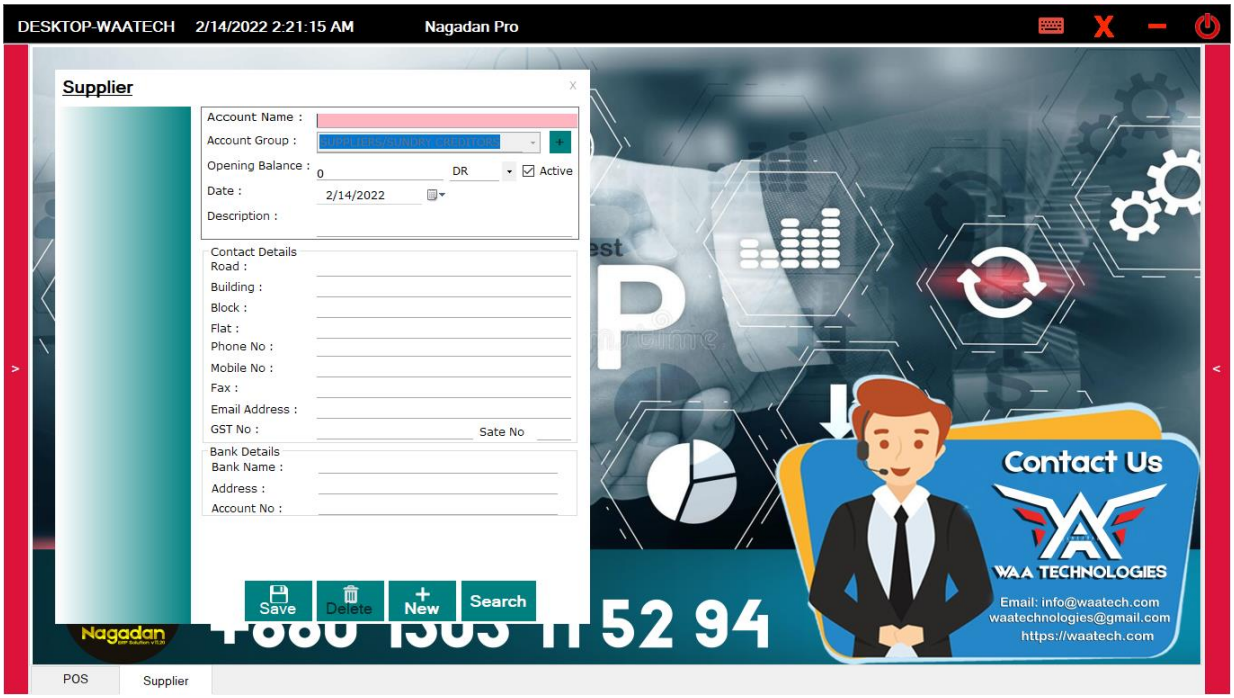

2. Account/Ledger

Next window under the Masters tab is Account or Ledger creation window.

If you enter ledger of Indirect expense, you have to enter expense head (like water bill expense) and Account group (here Indirect Expense) and opening amount debit or credit and date of calculation and description.

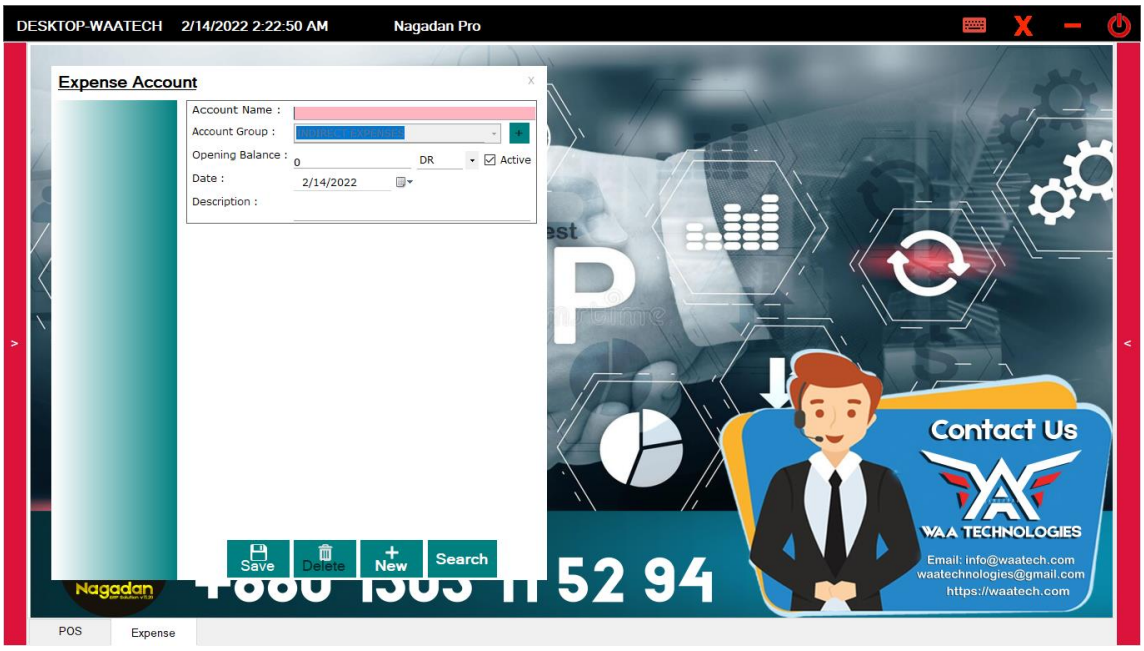

If you enter details of a Customer or a Supplier, you can enter details as given below.

If you want to update or change any data you have entered earlier, you have to select the account from the list given in the right side. There are options given to search accounts. You can search by just typing the name in the test box or you can search by giving search option in the first field or by giving group name.

3. Expense Account

Create an expense account from this form and this maintain from Indirect Expenses. Also can by opening balance for the expenses. after creating account by default it will be active. after sometimes if you want to close account just click on close button.

4. Bank

In this form you can add Your Business Bank account for maintain for banking transaction.

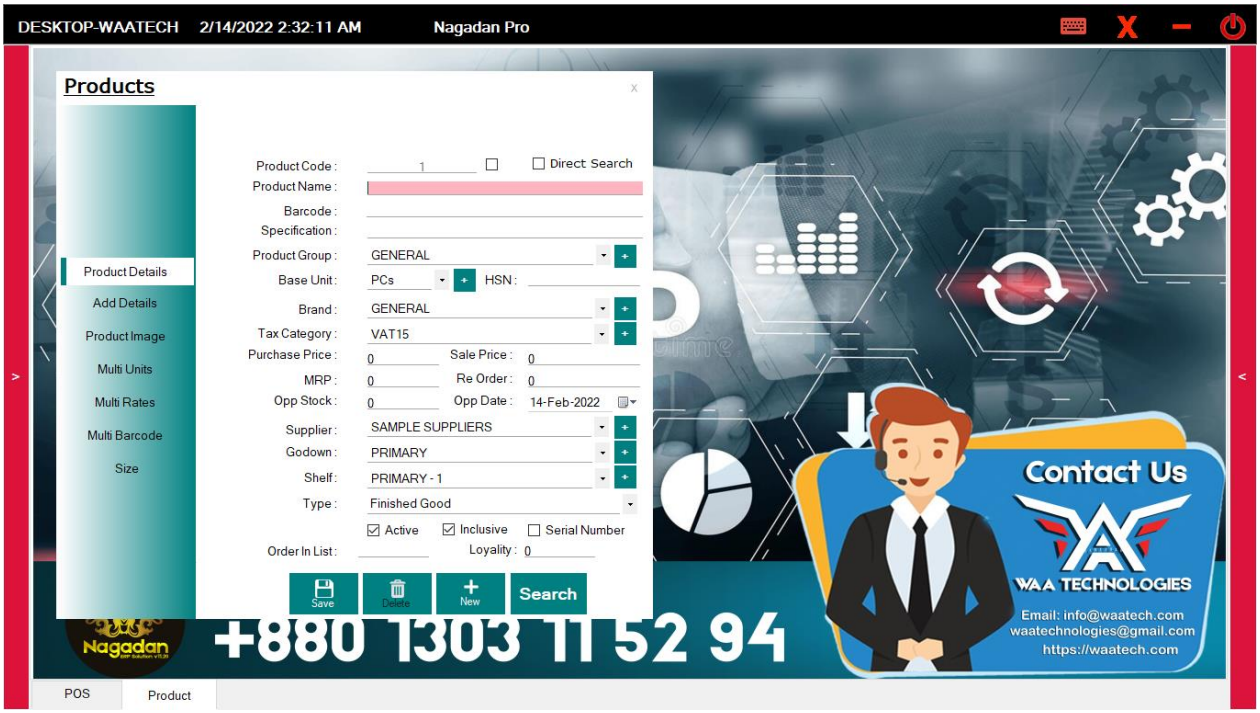

5. Product Group.

You can enter product group with giving name of Product Group, under which group this is coming, the executive incentive for selling products under this group and selling and purchase discounts.

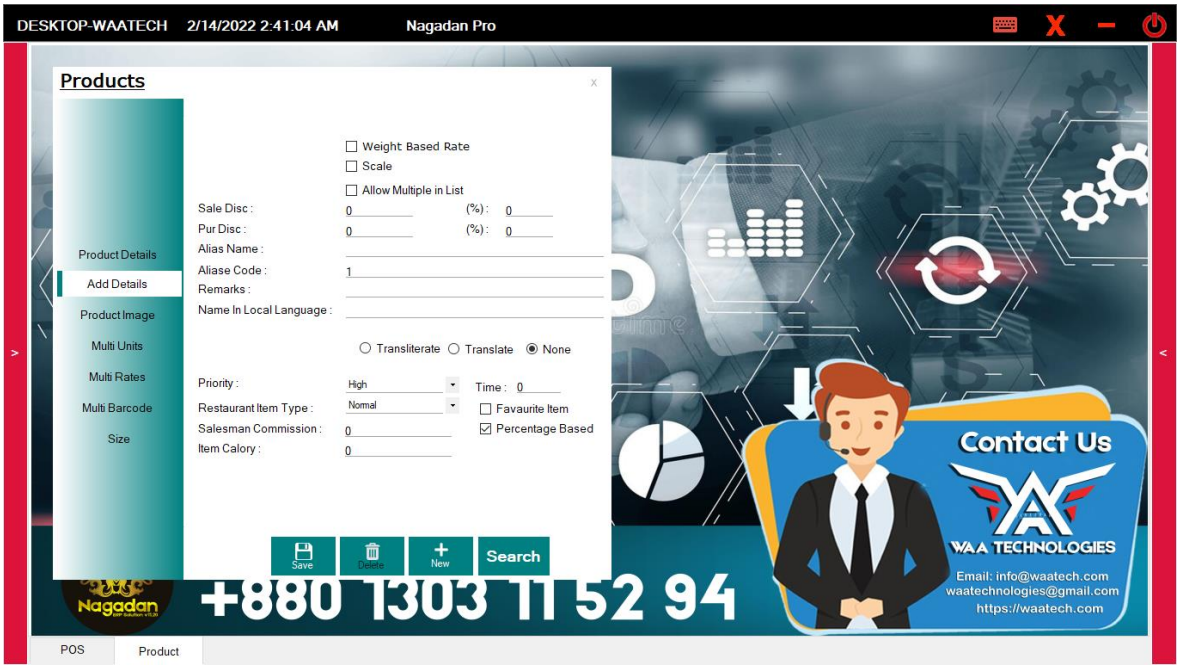

6. Product

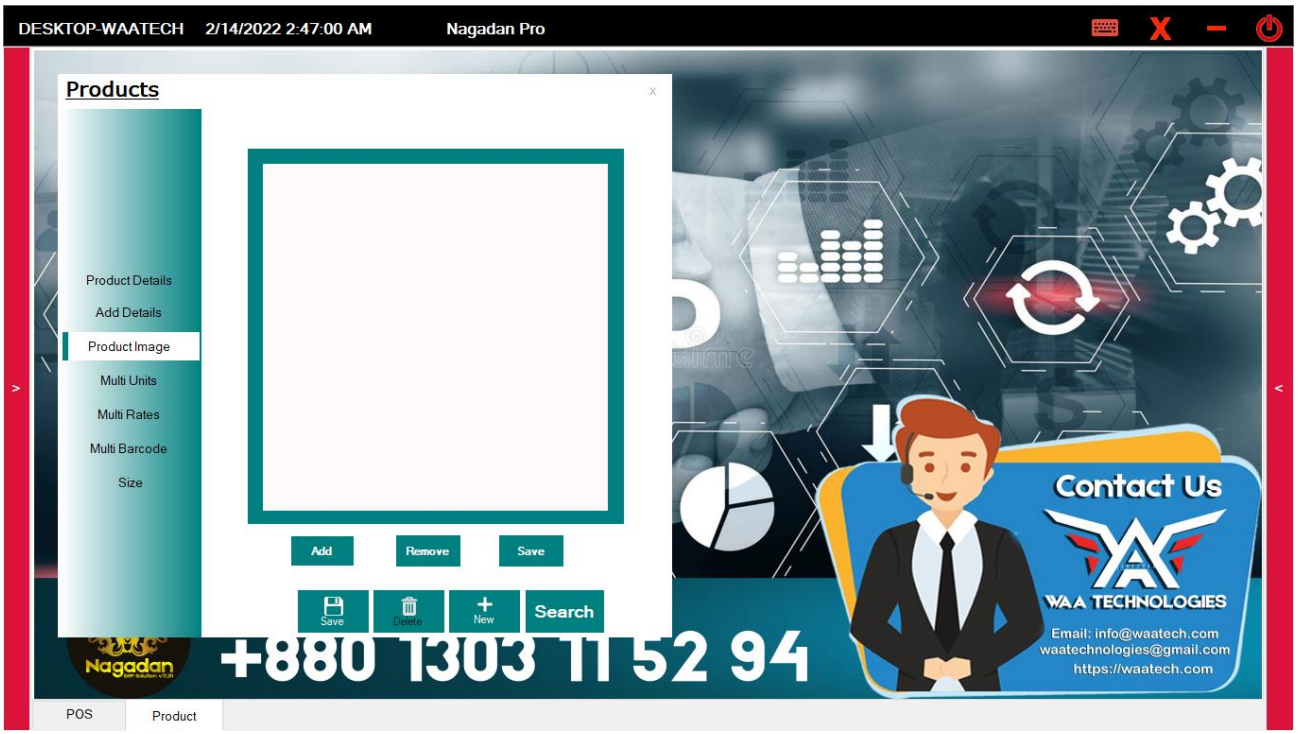

This is the most important and complicated head coming under Masters. Like account, you are wanted to create products before entering purchase entry or sales entries. If you don't want inventory and only want accounts, then you can skip this section.

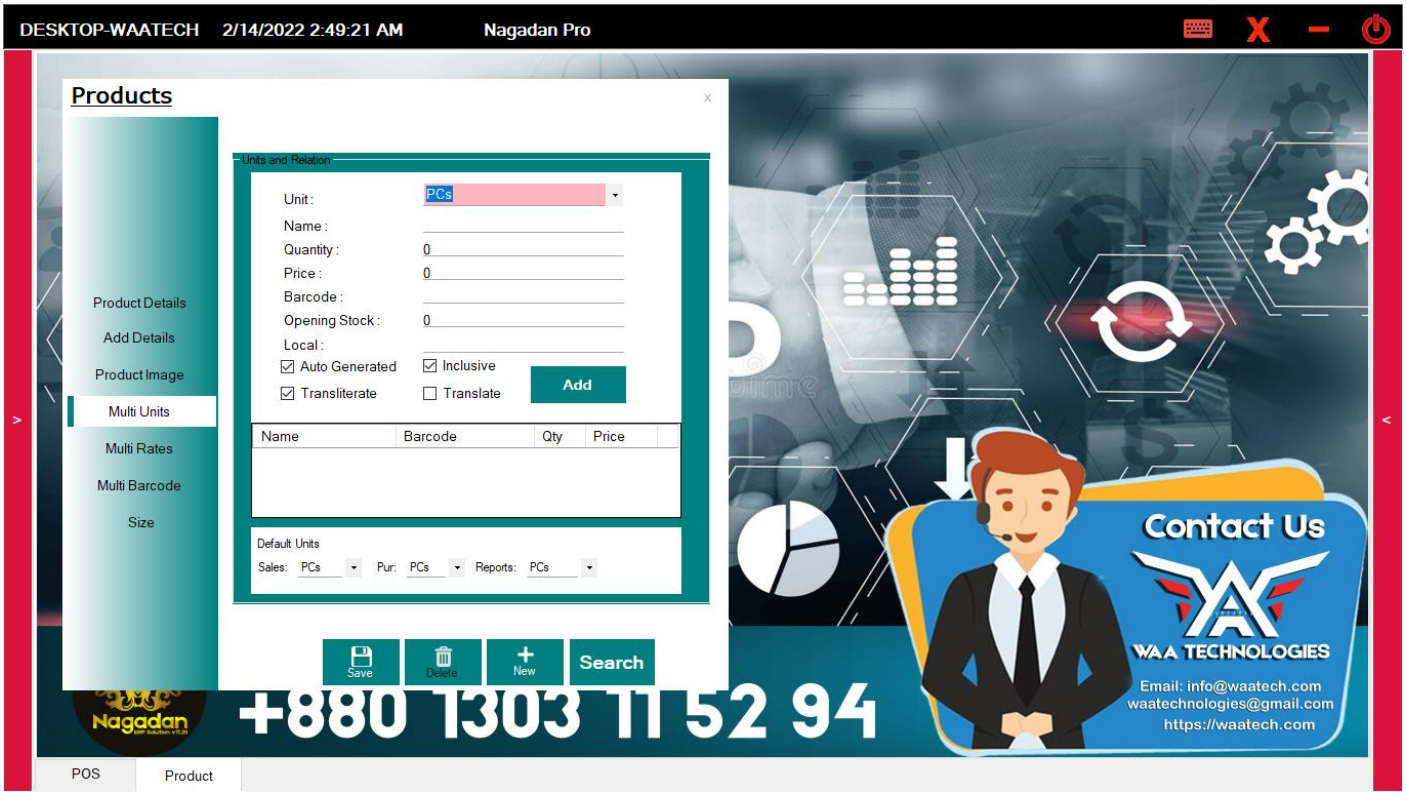

In the Product window coming another Seven sub windows. First sub window is Product details. This is the main window. In here we can enter the name of product, specification (this field is used to enter some criteria like Brand, Tax Category Purchase Price and Selling Price, Opp. Stock, Supplier, Godown, Type etc.), Product Group, prices etc.

In the second window we enter Add Details. in here we can add the details for product is Weight base rate, Scale, Allow multiple in List. Same the form we can make alias name and code for product also Local name for Arabic language can be added. If product for restaurant below the form can add these for detail for it.

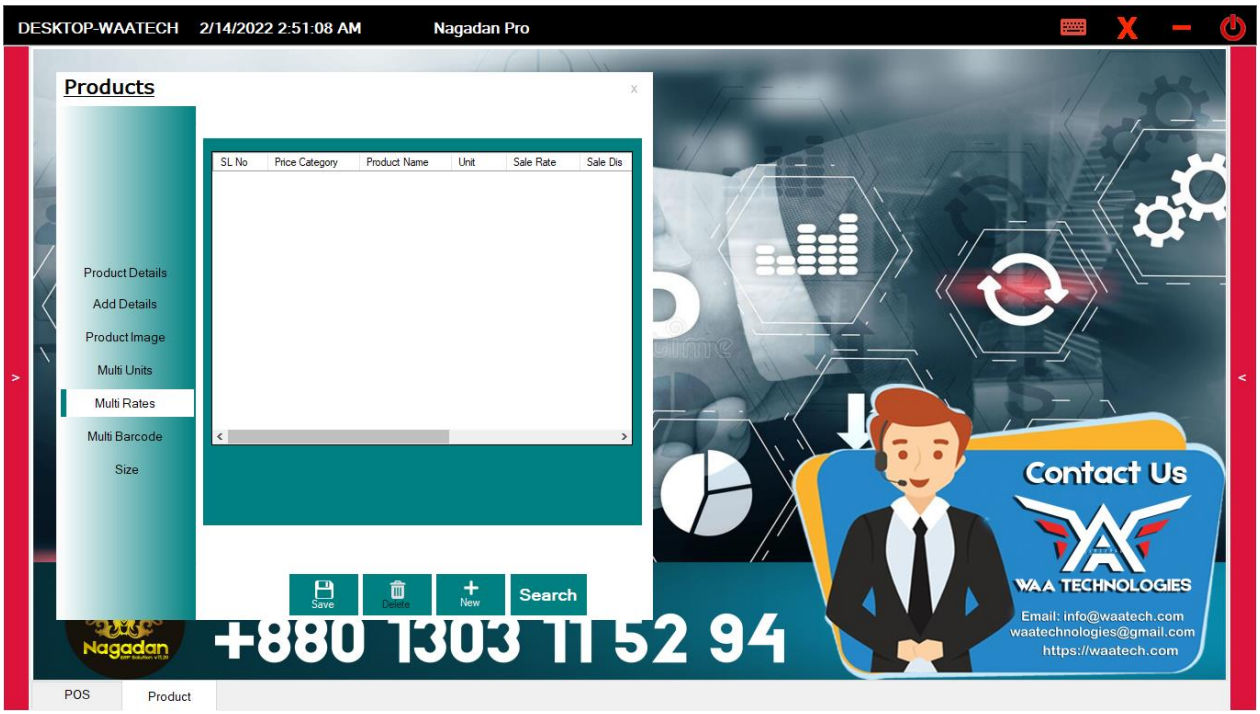

Product Image: Also have to chance for adding image for product. This is also optional.

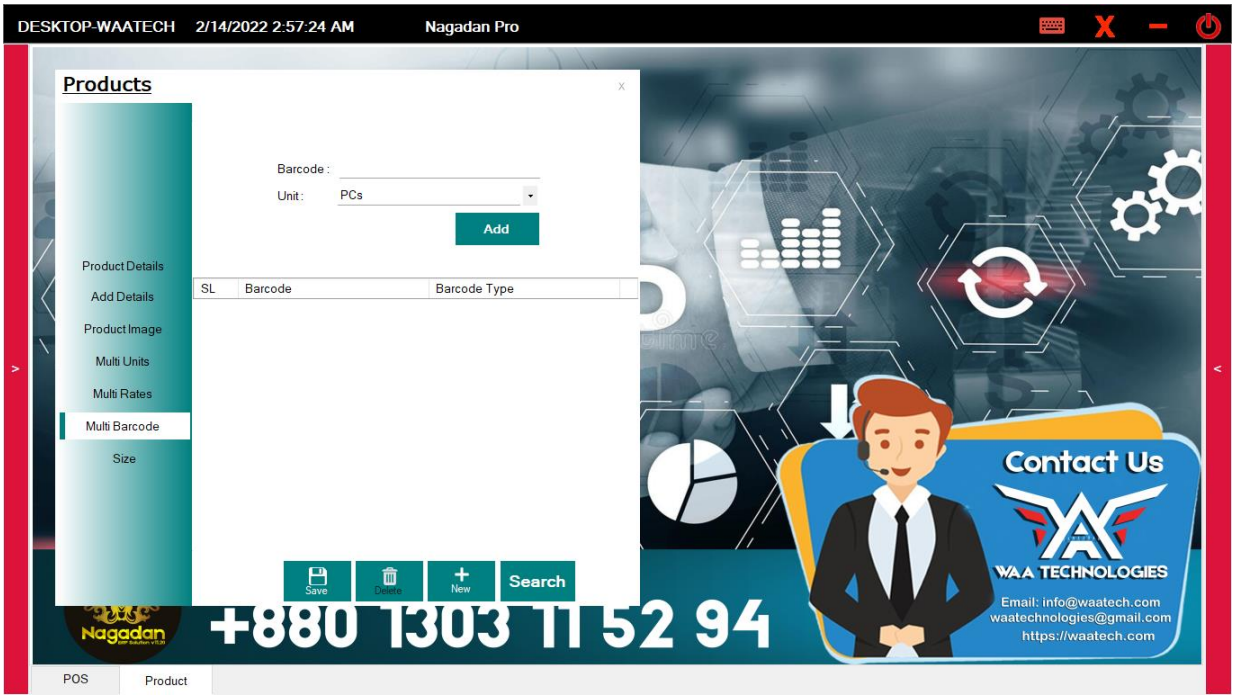

Multi Unite: Some time we sell some product in different units. For example, we sell screws in pieces, in boxes and in cases. And also we can mention sale unit, purchase unit and report unit.

Fifth sub window is Product Price Settings. Some product we sell I different rate to different people. We can set the different prices in this window. For that we have to firstly create Price category. We will discuss in following chapter. This is optional

Many products have multiple barcodes on them. Obviously there is the UPC (That should always be unique but with one supplier we have can and does change regularly). Then there may be, for example, a product piece, a product box or pair other ones. also we included multiple barcode system facility.

6. Brand

This is essential one. In this window you have to enter name of the brand and description if you want.

7. Unit

This is the window to enter measurement unit. Some basic units have already entered.

8. Godown (Warehouse)

Some company will have one more warehouses. If you have one more warehouse, you can enter details here.

9. Shelf

This window is used to create shelfs. For this you have to select godown first. After creating Godown and Shelf, if you asighn Product with the exact godown and shelf, you can easily find out the place of product. I will explain the matter in details in the next chapter.

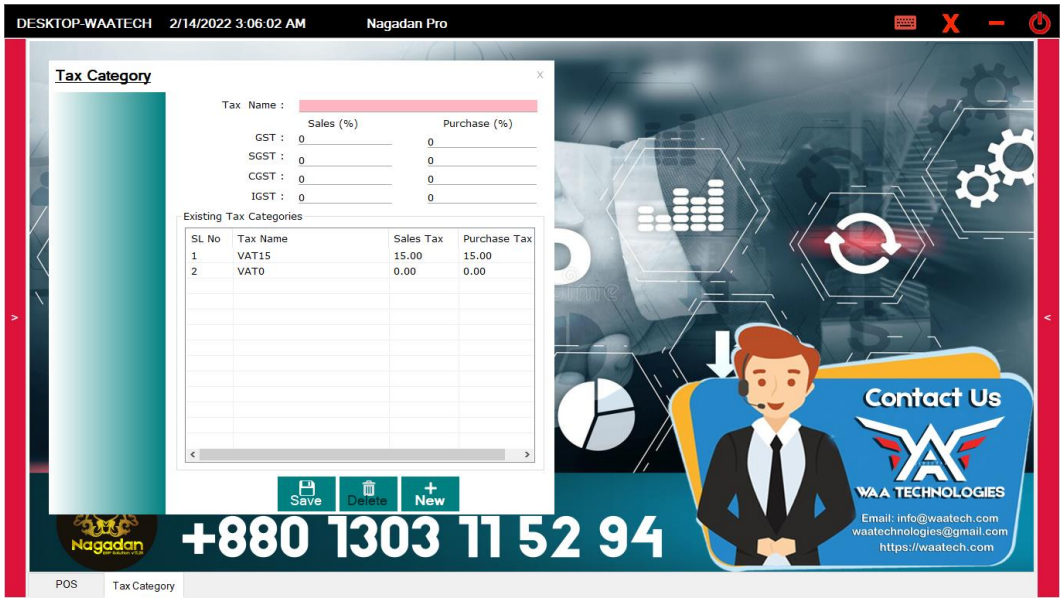

10. Price Category

When creating the product, we see the importance of Price Category.

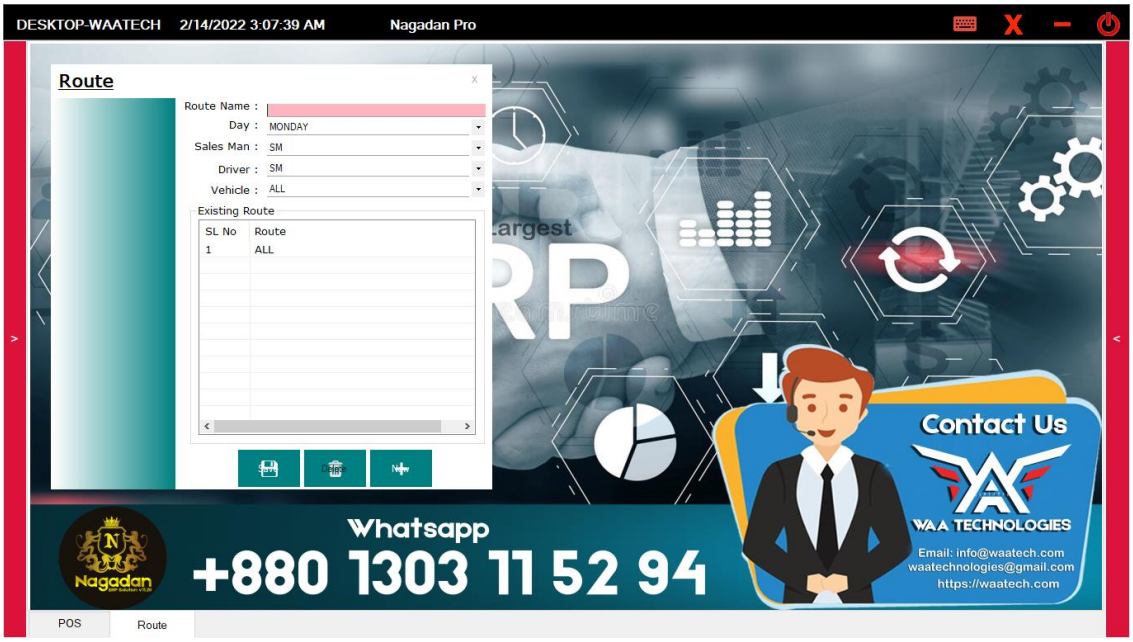

11. Tax Category

For selling product with tax The Tax Category is important. As per Indian laws we have created five in built tax category. You can change this as per your country law.

12. Route

The company is a wholesale and have route sale like Monday route, this is important one.

13. Vehicle

Vehicle is also important, if you want sale through vehicle.

14. Sales

Counter sales personnel are the first employees that customers meet on entering the store or organization. They are responsible for handling the sales process, from the time of the first request to the execution of the order. Counter sales usually take place at fast food outlets and retail stores.

15. Cost centers

A cost center is a department or function within an organization that does not directly add to profit but still costs the organization money to operate. Cost centers only contribute to a company's profitability indirectly, unlike a profit center, which contributes to profitability directly through its actions. Managers of cost centers, such as human resources and accounting departments are responsible for keeping their costs in line or below budget.

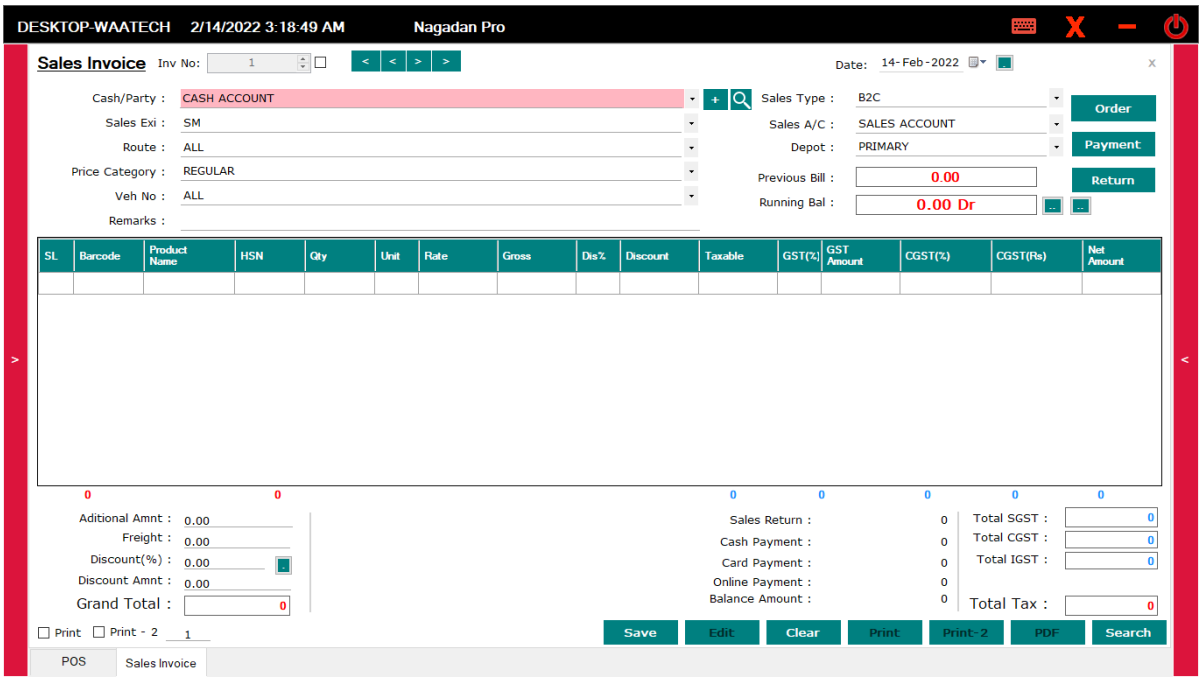

Sales

This is the main section. In here we can Sales Invoice (Sale with tax) and Sales Estimate (sales without tax), Sales Return and Sales Order.

1. Sales Invoice

If you want to sale with tax you can select this window to enter invoice.

Firstly, you want to select form type. There are four form types.

Local

If you sell product as a retailer (as selling product locally to individual persons) you can select this.

Wholesale

This form can select if you sells product to local shops as wholesaler.

Interstate

If you sell product in out of state you can select this form. In this form the GST will change to IGST

Export

If you sell product out of nation, this form can be selected.

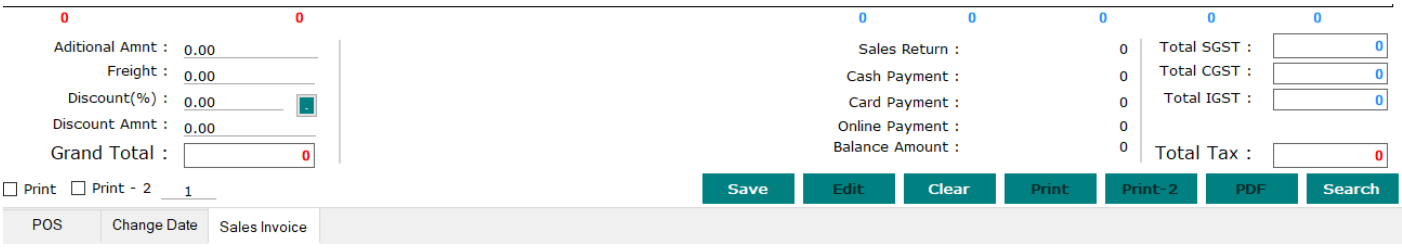

Next you want to select date of invoice. The date shown in the the form is application date. If you want to change application date you can do the same by opening Change Date. window. Option -> Change Date.

Nagadan ERP User Manual

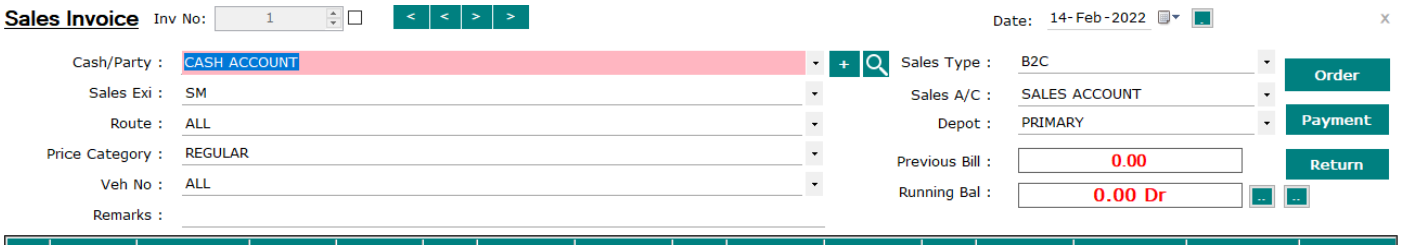

If you want change date of Sales Invoice form, you can just change date of the form. And if you want the date to be continue you can press the button in the right side of the date.

Next you want to select party account. If you sell product for ready cash, you can select Cash Account. Please note that there is an option to receive cash while selling the product in the form. You can see the option in the bottom of form.

If you can find out the party name you can create in the form itself. Just type in name box address in address boxes phone number and if the party have GST number then mention the number in GST Number box. Then press the button in the right side.

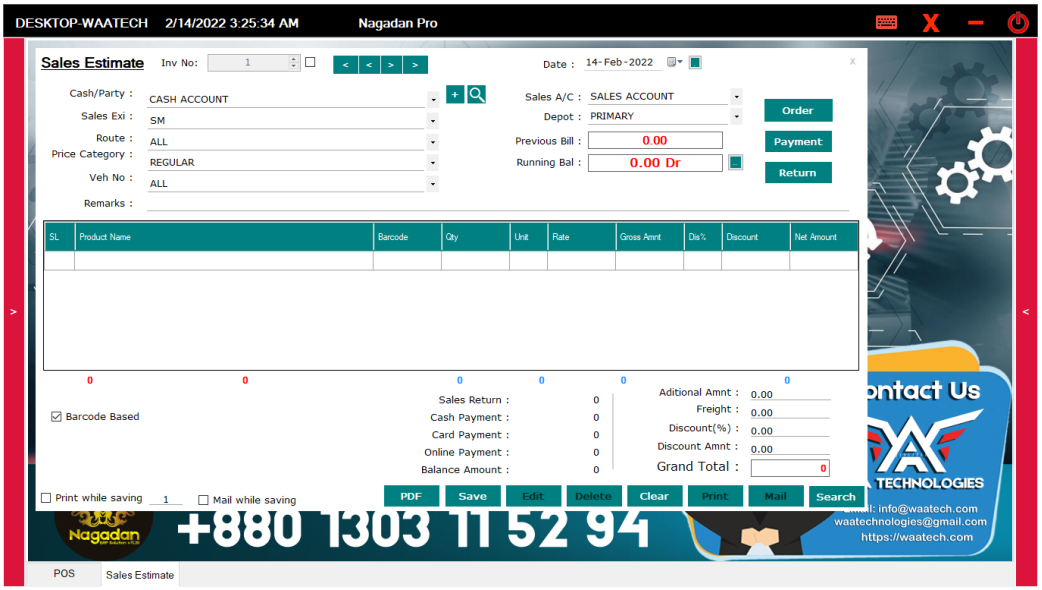

If you want, you can select route and vehicle. And also you can select the salesman and put some description. To enter product, you want to type name of the product in the product name Colom of the table or put product code in product Colom. Then you can see product price godown stock and shelf of the product.

After entering product and their quantity you have to press save button. If you don't want print you can uncheck the print while saving box.

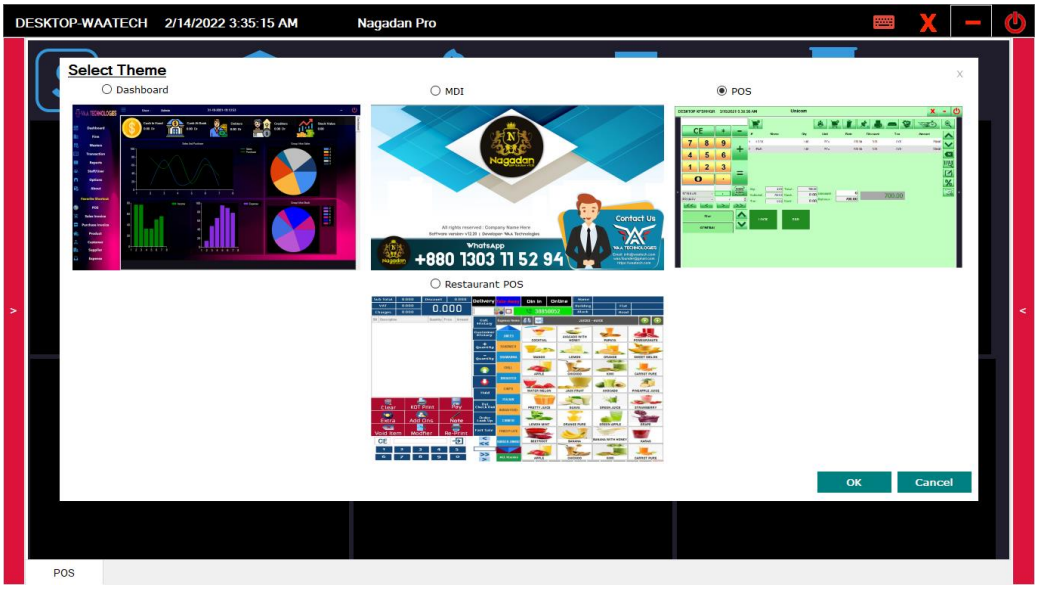

2. Sales Estimate

This form is used to Sales without tax. This form exactly like Sales Invoice. The only difference is the lack of tax details.

3. POS

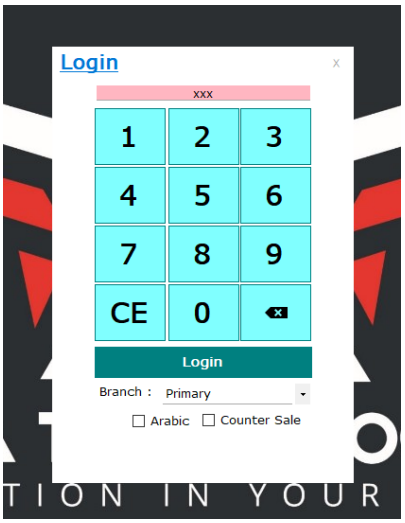

For the open point of sale please press in keyboard alt+ctrl+z. after press these will be show the below of form in window. After select the 3rd position POS button and click on OK button.

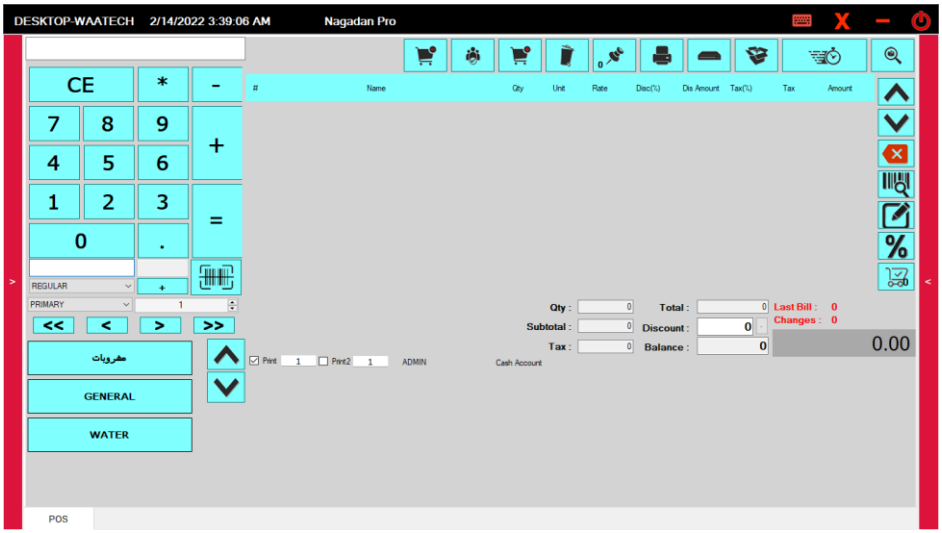

for the open pos have click top navigation bar X button.

Now you will see the login form for the pos. after enter your password POS will be show in window.

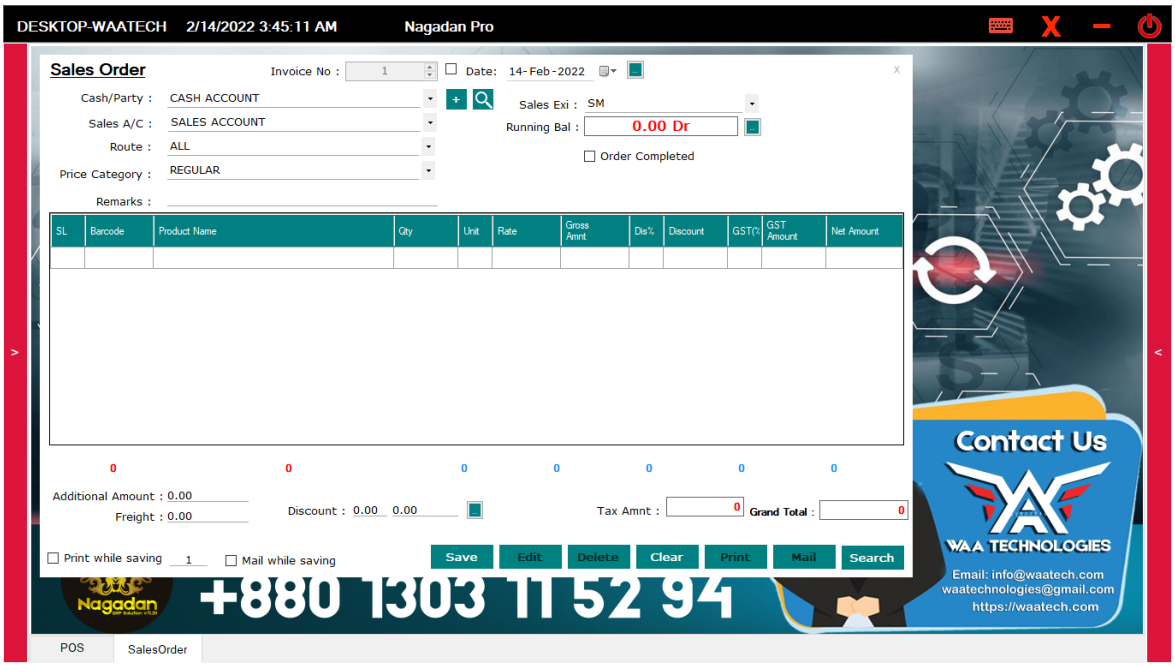

Point of sale (POS), a critical piece of a point of purchase, refers to the place where a customer executes the payment for goods or services and where sales taxes may become payable. It can be in a physical store, where POS terminals and systems are used to process card payments. We will try to make a video for understanding POS sell.

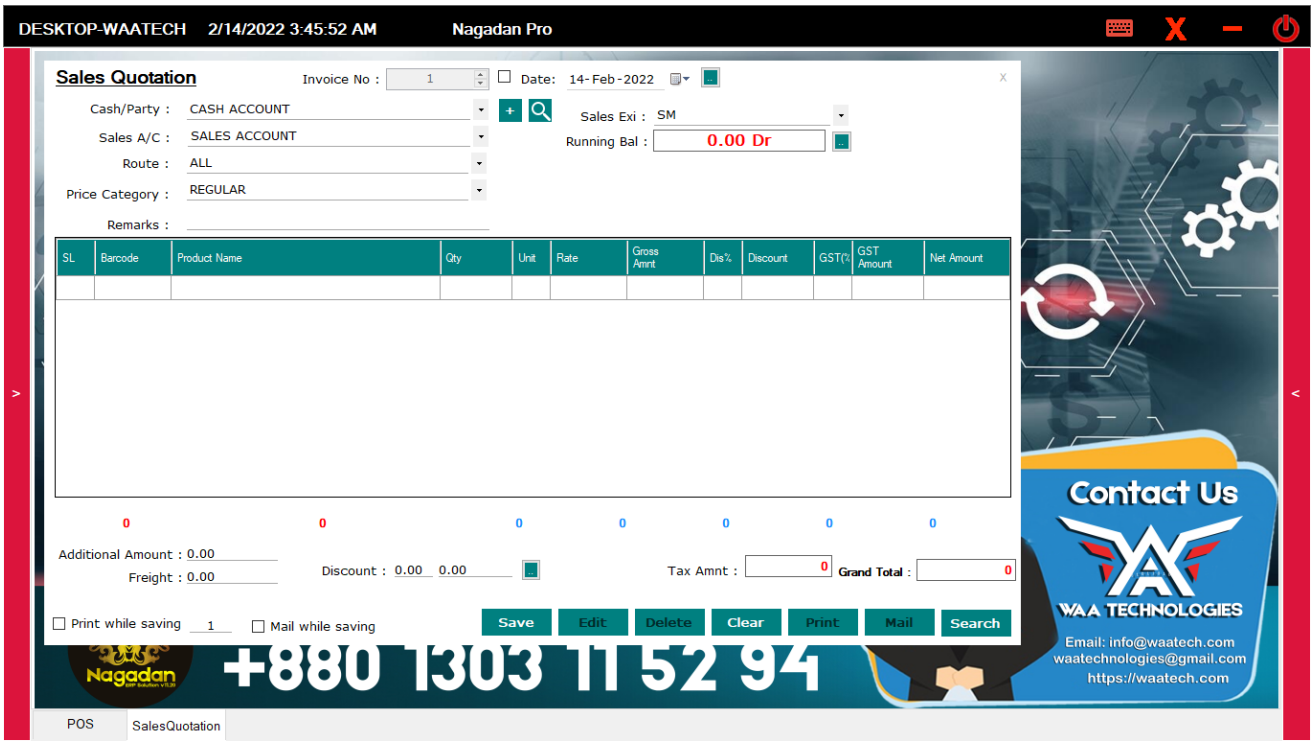

4. Sales Order

When you get order from your customer you can enter the order details in this form. And you can handover the printed order bill to dispatch section for sales . This form is almost same of sales estimate nothing new type entry.

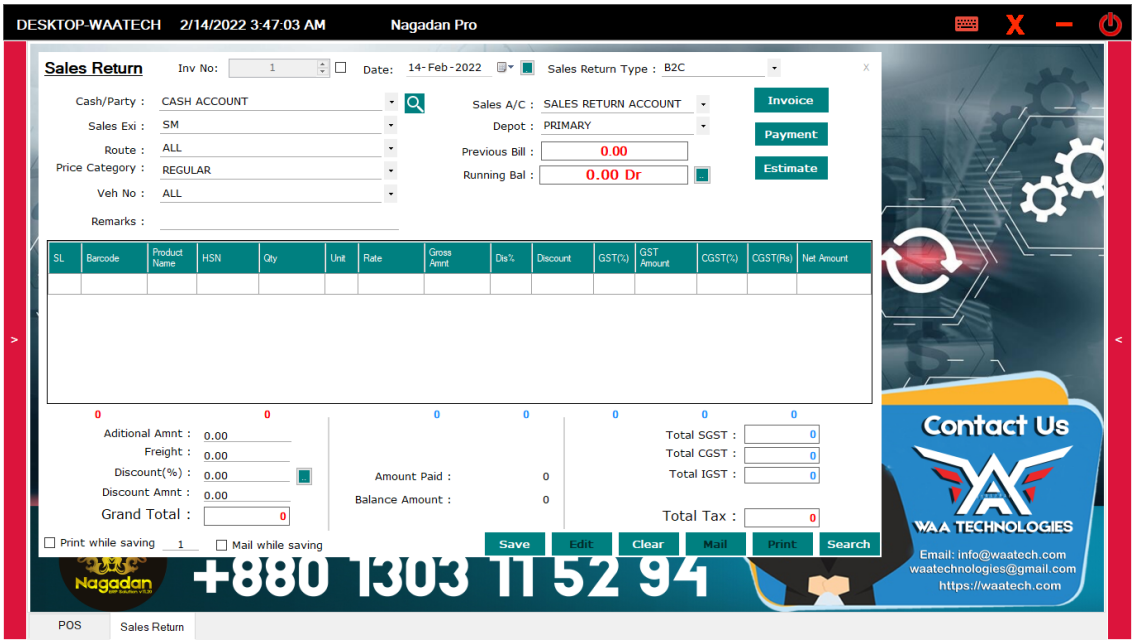

5. Sales Quotation

Operation or process of Sales Quotation is same to sales order. If Your firm is a manufacturing company or wholesale company, this form will be needed as some customers will ask quotation to know about product and their price.

6. Sales Return

If your customer is return some product as you sold, you can enter the sales return entry in this form. This is like sales invoice form. And cash payment option also given.

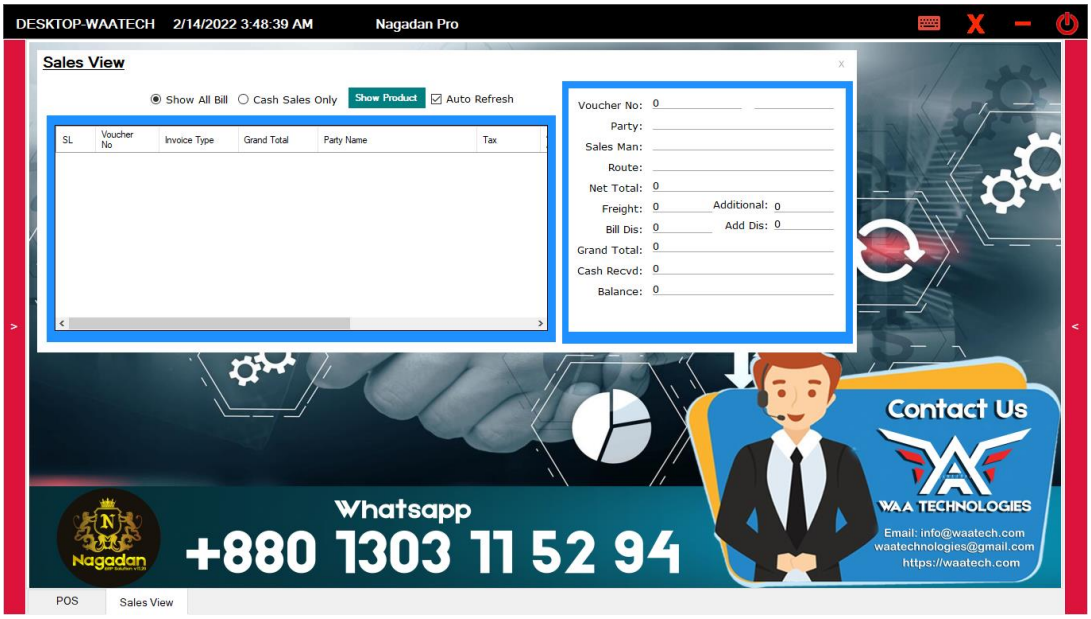

Bill Print.

If you want to print all receipt or some of them as bulkly, you can use this form. We have given many options as you want to print first to last or last to first invoice you can print. If you want one more copy of each item you can print the same by giving number of copy. And you can see the current printing page and you can stop the printing process by clicking the button given in the right side of number of copy option.

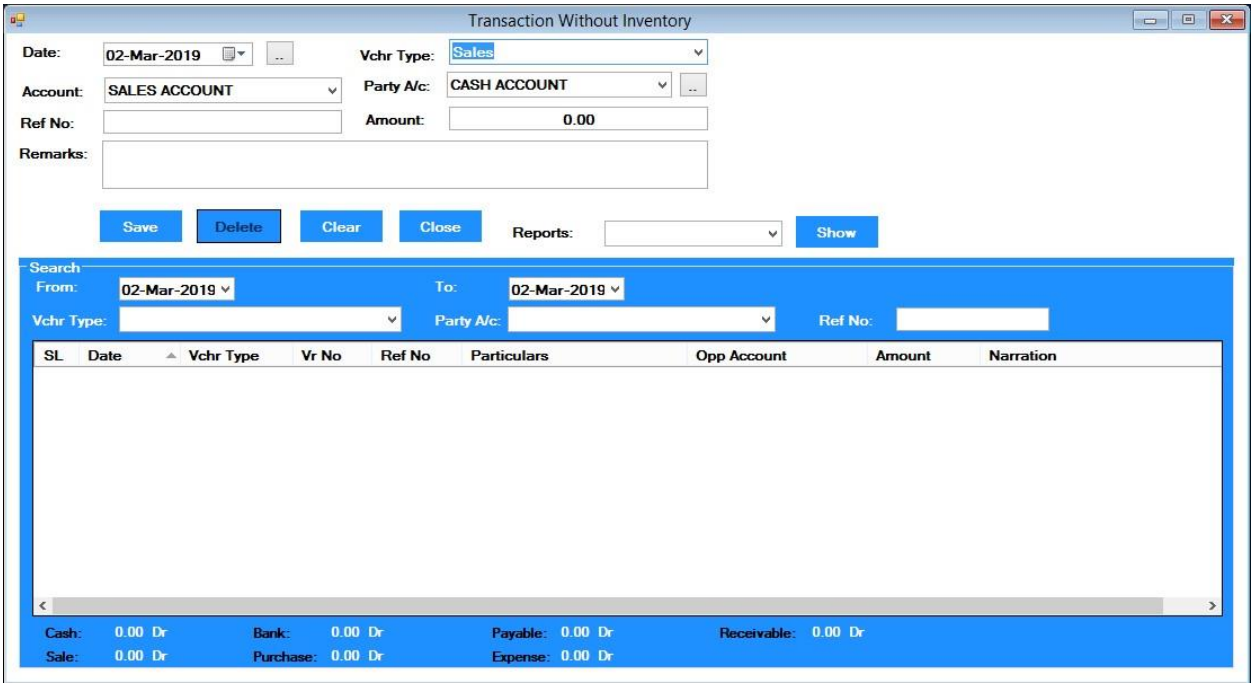

Sales View.

If you want to see sales invoice entered in your firm on a particular day you can see in this form. If your firm have one more counter and using one databases, then this form is very important.

Transaction without Inventory.

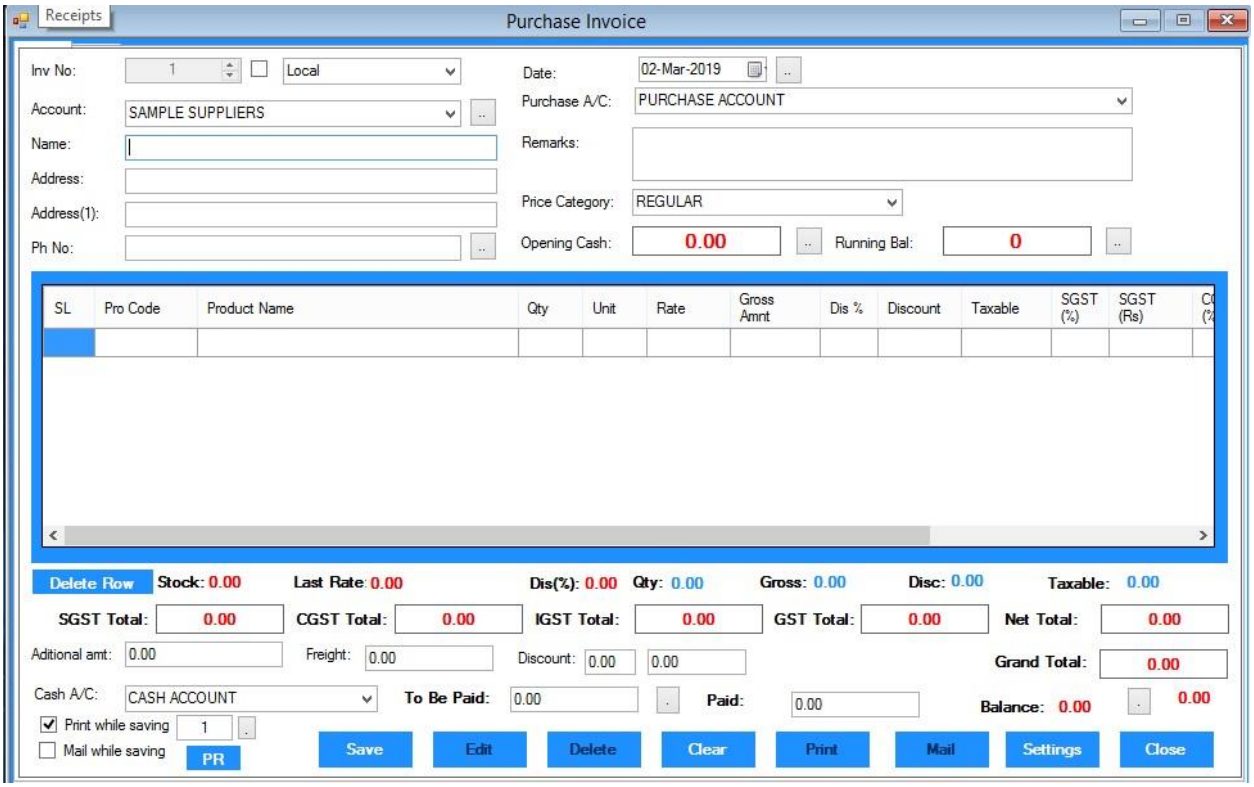

If you don't want to record inventory and want only accounting entries, then this form is very important. You can do all your entry by this form. You can enter sales, sales return, purchase, purchase return, cash payment, cash receipt, Journal entry, postdated cheque receipt and postdate cheque payment. And also you can take reports from this form directly.

Purchase

To a business form purchase entries are very important like sales entry.

1. Purchase Invoice

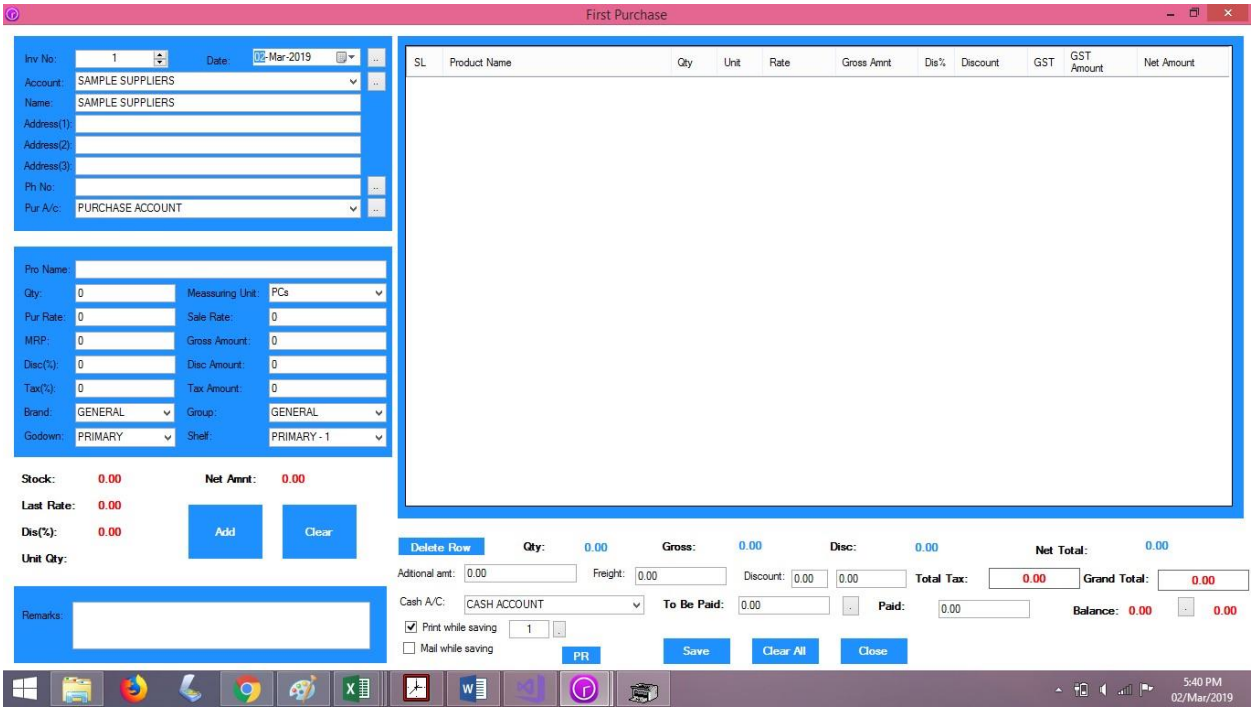

Operation of this form is like sales invoice form.First you want to select date then supplier account and then product entry.

2. First Purchase

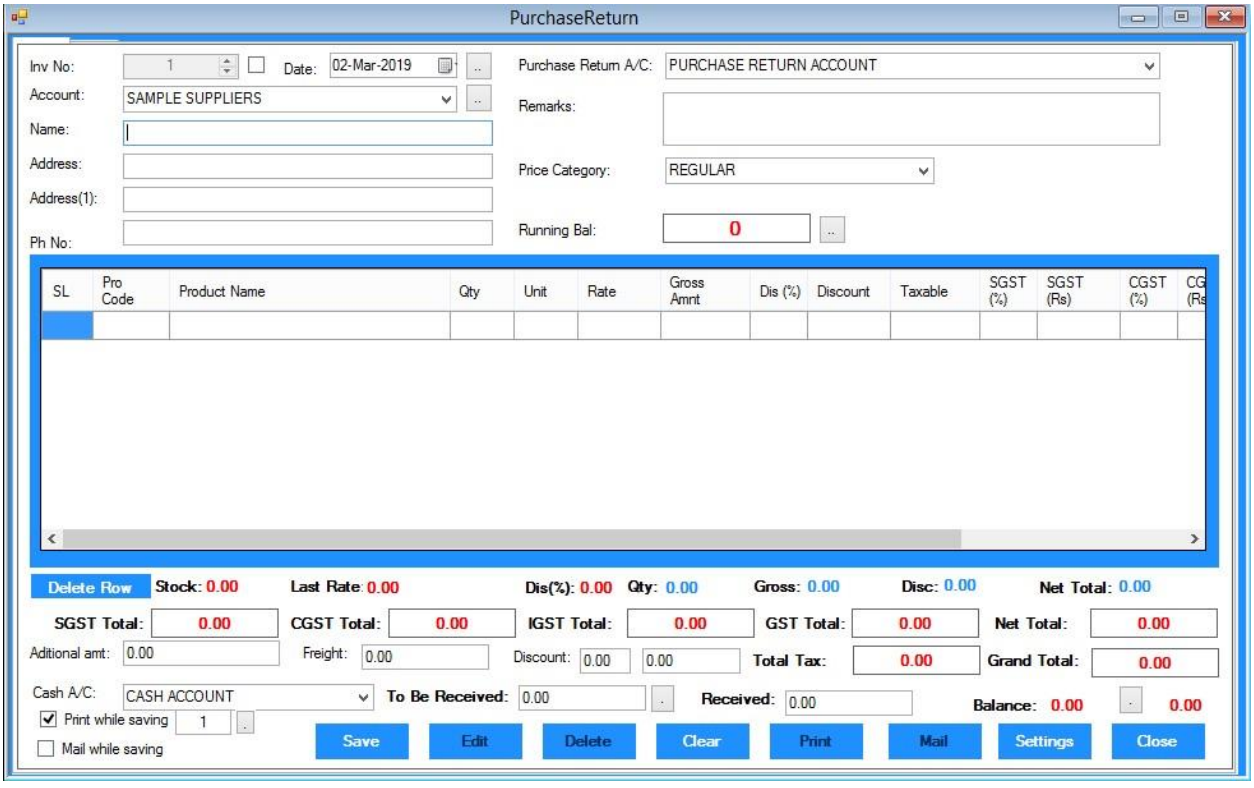

First purchase form is totally different one. This is useble when we start a business or a shop.

When we star a hardware item selling shop, there will be thousand category product from half inch screw to two thousand litter water tank. We have to create thousands of product groups, brands, suppler, units and products befor doing purchase entry. We can do all these steps by doing this entry. You have to only enter prodct, product group, brand and supplier in the concernd text boxes. The system will check the existence and if the item not created before system automatically create for us. This form will save our time very well.

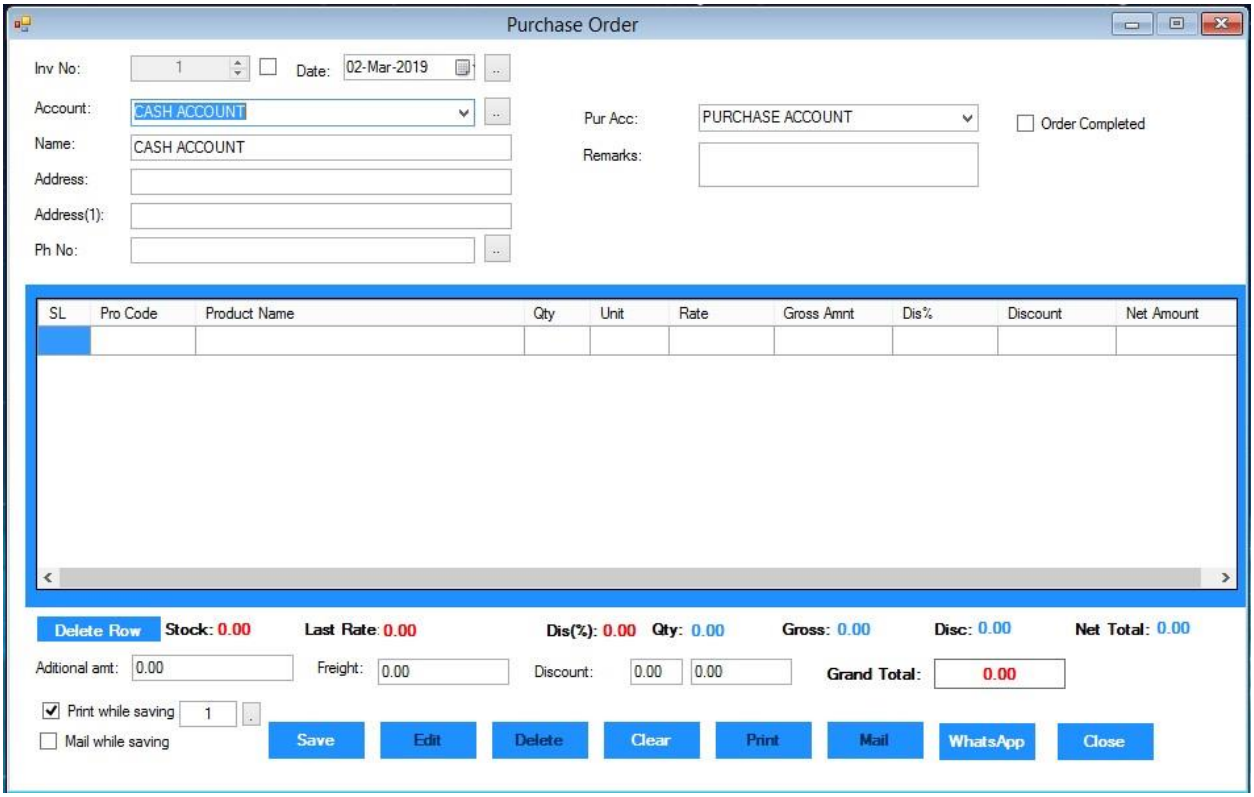

3. Purchase Return

This is like sales return form. When we have to return some product to the supplier, then we use this form.

4. Purchase Order

This is like sales order when we want to report our needs to our supplier we will enter details in this form and handover to the concerned purchase department or directly to the supplier for make purchase

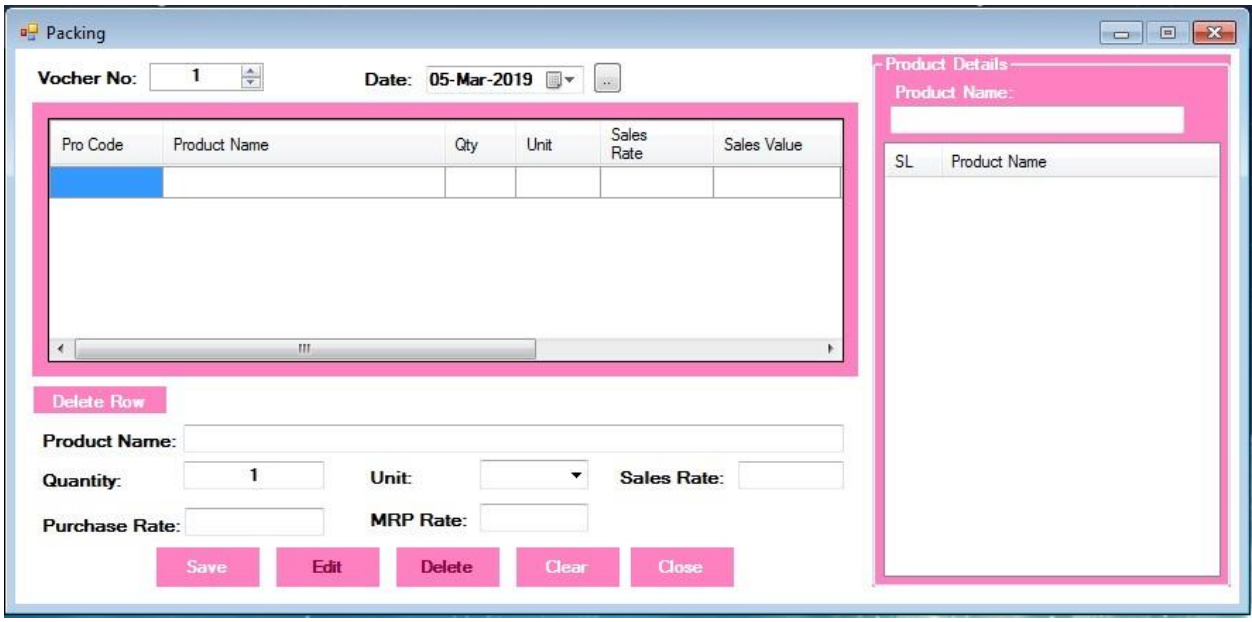

Inventory

If your firm has dealings with inventory, then this section is unavoidable.

1. Paking

This for manufacturing firms. In the manufacturing firm creating one finished product from two or more raw material. After

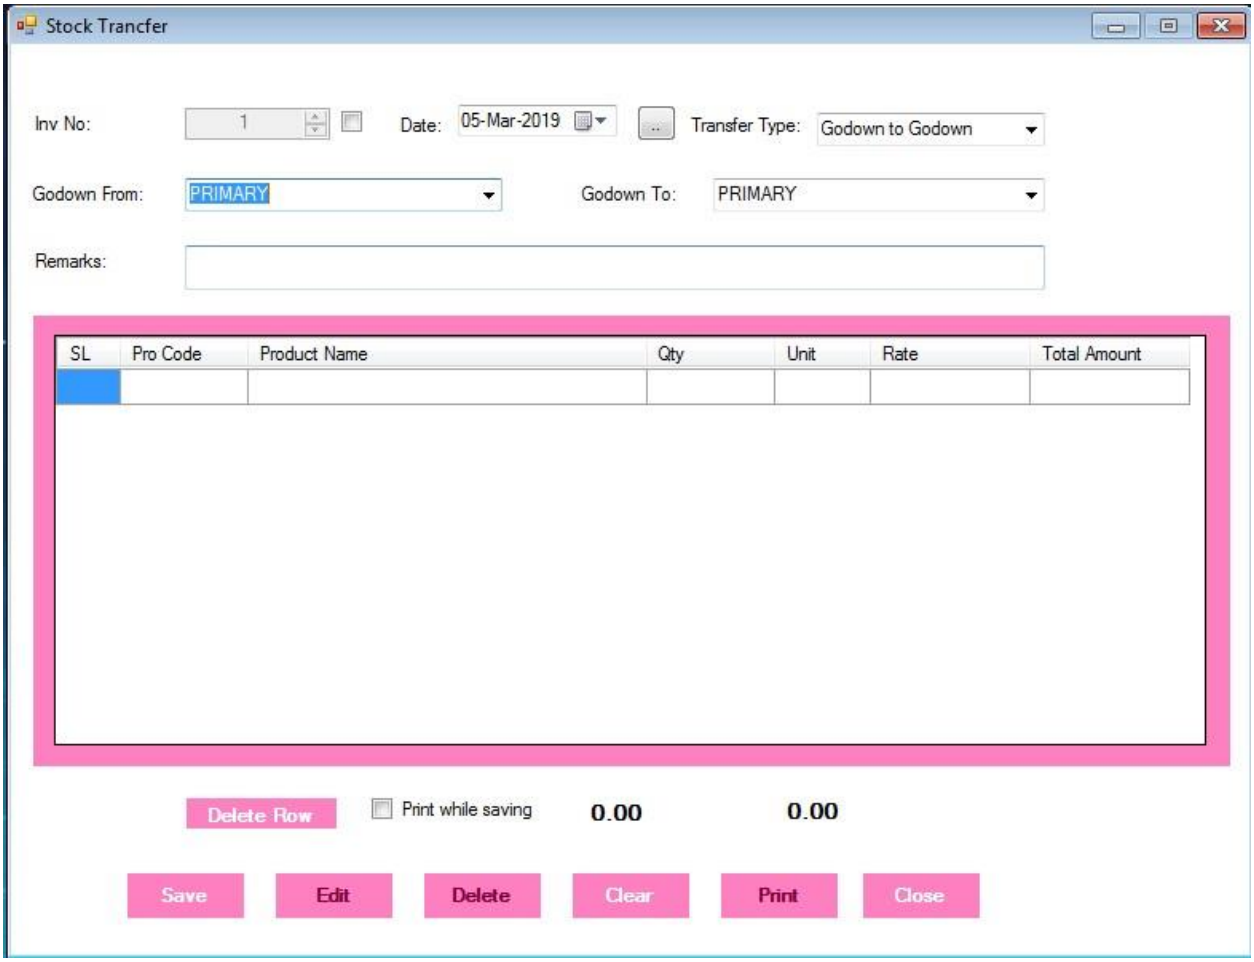

selecting date of packing we have to mention raw materials and their quantity. You can see finished goods list in the right side. By selecting one product you can edit.

2. Stock Transfer

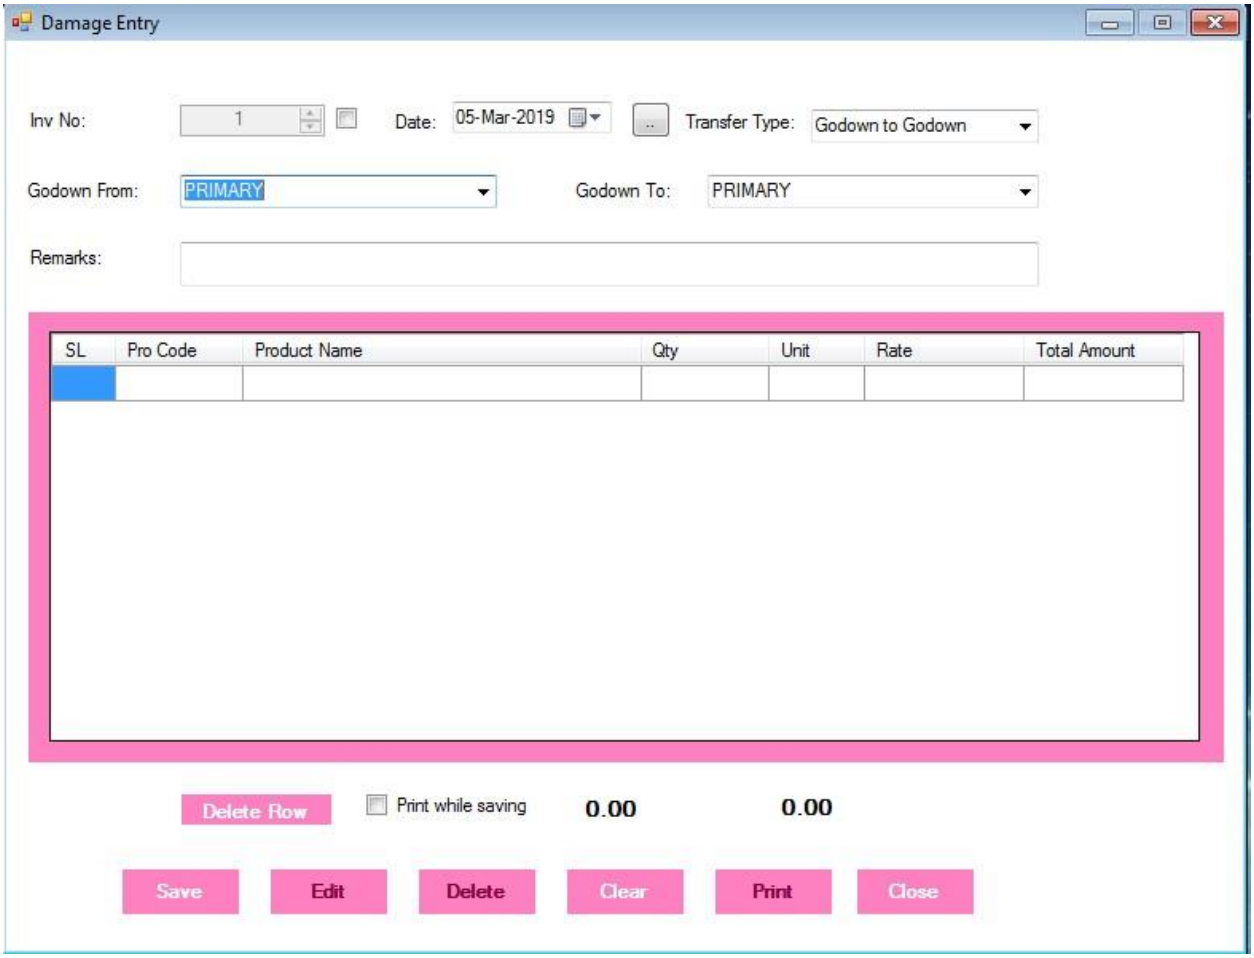

If your Company or shop have one more warehouse and want to transfer some product from one warehouse to another, then you can use this window.

First you have to select transfer date, then type of transfer and from godown and to godown. Lastly you want add products to be transferred.

3. Damage Entry

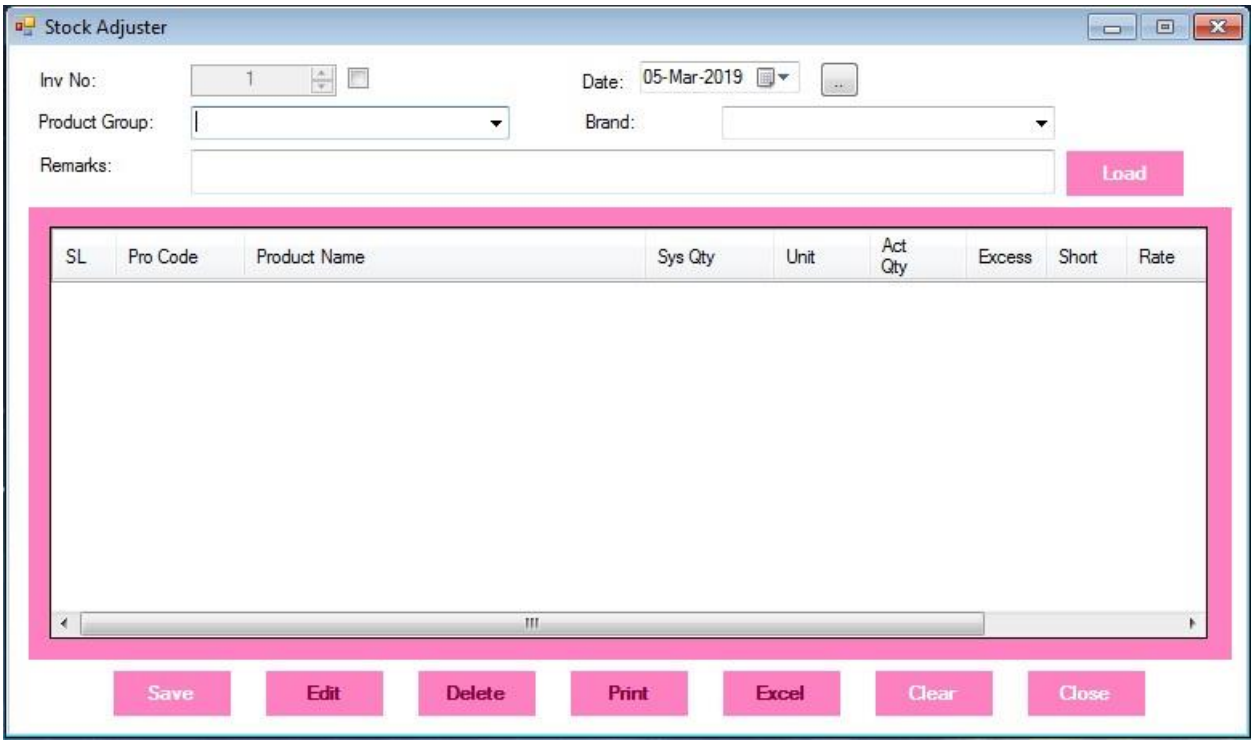

The damage entry is just like stock transfer. Here we select primary godown as from godown and to godown is damagestock godown.

4. Stock Adjuster

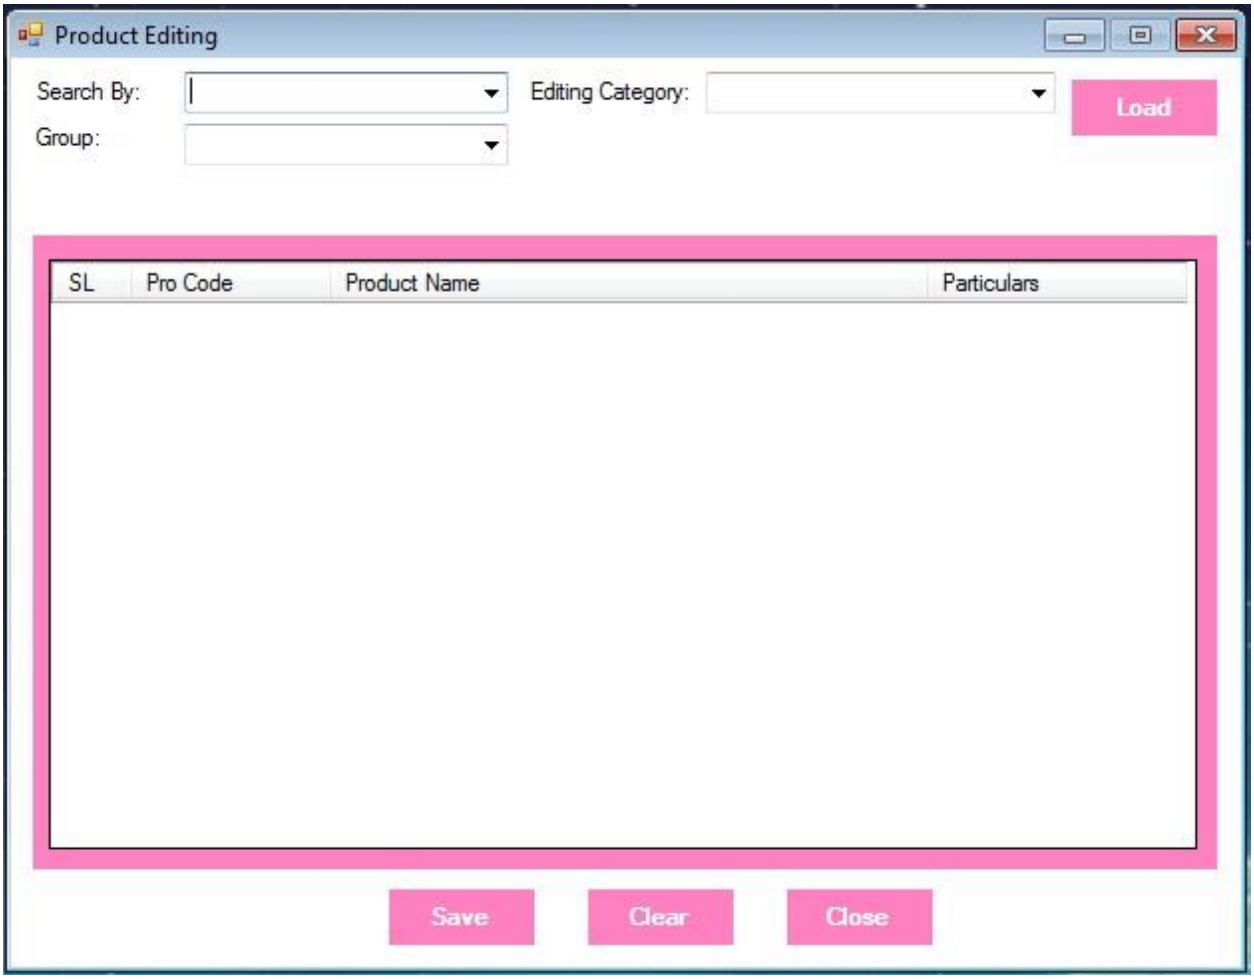

This window used to adjust the stock. In all firm, they will take physical stock on month end closing. And will find out some difference with system stock. In this circumstances this will help.

If you want to adjust a particular product group or particular brand, then you can select or if you want to adjust the stock of all items, you want to just click the load button. The all product will be shown on the list with system current stock. Then you have to enter the physical stock

Product Editing.

This window is for editing product group, brand and other specifications of products bulky

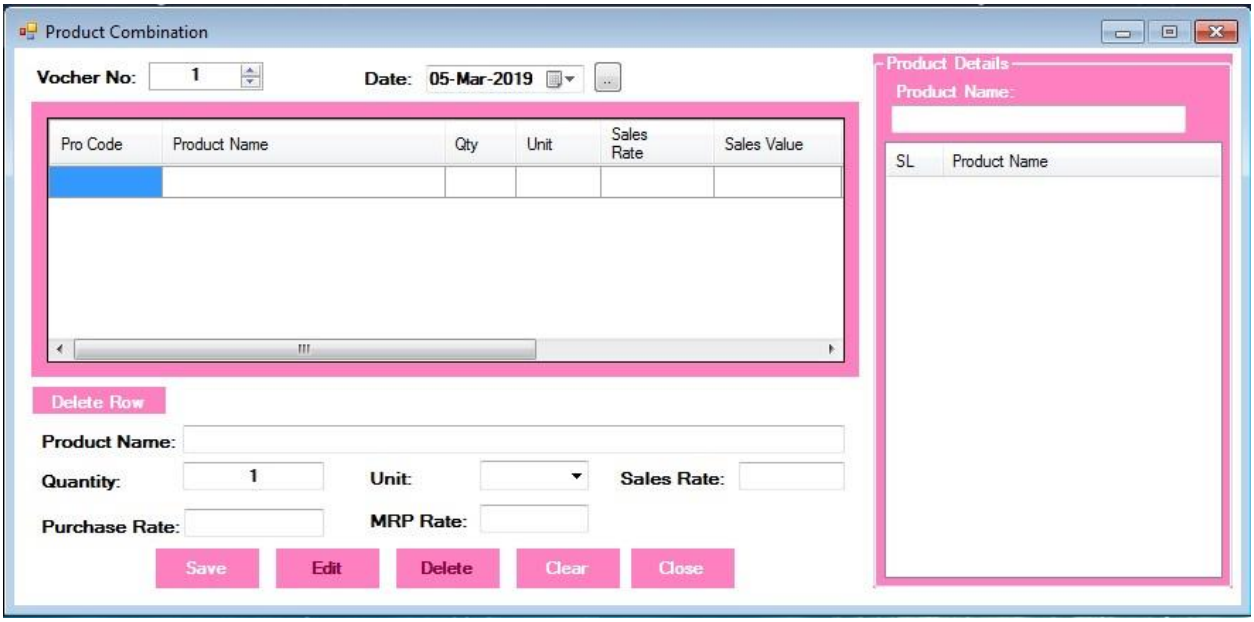

Product Combination.

This is very important one as some time you want to combine one or more product. In the following example, you can understand the use of this form.

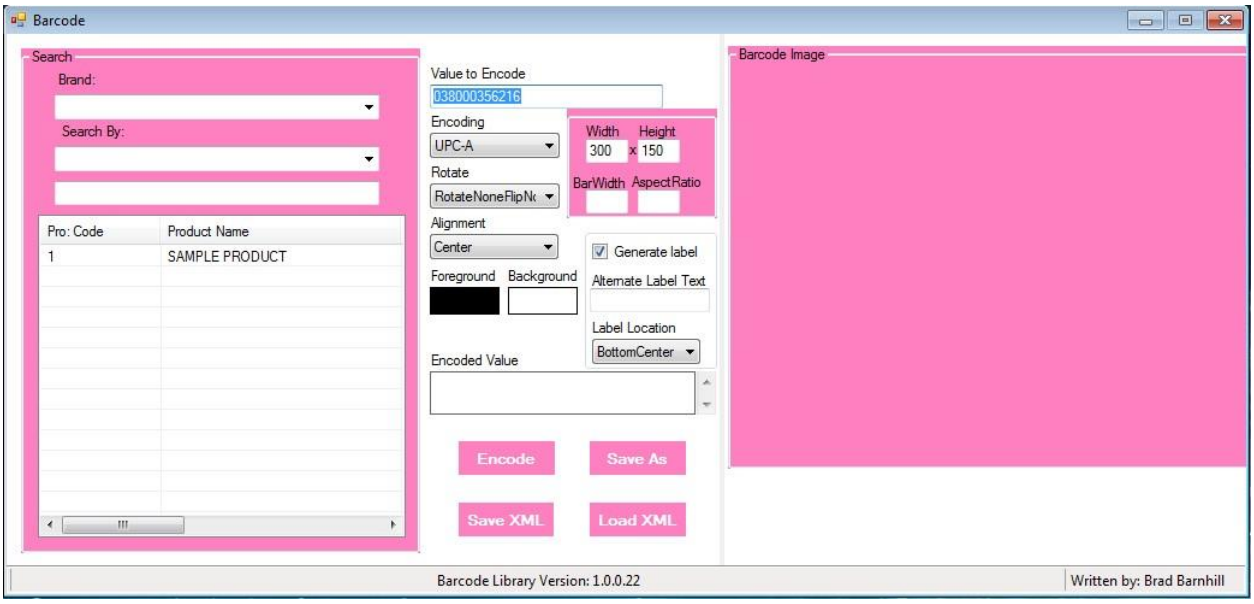

In hardware shop you can see mortice lock set. This included mortice lock, pair of mortice handles and screw. Sometimes they want to buy handles only or lock only.

Here we want combination of these items. When we sale set stock will reduce from each item included in combination. When we sale separately, stock will reduce separately.

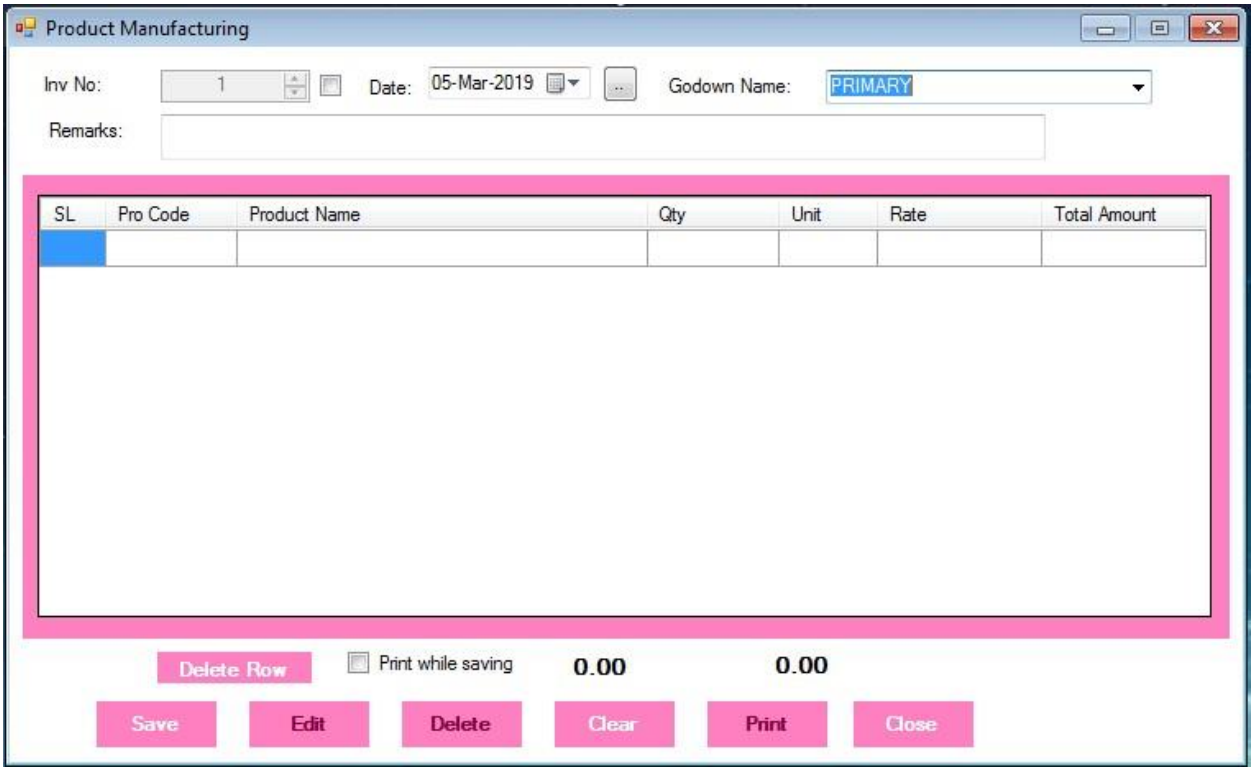

7. Barcode

This window is used to print barcode of the product in every popular format.

8. Product Manufacturing

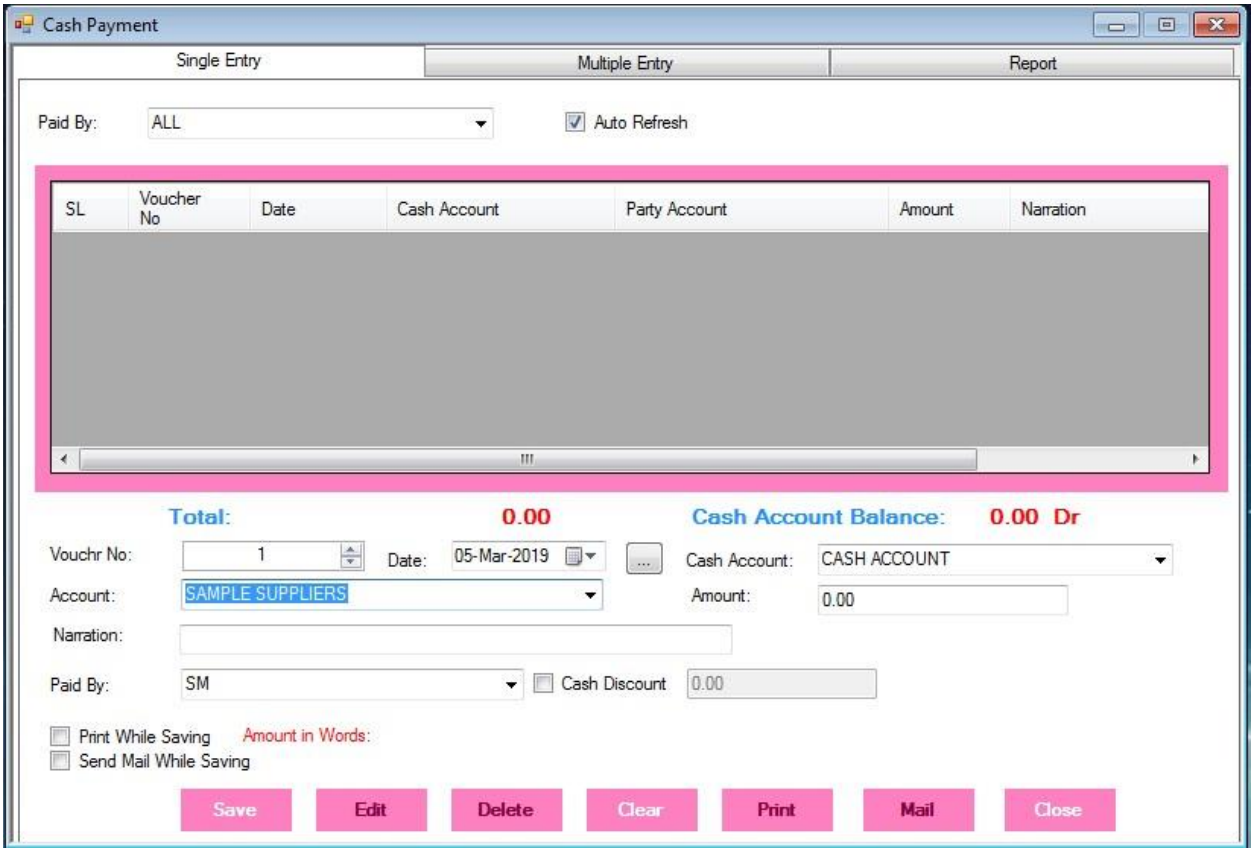

This window is used to enter product manufacturing. Select date and godown firstly then enter product in product name colomn of the Datagridview. And lastly press save button.

Account

Every firm with inventory and non-inventory want accounts so this section is very important. Under this section we are recording cash and bank payment with receipt. And also records cheque payment and receipt entries and journal entries.

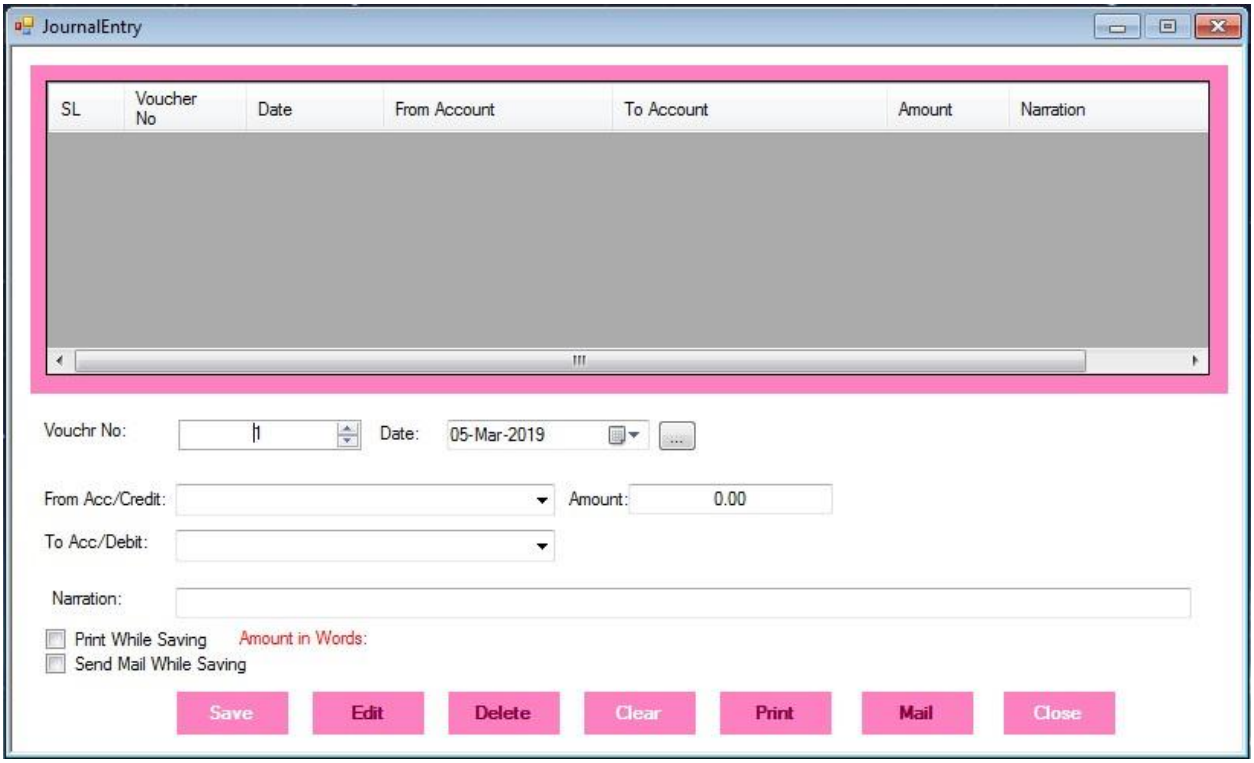

1. Cash Payment

2. Cash Receipt

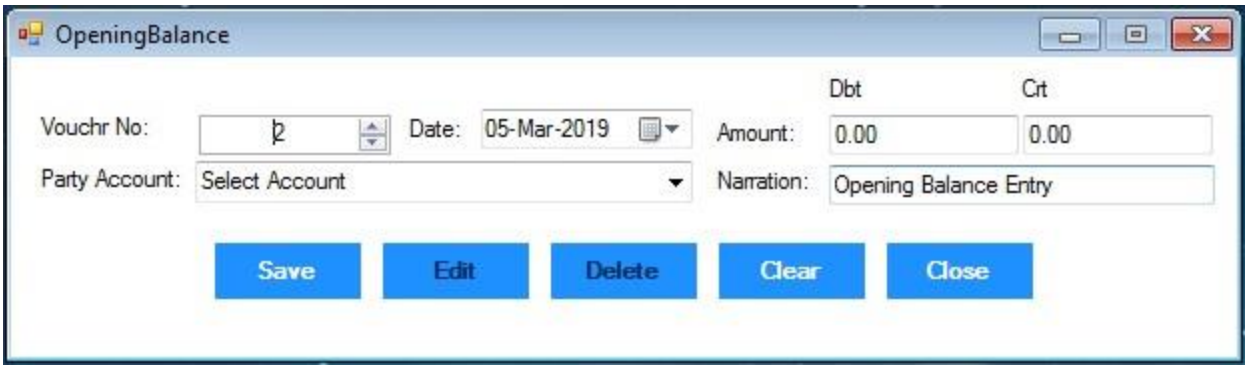

3. Journal Entry

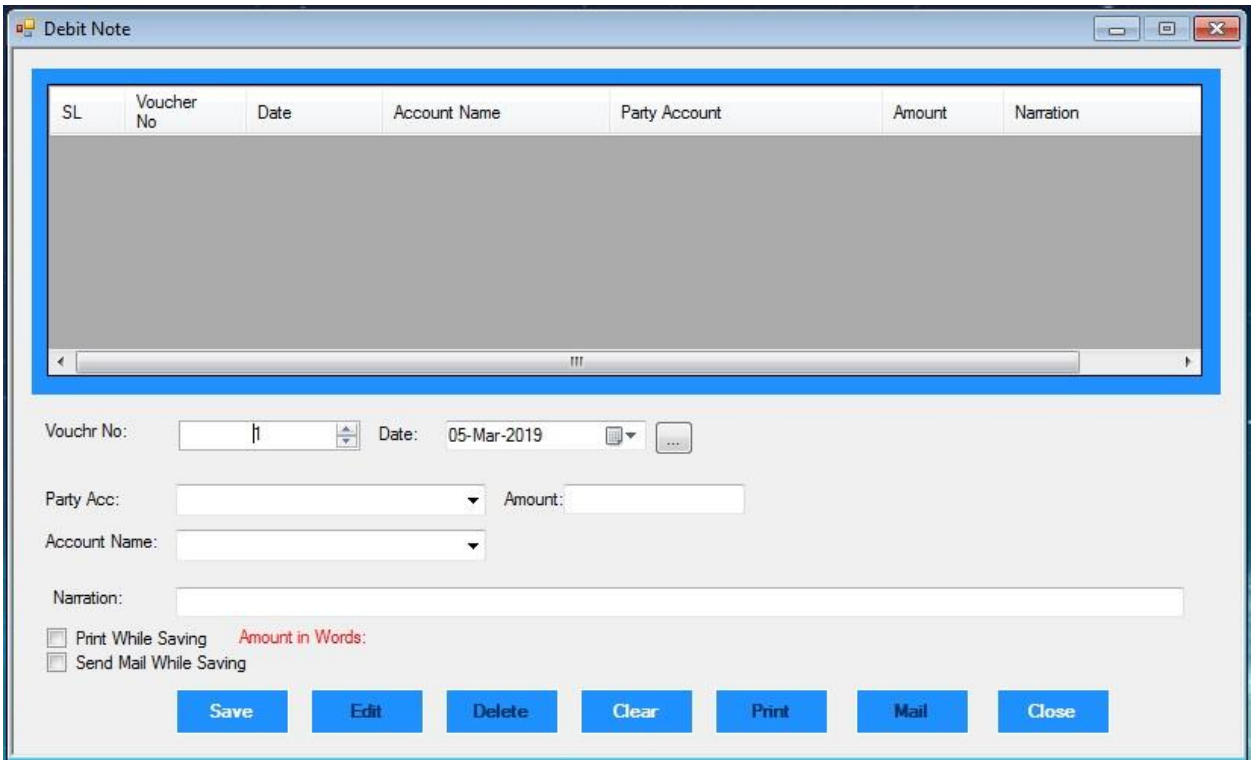

4. Opening Balance Entry

When we enter a account entry, we have an option to mention the opening balance. To enter the opening balance we can also use this window.

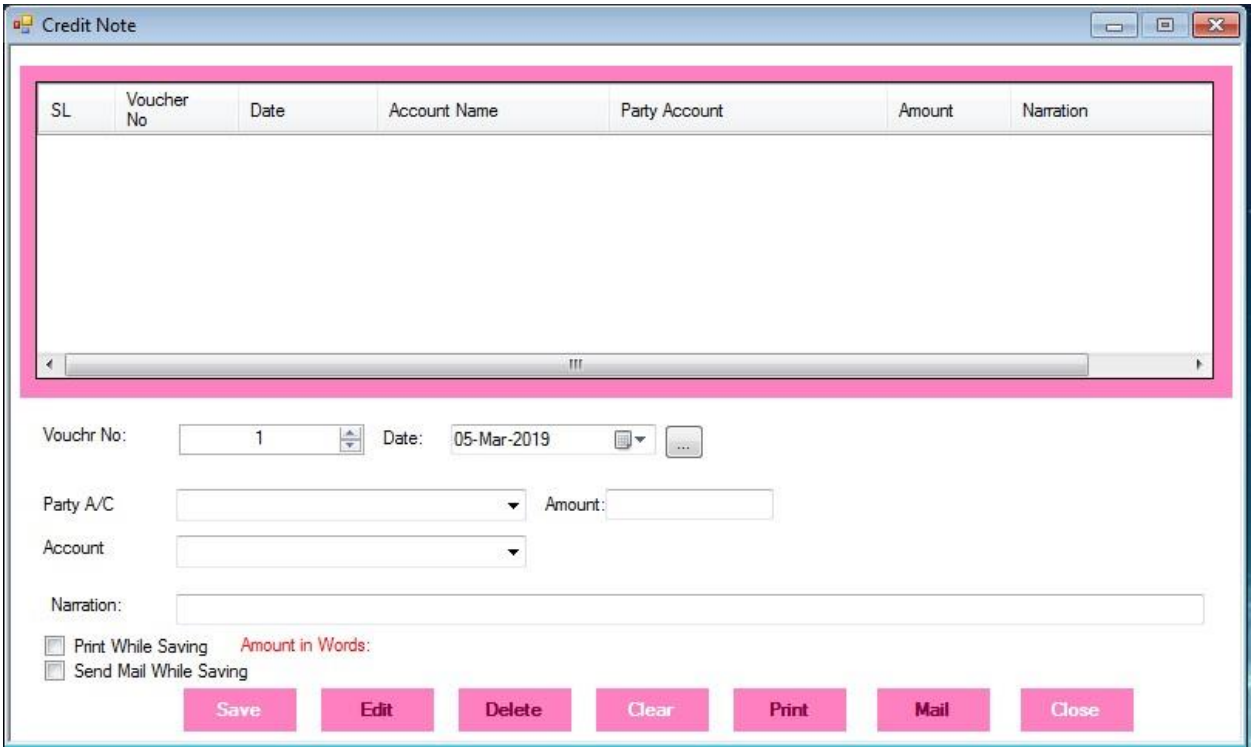

5. Debit Note

This is used to record debite note entry like cash discount while payment of credit.

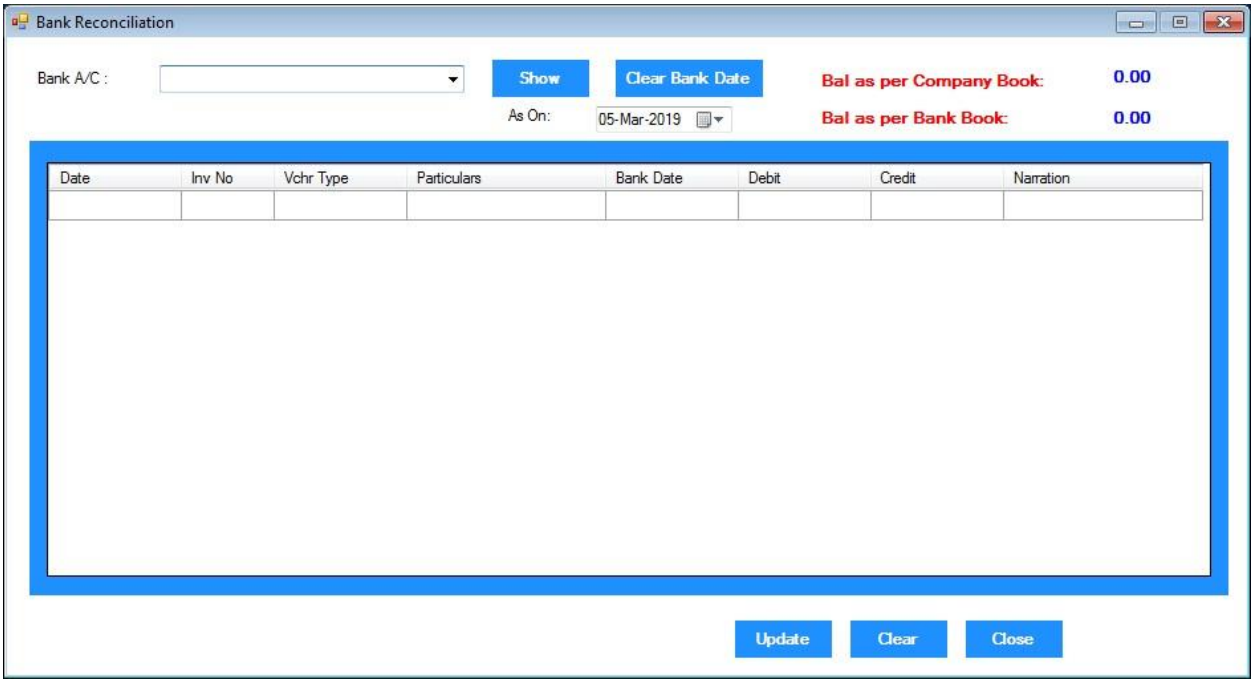

6. Credit Note

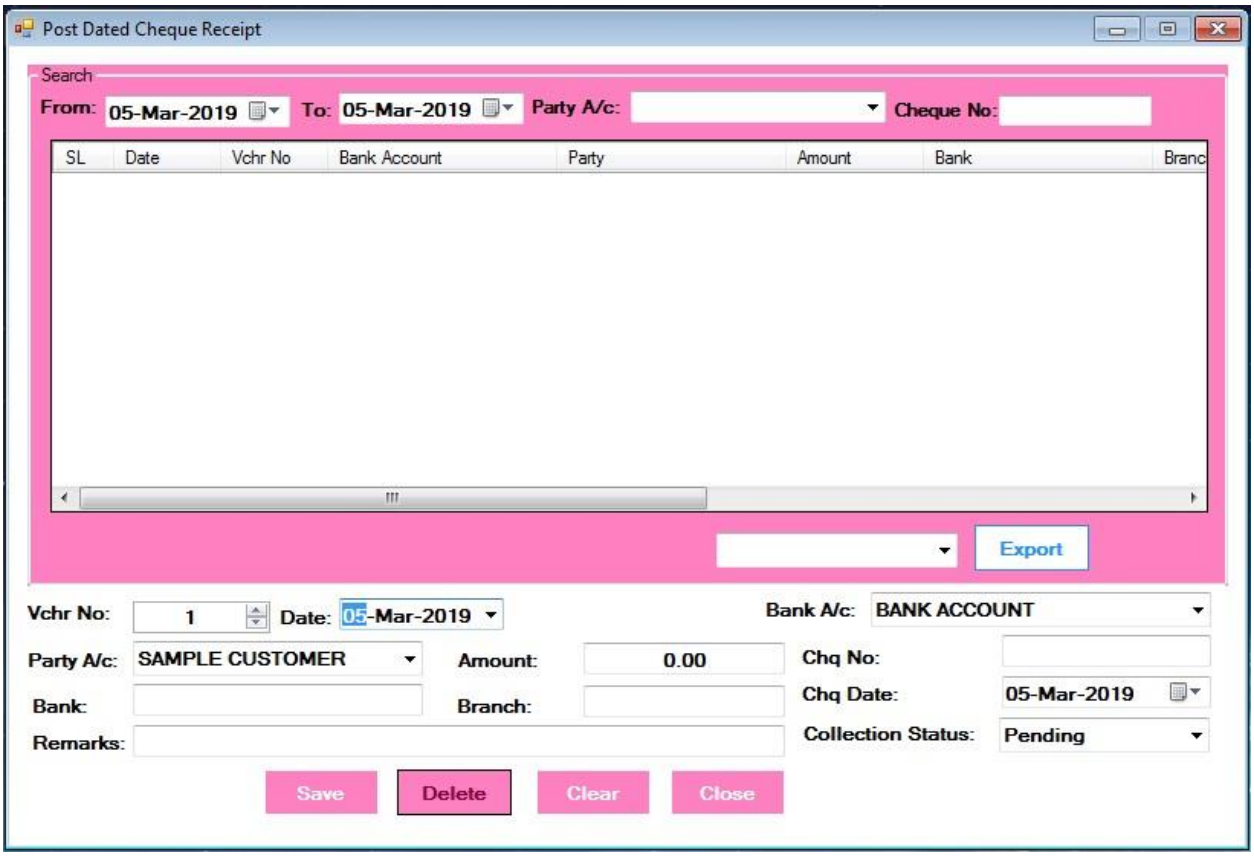

7. Bank Reconcilation

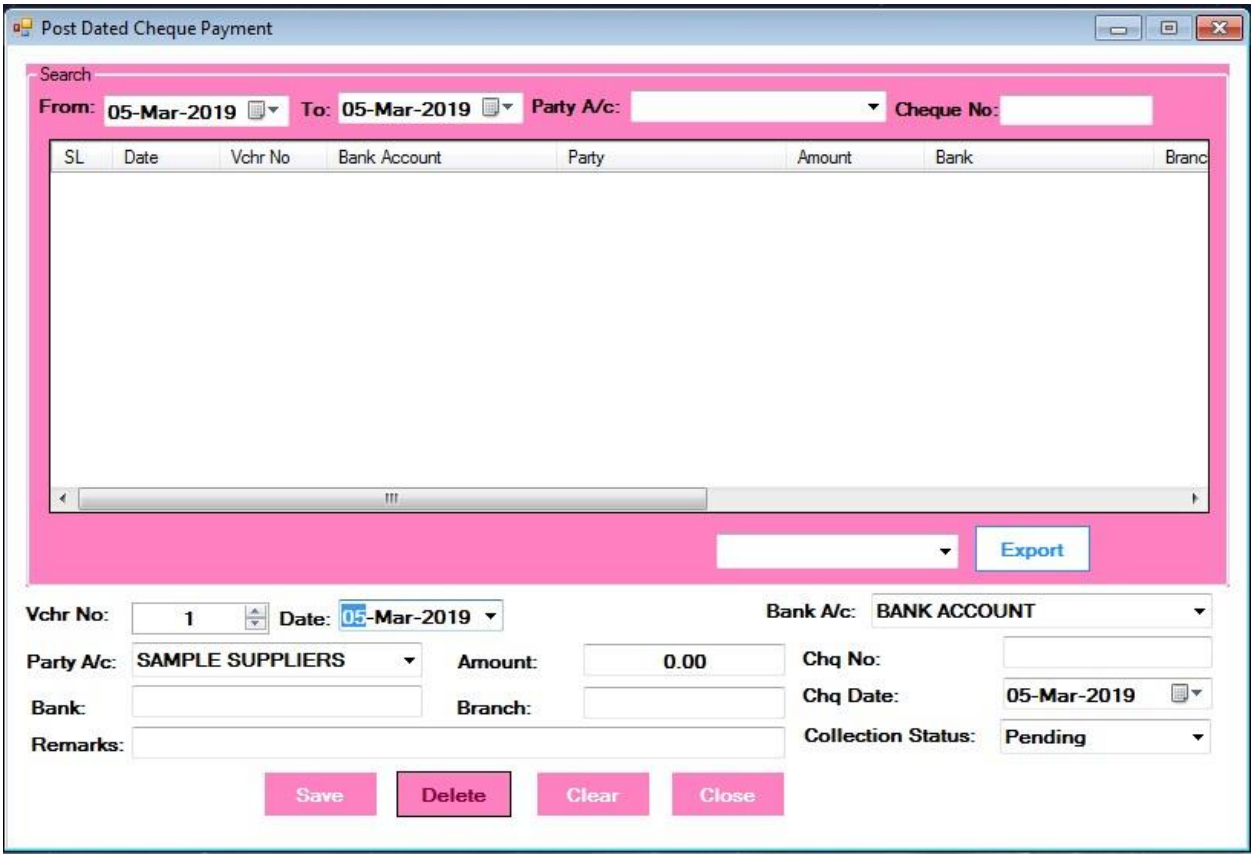

This for reconcile the bank entry with real date of bank transactions. As here we change date only with date shown in bank statement.

8. Postdated Checque Receipt

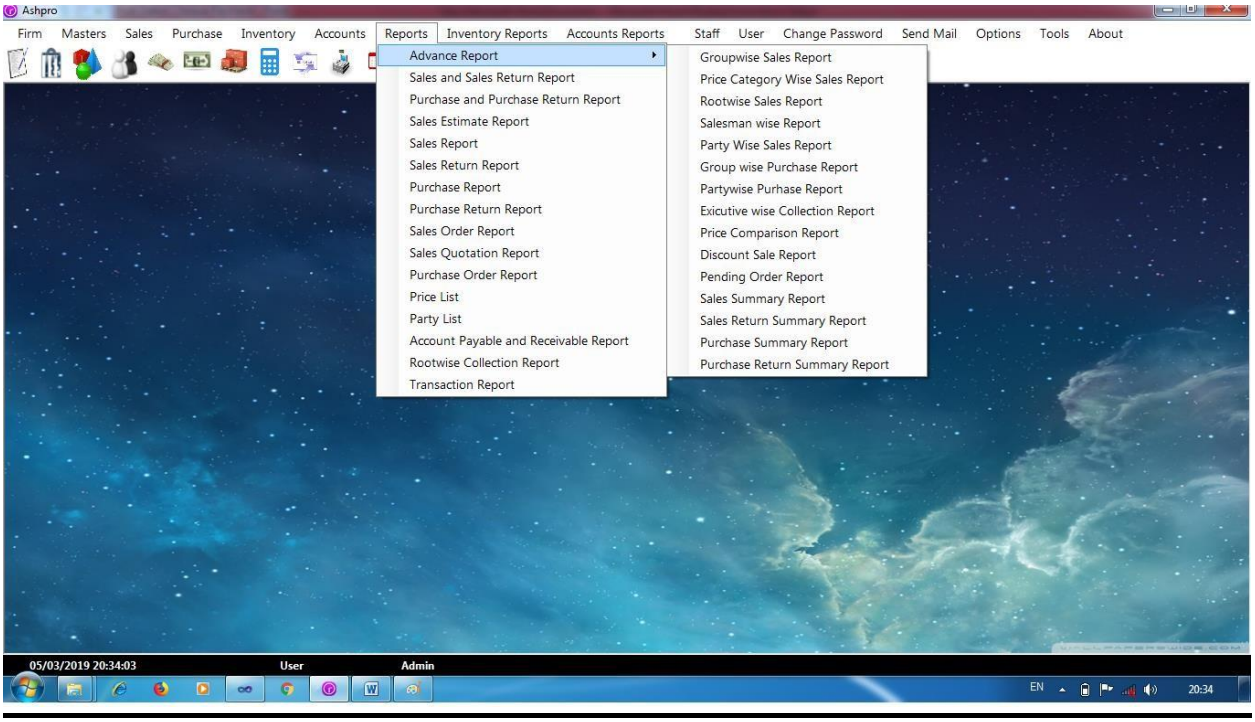

9. Postdated Cheque Payment

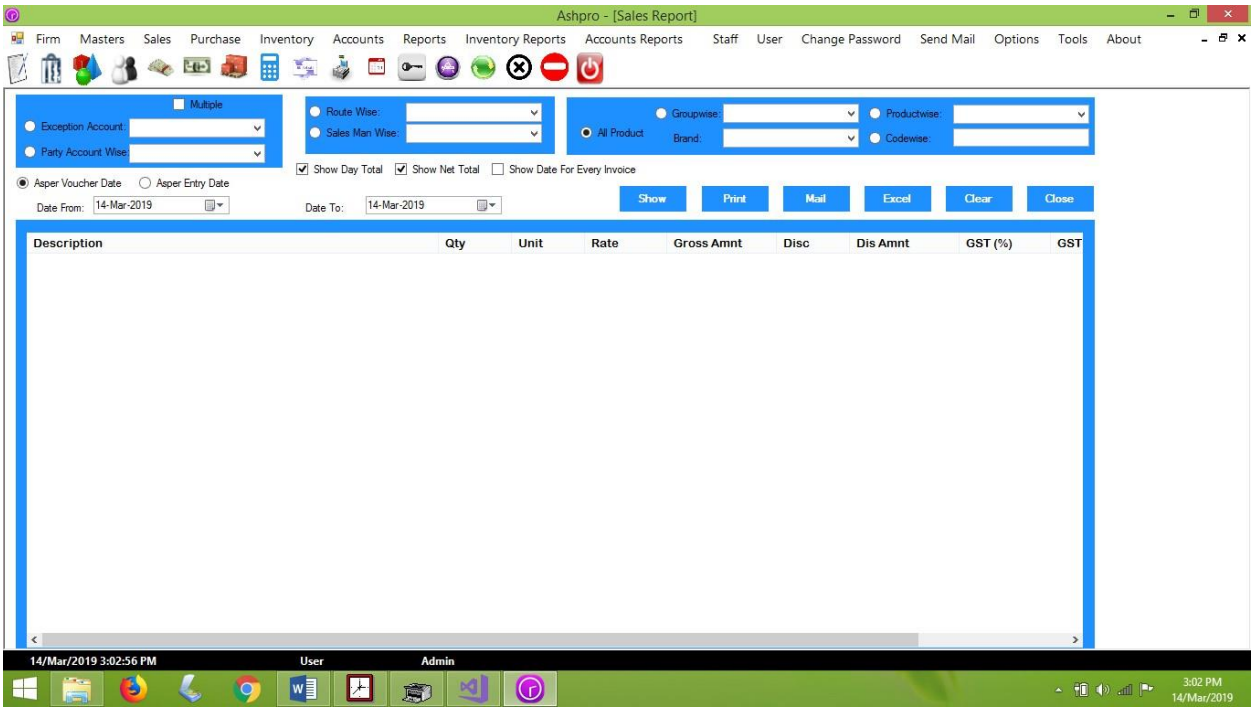

Reports

Reports are very important. By reports we can understand the sales purchase and profit of the firm for some periods.

Under this section we can generate sales reports, sales return report, purchase report, purchase return report, sales order report, sales quotation reports and party list report. And also there are many tipe reports as essential for a business firm. You can see in the below picture.

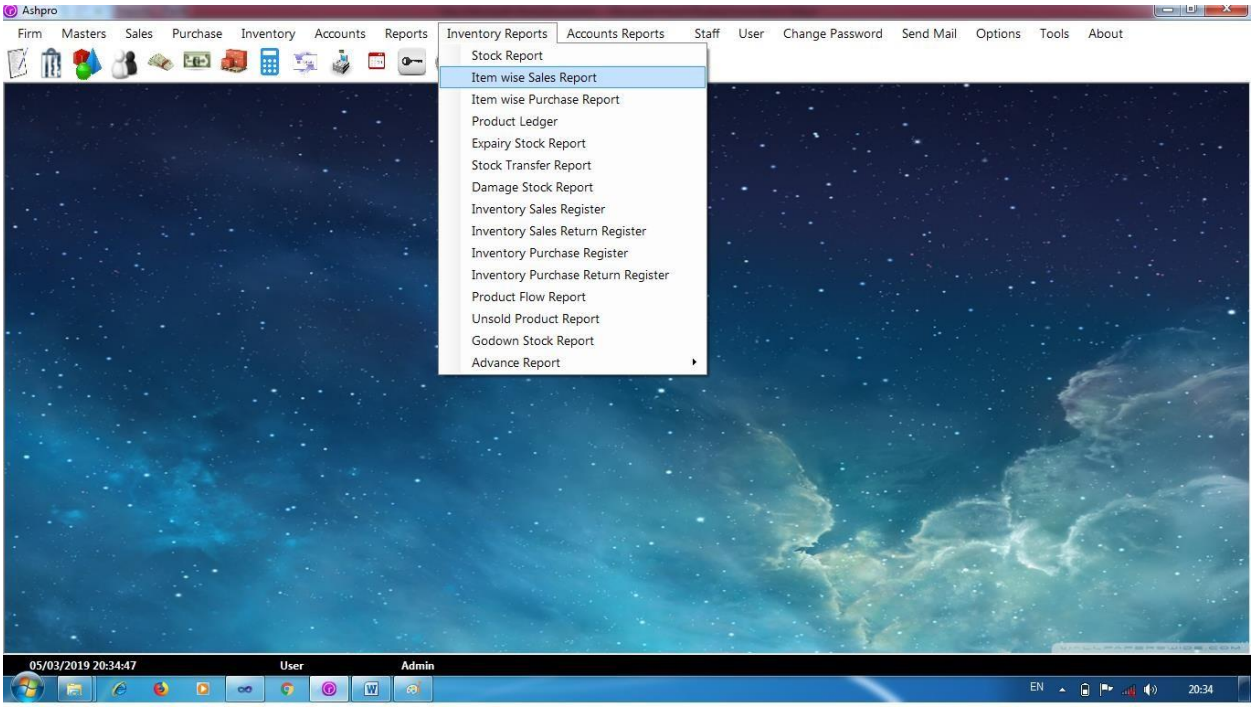

How can generate a report…? There is no complexity in this and you don't want any skill. If you want sales report for certain period, just select from date and to date and press Show button. You can see the report.

You can mail the report in PDF format or print. And you can save the report in the system in Microst excel sheet.

Inventory Reports

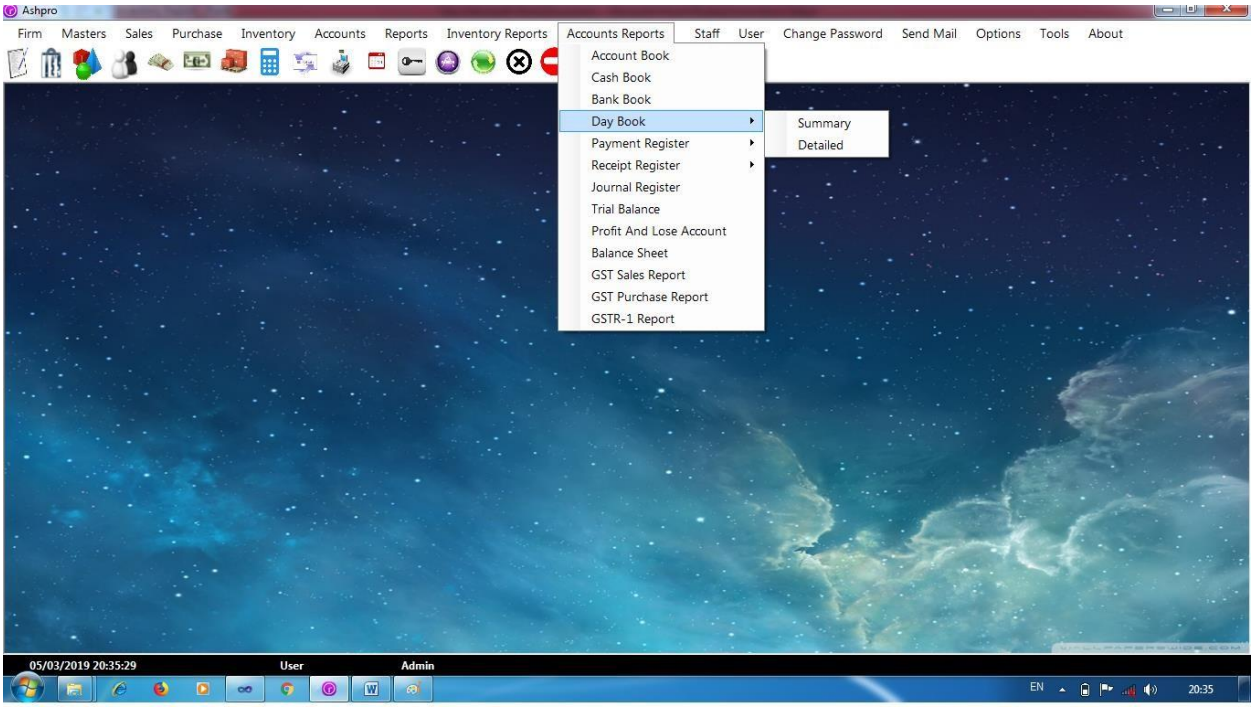

In this section you can take inventory related reports like stock report, price list, product flow report and item wise sales report.

Accounts Report

This is very important section. From here we generate main reports like balance sheet, profit and loss account, ledger reports, transaction reports, cash payment reports and csh receipt report.

The process of report generation is very simple so I didn't show any picture of the same. You can just test in the demo of application.

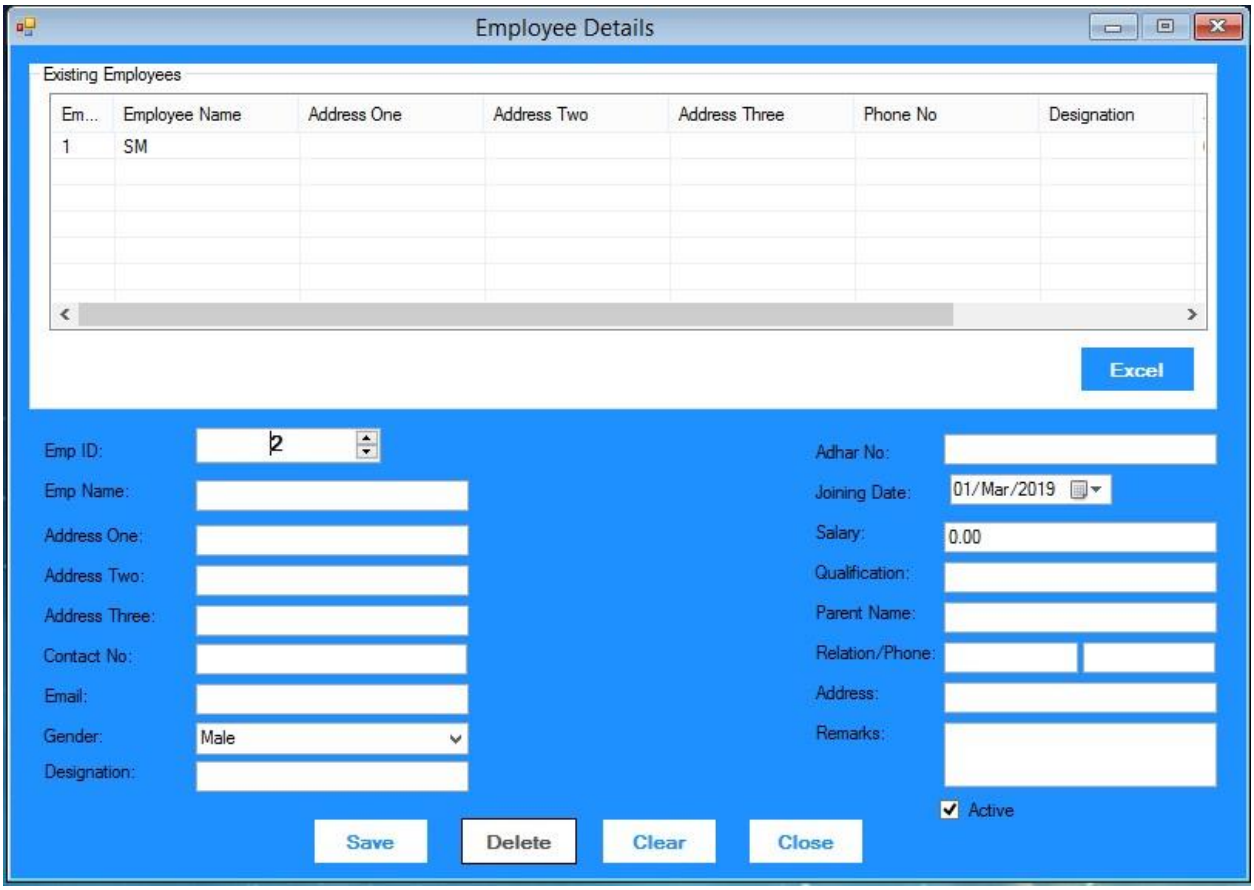

Staff

Under this section we can see forms related to employees.

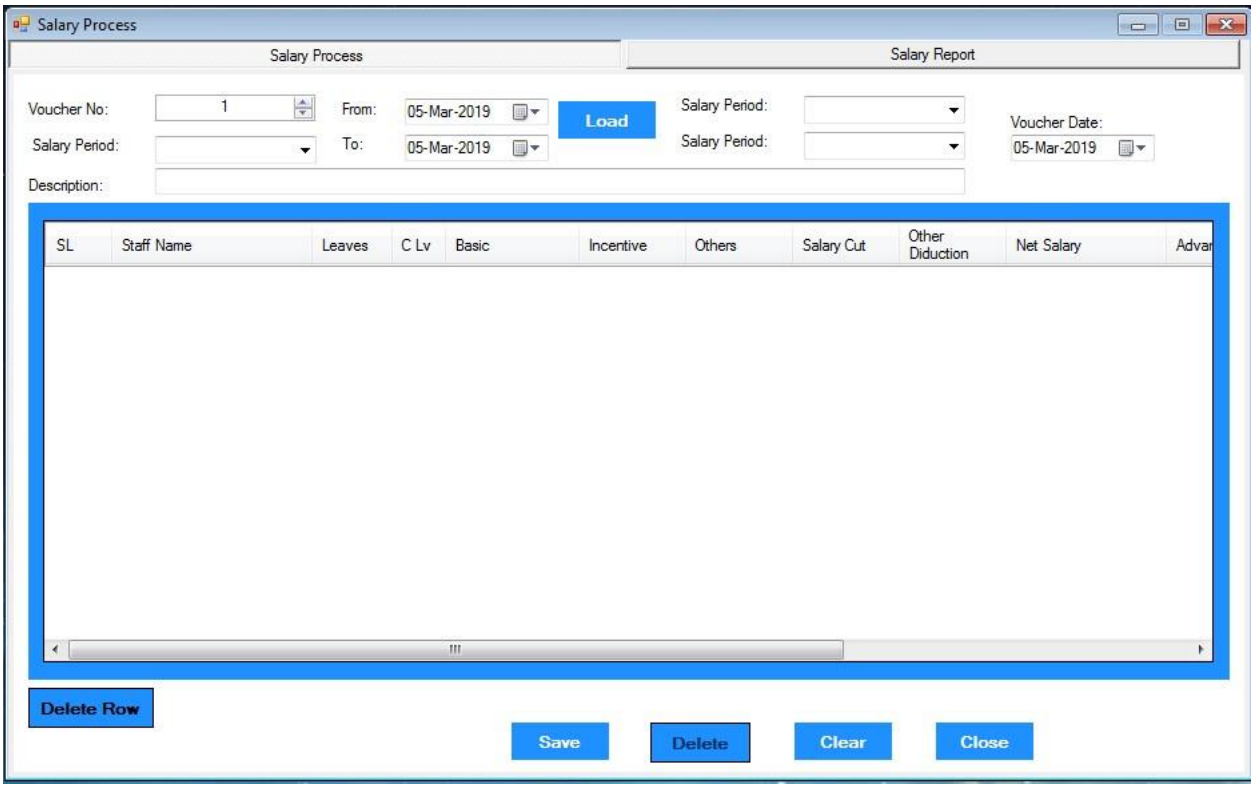

1. Staff Registration

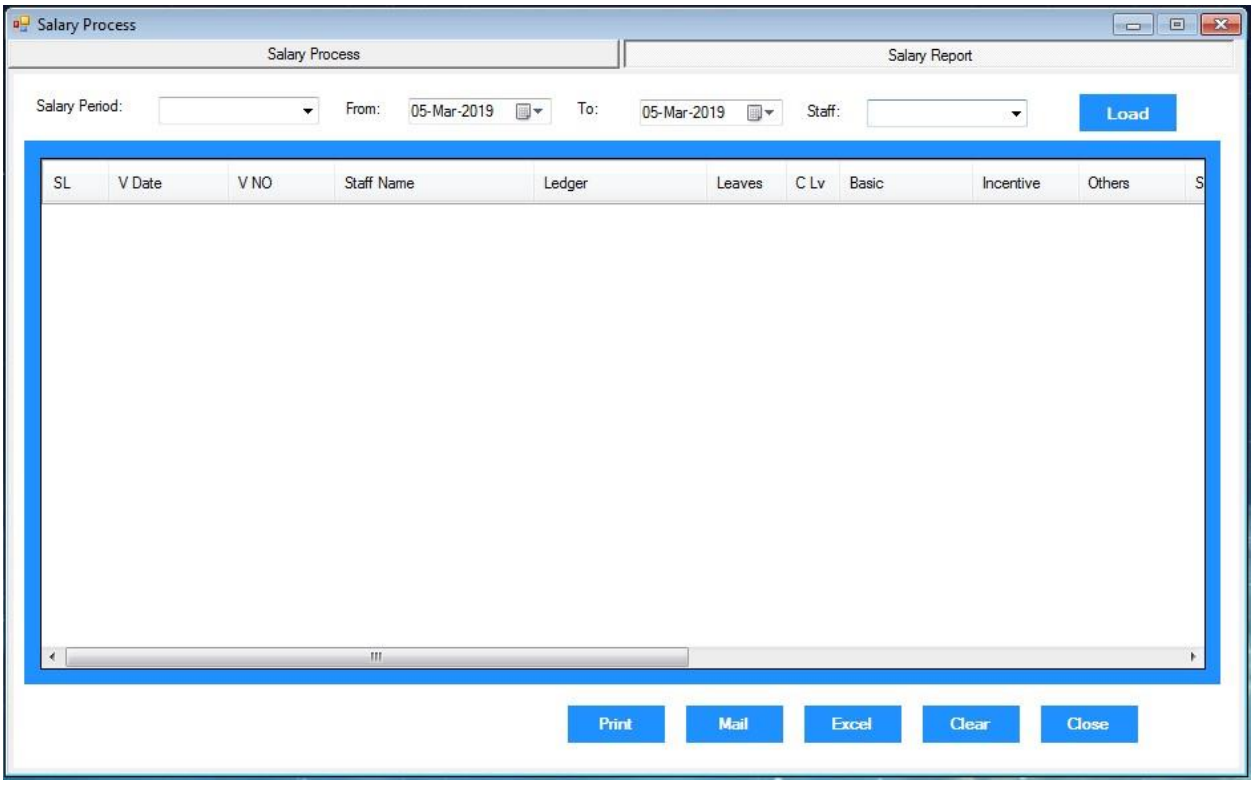

We have seen in the master section as detailed.

2. Salary Process

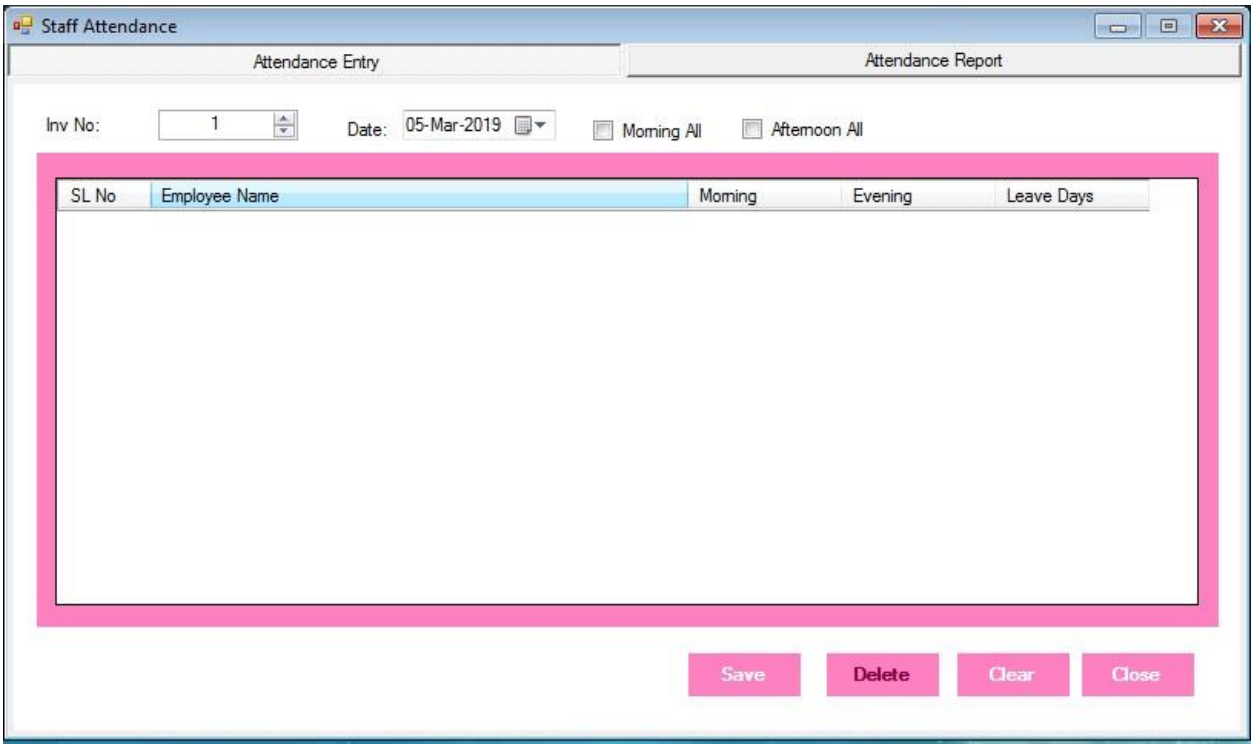

By this for we can calculate salary of the employee. And take report. Please note this feature is not available in the demo application.

Under this section we can create new user and fix his role and previlages. 1. User Role and Previlage

2. Create User

Nagadan ERP User Manual

I think by reading this user manual of application you can get ideas of our application. By installing our you can test the availability of this forms. And understand the complexity of the project. Certainly this is a valuable one. There are many other features included like Print design, database changing, Mail sending from the application, reminder and calendar.

I know this is very short. If you have any doubt, please chat with me my WhatsApp number is +8801303115294 or email to me.

I am sure, if you try well, you can start a good software firm in you region. Or if you are a student you can study well and make project for your college. Good luck and thank you for reading.

The End
